Poplar will undoubtedly bring a higher price than during the season of 1917. If there can be said to be any particular demand for any grade of wood this season it will be for the poplar wood. The purchaser may look askance at the farmer's spruce and fir, but he will be found ready to take on the poplar.

The shipments of last season's wood to the States for May were not as extensive as had been hoped for. Secretary McAdoo of Washington, D.C., promised 1,000 cars for May shipment from points on the C.G.R. and C.P.R. He has delivered only half the number. It is not expected there will be any better results for June, and quantities of pulp will hang over another year.

Lumber Company will Build Power Plant

The St. Maurice Lumber Company are contemplating the construction of a new power plant at Les Forges Rapids. An engineering staff is now occupied, making levels, hydrography and surveys at Les Forges Rapids, on the St. Maurice River, ten miles north of Three Rivers, Que., for the St. Maurice Lumber Company. The purpose of the development of these falls is to supply electricity to a new pulp and paper mill. This company is contemplating locating at Three Rivers. The work is under the direction of Mr. Cobb; H. S. Ferguson, of New York, is consulting engineer.

If carried out the scheme will consist in the building of a concrete dam, monolithic type, which will raise the water level to some thirty feet. A conduit, a log slide, and power house will be built. By raising the water level the falls at La Gabelle will be submerged and the backwater will attain the level of Les Gres Falls. The latter power is the property of the Shawinigan Water & Power Company. The maximum discharge of the river at this site is estimated at 170,000 cubic feet a second, and the minimum 6,000 cubic feet a second.

Historic Business Comes into New Hands

An event of considerable importance in the business life of New Brunswick, and particularly in Kings County, is the retirement from the lumber, box and match manufacturing business of the G. & G. Flewelling Mfg. Co., Limited, of Hampton. Their interests have been purchased by Randolph & Baker, of St. John, but the purchasers have made no announcement of their plans, and Hampton village threatens to become a deserted village, as the mills formed the only industry and the chief means of livelihood for the people, giving employment to more than a hundred. The employees are scattering and finding work in other places.

The lack of raw materials in the vicinity is the cause of the company's decision to retire from the activities in which they were engaged, and no other manufacturing opportunity presented itself. The big lumber has been cleared off the lands within operating distance of the mills, and even the small stuff has gone the same way. The mills were established by Gilford Flewelling, who returned to his native province from Kentucky, where he had been engaged in railway construction, after the opening of the civil war. His woodworking factory prospered, matches were added to the output and later a box mill was started. Another sawmill was established at Perry's Point, and the business continued to grow until the limit of the natural resources of the district was reached.

To the Lumber Companies of Canada:

You have the Goods. Place your Lists with full particulars in our hands. We are in daily touch with all the Buyers in the United Kingdom.

PLEASE NOTE.—We pay cash against all documents, and take the whole of the Delcredere risk on Buyers.

CANADIAN WOOD PULP

**We are the
LARGEST
BRITISH
IMPORTERS
of Canadian
WOOD
PULP**

Canadian Wood Pulp is in great demand to-day, and every timber man should take advantage of the opportunity to add this profit to his business. A small Kraft Soda Mill is inexpensive, and will handle all the wood waste, slabs, bottoms, tops, etc., around the mill or yard. You can dispose of any quantity at good prices, or on long-term contracts, if desired. The previous sources of supply for the business have been cut off almost entirely, and Canadian business men can reap the benefit with little risk or investment.

A Handy and Valuable Pulpwood Chart

The accompanying chart, developed and copyrighted by the American Barking Drum Company, of Chicago, Ill., will doubtless be found of considerable technical value to pulp and paper makers.

The curve is based on actual measurement, made by the engineers of the above company of four-foot wood piled in an orderly manner.

For example: How many sticks of 6-inch wood are there in a cord? Find the "6" at the bottom of the chart and follow the vertical line upward until it crosses the curve. Opposite this point of intersection is the figure "130," which is the answer. That is, 130 sticks of 6-inch wood, 4 feet long, are required to make up an average cord.

The following table will be found useful for determining the number of 13-foot logs per cord and the cubic feet of wood per cord, wood in all instances being piled in an orderly way:

Number of 13-foot Logs of Different Diameters Per Cord—Sticks Piled in an Orderly Manner

	Logs.
5 in. diameter x 13 ft.	34
6 in. diameter x 13 ft.	27
7 in. diameter x 13 ft.	22

8 in. diameter x 13 ft.	18
9 in. diameter x 13 ft.	17
10 in. diameter x 13 ft.	15
11 in. diameter x 13 ft.	12
12 in. diameter x 13 ft.	10
13 in. diameter x 13 ft.	9
14 in. diameter x 13 ft.	7
15 in. diameter x 13 ft.	6
16 in. diameter x 13 ft.	5½
17 in. diameter x 13 ft.	5

Cubic Feet of Solid Wood Per Cord, Piled in an Orderly Manner
Diameter at small end.

Length of sticks.	Over 5.5 in.	5.5 in. to 2.5 in.	2.5 in. to 1 ft.
Feet.	Cubic feet.	Cubic feet.	Cubic feet.
2	91	84	65
4	89	82	64
8	84	77	59
12	78	71	54

The American Barking Drum Company advise that they will gladly furnish a copy of this chart to any responsible man connected with a pulp or paper mill who may be interested.

EDGINGS

Ontario

L. S. Barrand, Pembroke, Ont., recently lost his planing mill by fire. The loss is estimated at about \$13,000, with some insurance.

Ross Staples recently lost his sawmill by fire at Indian River, Ont., Peterboro County. The loss was quite serious and there was no insurance.

The Wm. Davies Company, Limited, 521 Front Street East, Toronto will shortly commence work on the erection of a wooden box factory on Front Street East.

W. H. Hutchinson, Goderich, Ont., is erecting a shipbuilding plant to cost about \$50,000. The building will be one storey, 60 x 125, reinforced concrete construction, maple and concrete floors.

Frank Rounds, Main Street, Welland, Ont., will rebuild his lumber warehouse, at a cost of \$2,500, which was recently destroyed by fire. The new building will be one storey, sheet metal and frame construction.

The barges G. K. Jackson and Isabella Sands and the tug Crawford, loaded with 546,778 feet of hardwood lumber, have left Bay City for Southampton, Ont. It is said to be the largest single lumber shipment in the history of the port.

The Canada Pulpwood Exporters Ltd., have been incorporated, with head office at Toronto, Ont., and capital stock of \$24,000, to carry on business as manufacturers of and dealers in lumber, bark, wood, pulpwood and pulp products of all kinds. Among those interested are A. C. Brown and W. J. Kelly.

The Guelph Paper Box Company, Limited, has been incorporated, with head office at Guelph, Ont., and capital stock of \$40,000, to carry on business among other things as manufacturers and dealers in wood and lumber of all kinds; barrels, cases, pulp, etc. The provisional directors are J. S. Small, A. A. Buchner and W. E. Buckingham.

The French Bay Lumber Company, Limited, has been incorporated, with head office at Sault Ste. Marie, Ont., and capital stock of \$150,000, to carry on business as manufacturers of and dealers in logs, lumber, timber, wood and pulp and all articles into the manufacture of which wood enters. The provisional directors are J. P. Walsh, C. J. McLachlin and E. E. Purvis.

The Caswell Lumber Company, Limited, has been incorporated, with head office at Sudbury, Ont., and capital stock of \$40,000, to carry on business as timber merchants, sawmill proprietors and timber growers; to manufacture and deal in timber and lumber of all kinds. The provisional directors are G. Caswell, A. J. Jordan, G. J. Valin and A. J. Manley, all of Sudbury, Ont.

Commissioner Pringle states that there is no likelihood of the price of newsprint in Canada being immediately fixed at \$3.10 per hundred as the result of the fixing of this price in the United States. He added recently that the present figure will hold till July 1, when it may be extended till the end of August, by which time investigation as to the cost of production will be complete. The price will then be definitely decided.

A contract for the construction of a 3,750-ton merchant vessel has been awarded to the Collingwood Shipbuilding Company by the Department of Marine. It is the second contract let to that company since the government announced its shipbuilding policy. The Marine Department has placed in all contracts for ten vessels. It is now engaged in the preparation of plans for the 10,000-ton ships to be built at the new Halifax shipyard.

In a recent serious fire which took place in Pembroke, Ont., while the garage of the Thomas Pink Company, Limited, was destroyed, no harm whatever was done to the manufacturing department. The garage was altogether separate from the manufacturing plant and there has been no interruption to the activities of the firm in the matter of turning out lumbering and driving tools. This is pleasing news to the many friends and customers of the firm.

The Excelsior and Wood Wool Company, Limited, has been incorporated, with head office at Toronto, Ont., and capital stock of \$10,000, to carry on business as manufacturers of and dealers in excelsior, wood wool, lumber, woodenware and wood products of all kinds; to buy, own, hold, sell and deal in timber limits, timber lands and products of the forest, and to manufacture any article in the making of which timber or wood is required or can be utilized. The provisional directors are R. H. Greer, G. L. Smith, and G. R. Forneret.

The offices of Ed. Clark and Sons, Limited, Toronto, have been removed from the Stair Building, to Rooms 507, 508 and 509 Bank of Hamilton Building, in the quarters until recently occupied by the freight department of the New York Central Railway. Over a dozen wholesale lumber firms in Toronto now have their offices in the Bank of Hamilton Building, which some members of the trade frequently refer to as the "Lumbermen's Exchange."

Arrangements are being completed for the erection of a new sawmill at Goulais station on the Algoma Central Railway, about thirty miles north of the Sault. Some weeks ago Senator George Gordon, of Cache Bay, went up the line to look over the lumber situation and took with him a party of lumbermen, and after going over the ground decided to establish a mill in that vicinity which will turn out one hundred thousand feet of lumber a day. It is understood the work will be commenced at an early date.

Robert Bury & Company, hardwoods, veneers and mahogany lumber, 455 King Street West, Toronto, intend removing their offices in the near future to the premises lately occupied by the Wilson Lumber Company, at the foot of Spadina Avenue. The building is being improved and enlarged, making it very attractive. Robert Bury & Company lately acquired the warehouse of the Ontario Storage Company, on the water front. An extension of 100 feet has been completed, giving the company storage space of over 15,000 feet for their veneers, in which a very large business has been developed.

Eastern Canada

G. W. Ross, Bridgetown, P.E.I., recently lost his sawmill by fire. The building was completely destroyed and there was no insurance.

A Federal charter has been granted to the Electric Welding and Shipbuilding Company of Canada, with a capital stock of \$500,000, and headquarters in Montreal.

The Drummondville Match Company recently lost their match factory at

Drummondville, P.Q., by fire, which is estimated at \$100,000. The loss is partly covered by insurance.

Forest fires in Queen's County, N.S., destroyed five residences and a number of barns and outbuildings at Eagle Head, West Berline and Gull Island, three combined fishing and farming communities. All the crops in this locality were ruined.

The Belgo-Canadian Pulp and Paper Company, of Shawinigan Falls, Que., which has acquired the sawmill of V. V. Burrill at Cap de la Madeleine, have started operations with their new plant. They are adding to it a new pulp and sawmill and a short wooden trestle.

La Compagnie Pouliot Ltee., has been incorporated, with head office at Bagotville, P.Q., and capital stock of \$15,000, to carry on a general lumbering business; to manufacture and deal in timber, lumber, shingles and articles in wood of every nature and description, pulpwood, etc. Among those interested are J. A. Tremblay and A. Pouliot, of Bagotville.

It is announced that the Quebec-Saguenay Pulp Company, Limited, with mills and limits at Delmas, on the Penobscot River, Lake St. Johns, P.Q., will commence operations on July 1. The company has 7,000 cords of pulpwood at the mill, a contract having been made for three years for the sale in the United States of the mechanical pulpwood. The capacity of the mill is 30 tons a day, which is to be increased to 60 per day. The company has developed and undeveloped water rights of 12,000 horse power.

It is announced that Archibald Fraser, of Fredericton, N.B., has been appointed by the Minister of Lands and Mines, representative of the private timber land owners upon the Forest Commission which is to have charge of the Crown lands of New Brunswick, under the legislation passed at the last session of the Legislature. The other members are: Hon. E. A. Smith, Lt.-Col. T. G. Loggie, Deputy Minister of Lands and Mines; G. H. Prince, Chief Forester; D. J. Buckley, representative of the holders of timber licenses.

The directors of the Ticonderoga Pulp & Paper Company declared two quarterly dividends of 10 per cent. each recently, putting the shares on a 40 per cent. basis, and, in addition, declared a bonus of 120 per cent. Both are payable June 29th to stock of record June 27th. The two additional quarterly payments of 10 per cent. will be paid September 30th and December 21st. The Ticonderoga Company is controlled by the Riordon Pulp & Paper Company, Montreal, which owns a majority of its capital stock.

The Gerrity-Mann Lumber Company, Limited, has been incorporated with head office at St. Stephen, N.B., and capital stock of \$24,000, to take over as a going concern the undertakings, business, assets, property, and franchises of the voluntary partnership known as the Gerrity-Mann Lumber Company; to carry on and operate a general lumber business in all its branches, including logging, driving, ponding, cutting and to manufacture and deal in lumber, logs, timber, wood pulp, etc. Among those interested are J. F. Gerrity, Bangor, Me.; J. W. Gerrity, Boston, Mass.; J. M. Mann, Calais, Mo., and C. N. Vroom, St. Stephen, N.B.

D. H. Pennington, lumber merchant and a member of the Quebec Harbor Commission, recently returned from Port au Saumon, near Murray Bay, where he went to witness the result of a drive of 22,000 logs down the Sammon River. He expressed himself pleased at the success of the drive. He also remarked that he had already loaded twelve lake steel barges with pulpwood destined for the United States. These barges carry from 1,000 to 1,200 tons of pulpwood, which makes over 12,000 tons of pulpwood loaded and shipped by Mr. Pennington's interests since the opening of navigation. He states that this is a record shipment of pulpwood.

The old Dickie mill at Stewiacke, N.S., was completely destroyed by fire recently. The blaze gained rapid headway, and it was not long before the mill fell. The mill was situated at the point where the Canadian Government Railway crosses the Stewiacke River, about one mile from Stewiacke. The mill was the property of the Halifax Lumber Company, but has not been working for over ten years. It was built in 1900 and was operated until 1907, when the Alfred Dickie Lumber Company liquidated. It was a structure of 120 feet by 40 feet. About fifty yards up the Stewiacke River is the Rufus G. Dickie lumber mill, where about fifty persons are employed.

The annual report of the Chicoutimi Pulp Company shows that gross earnings for the year rose to \$962,241, or more than double the previous year, the figures of which were \$440,547. After operating expenses, the operating income was \$851,314, compared with \$335,026. After deductions for bond interest, the net profit was \$498,139, against \$52,865 in 1916. This represents a showing of 13.6 per cent. on the 36,500 common stock issued against 1.3 per cent. in the preceding year. The company has undivided profits of \$707,870, of which the past year's results contributed the \$498,139 referred to, the balance of \$209,731 being derived from previous years.

Western Canada

The Monarch Lumber Company, Limited, Sydney, Man., has discontinued. The Beaver Lumber Company have sold their branch of the business at Winkler, Man., to Peter Bueckert.

The Morgan Lumber Yards, Limited, has been incorporated with capital stock of \$50,000, and head office at Perdue, Sask.

W. P. Lynch, Port Clements, B.C., is erecting a sawmill near Prince Rupert. The owner will be in the market for machinery.

The Moose Jaw Millwork Company, Limited, has been incorporated, with head office at Moose Jaw, Sask., and capital stock of \$25,000.

The National Lumber Yards, Limited, have been incorporated, with capital stock of \$50,000, and head office at Saskatoon, Sask.

The Imperial Elevator & Lumber Company, Winnipeg, Man., will make application to change the name of the company to the Imperial Lumber Yards, Limited.

The Dyke Sawmill Company recently lost their sawmill by fire at Courtenay, B.C. The loss is estimated at \$25,000. The company will rebuild and the new plant will cost \$20,000.

John Edwards, formerly bookkeeper for the Campbell River Lumber Company at White Rock, has accepted a position in the same capacity with the Maple Ridge Lumber Company at Port Haney, B.C.

Mr. E. Edwards, of Shanghai, representing a Gothenburg Swedish paper establishment doing business since the year 1802, was in Vancouver recently endeavoring to obtain pulp and paper supplies. He said he can take a spread shipment of 1,000 tons of newsprint alone if that commodity can be secured from the various British Columbia paper mills. Besides the newsprint he wants to order other supplies of considerable magnitude.

Change Places With Him

He is trying to work with a half-worn file,

He makes three strokes where, with a sharp file, he need make but one.

It takes him three times as long to do the job and when it is finished, he is not satisfied.

Although he may be as good a mechanic, his time sheet does not give him as good a record as the man who is working with a sharp file at the next bench.

But, educate him to turn in a file the moment it reaches its "inefficient point" and what do you get?

The new file costs but little. The man does his work in one-third the time. He is more satisfied with his job, and the employer has saved money on the time sheet.

"Famous Five" files stay hard and sharp because they are accurately cut and properly hardened. Specify them when ordering.

Cut the Cost of Forest Protection

The best communication system for forest protection work is C & W wireless. Why? Because it is the most reliable and cheapest.

Every C & W Wireless set is built for the hardest kind of service for a period of from ten to twenty years. It operates on a new, patented principle with a gap voltage of 200 volts as against 8,000 to 20,000 volts in the old style apparatus. This means the elimination of heavy, cumbersome and expensive insulation, and a factor of safety of ten as against one and a half in the old style radio sets.

Because of its extreme simplicity of construction, the initial cost of a C & W set is actually less than that of any other radio set of the same size in the world. It is so small and compact that it may be installed on an ordinary 2½ x 4 foot table. Once installed, the up-keep cost is negligible, because C & W sets can't break down.

May we help you solve your problem. Send us complete information and our engineers will give you their best service.

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, breakdowns or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims. Address

DUNLOP "Gibraltar RedSpecial"

POWER—SPEED—SERVICE

NOTHING short of remarkable was the advent of this master Dunlop Belt "Gibraltar RedSpecial." Its coming undoubtedly solved that momentous problem which had for years baffled belt users, namely, the economical transmission of power, combined with an unusual length of service.

Dunlop Workmanship An Important Factor

"Gibraltar RedSpecial" superiority lies not alone in the supreme quality of the materials embodied in it. Dunlop Workmanship, the character of which is unsurpassed, has also contributed its quota. This accounts for its great tenacity, its enduring flexibility and its absolute uniformity throughout.

Held In High Favour

Resistance to destructive elements, and the unusual capacity to continually deliver the maximum of power with the minimum of up-keep expense, are characteristics of "Gibraltar RedSpecial" which have placed this belt on the pinnacle of popular favour.

Where This Belt Excels

"Gibraltar RedSpecial" is particularly adapted to Saw, Lumber, Pulp or Paper Mills, Bleacheries, Mines, Cement Plants, Brick Yards, Oil Wells, Threshers and Stone Crushers. It is built especially to withstand the jerky strains consequent on the fluctuation of power under any load; is immune to the deteriorating effects of an over-abundance of moisture, or, as in the case of Pulp and Paper Mills and Bleacheries, injurious vapour fumes. Maximum adhesion over small pulleys on high-speed machines is another reason why this belt predominates.

The Dunlop Guarantee

If you have a difficult drive anywhere in your factory drop a line to our Head Office, or to our nearest branch, and we will send a man experienced in belt engineering to consider your requirements. If it is an instance where the "Gibraltar" Belting may be suitably employed we will recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm producing rubber products.

"The Original Red Rubber Belt."

"Suggestions for the Lumberman"

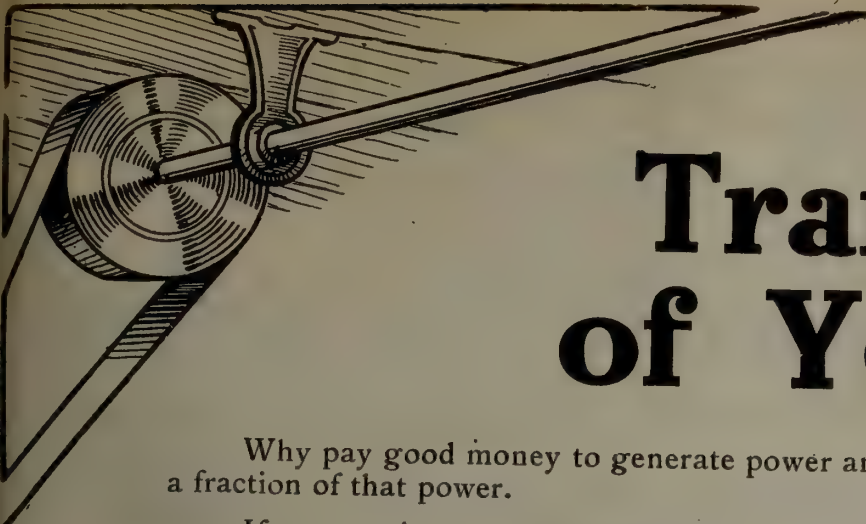

The above is the title of a booklet which we are trying to put into the hands of every Lumberman and Mill Owner in Canada. The suggestions contained therein are live, practical and of proven worth. There is something of value in this booklet for every Lumberman, no matter what the size of his camp, large or small.

The Mill Man also will find his time well spent by a perusal of this Booklet, as there are suggestions therein by means of which he can reduce his operating expenses and increase his profits.

WE WANT YOU TO HAVE A COPY

If you have not received yours yet, drop us a card. We will gladly place this Booklet also in the hands of each one of your foremen if you wish. Just say how many copies you want, if you prefer to distribute them yourself, or send us their names, and we will mail them direct.

Marsh Engineering Works, Limited Established 1846 **Belleville, Ontario**

Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated. Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

Write us for particulars and prices

THE "LITTLE DAVID" WOOD-BORER

Here is a tool sturdy and reliable, designed for hard and steady work. Crankshaft and connecting rods run on ball and roller bearings, all wearing parts of steel.

"Little David" is Non-Stalling

Light in weight and easy to handle, the slight cost of air power is very quickly made up by the saving in time and labor cost.

You will find Bulletin 8507 interesting.

Messrs Maclean Daily Reports,
Toronto, Ont.

Gentlemen:-

Replying to your letter of the 29th inst., re reports
we are pleased to say that we find same most satisfactory
and more than once they have been the direct means of our
obtaining certain business.

We have a great many dealers throughout the country
and we forward on your reports to our dealers covering their
respective towns, and where we have no instance that the dealers
actually secured business through them, we do know that they
appreciate this service from us very much.

Yours truly,

CHW/400.

Electric Hand Barker

**A Very Important
Economy Factor in
These Days of
Labor Shortage**

Every pulp, lumber and paper mill should have one of these handy electric barkers. It is the quickest device obtainable for removing small patches of bark, bumps, knots, etc.

The barker is suspended from any convenient point and balanced by a weight. One hand brings the entire barker and cutting head to cutting position while the other hand may be used for holding the work as indicated in the illustration at the right.

Length—About two feet; Weight—50 lbs.; $\frac{3}{4}$ h.p. motor.

*Any details you may wish will be gladly and freely
furnished upon request.*

Ring Oiling

WHY

Bond
Hangers

Eliminate
Hot Bearings

Are you considering the purchase of Hangers for your new factory?

Perhaps you do not realize the necessity of buying hangers that will eliminate hot bearings, or the trouble they will cause in a hanger? If a bearing happened to become hot in a hanger holding six or more machines, and they all stand idle while the shop mechanic fools around trying to fix it, you'd soon realize what inefficiency and expense this is.

The Ring-oiling device on Bond Hangers supplies a constant flow of lubricant on the full surface of the shaft and bearings, which keeps them cool when running at high speed.

Get our catalog containing full details before you buy.

GRATON & KNIGHT

Standardized Series

LEATHER BELTING

Tanned by us for belting use

In times like these you have no right to waste one ounce of power

With all costs shooting skyward, the need of economy is greater every day.
Above all, stop power-wastes.

WORN-OUT belts; belts of inferior material—even good belts at the wrong work mean needless waste. Low first-cost of material doesn't always indicate economy. To us, the largest belt makers in the world, all materials are open for use; but sixty years of experience has impressively convinced us that for power transmission, well-tanned leather is the most durable, efficient, economical belting material. Its natural friction grip gives it the maximum pull on the pulley.

Careful selection of hides together with scientific tanning and curing processes have given Graton & Knight leather belts the necessary combination of flexibility, firmness, and elasticity to transmit the full power load—without waste.

In reality, power economy is simply a matter of using the right belt for every drive. There is a Graton & Knight Standardized Leather Belt for every transmission requirement, a belt scientifically constructed to transmit the utmost power for the load applied to Belting.

It will save you money to let us recommend belts for every drive in your plant. Then, in buying, specify "Graton & Knight—Brand or equal." This does not commit you to buying our belts. It does put your buying on the one economical basis—that of the work to be done.

Write for information about Standardization as applied to Belting

*The Babbitt Metal that's at the Front in Efficiency
and Economy*

HARRIS HEAVY PRESSURE

THE ARISTOCRAT OF BABBITT METALS**SHIVES LUMBER CO., LTD., Campbellton, N.B.,
Canada**Messrs. The Canada Metal Co., Ltd.,
Toronto.

Dear Sirs:

Replying to your inquiry regarding our experience with Harris Heavy Pressure Metal, would say we have been using this metal for about five years in main bearings and cranks of Wickes' gangs and steam engines, also edgers, etc., in place of more expensive metals that we formerly used for these bearings.

We are pleased to be able to say that the Harris Heavy Pressure has in every case given us good satisfaction, being a nice metal to pour without shrinking or cracking, and wearing well. So long as this metal retains its present standard of excellence we will have no hesitation in using it for the most severe conditions we have for babbitt metal.

Yours
JOHN M. MACLEAN,
Superintendent.**WRITE FOR COMPLETE LIST OF BABBITT METALS****THE CANADA METAL COMPANY, Limited**Head Office and Factory **TORONTO** Fraser Avenue

FIRE BRICK

Differs in Quality and Variety

For instance, a certain quality or kind of brick that gives satisfaction when used in a Refuse Burner, may show up poorly if used in a Dutch Oven.

It all depends on getting the right kind and the right quality for your particular needs.

Just tell us what you want it for, and we'll send a fire-brick that was made for that very purpose.

We Manufacture the Following Well-Known Brands

"Elkco Special" "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"

Steel Carriages

**Over 450
Waterous
Carriages
Installed in
Canadian
Mills**

WATEROUS Steel Carriages are being used in the largest, best equipped Mills in Canada to-day. Built for fast cutting, for accuracy, and to give operating service, they are carefully put together of the best materials obtainable—they stay right.

Increase in cutting efficiency and the increase of cutting speed have been taken care of in the design of these carriages. Improvements in the knee and head blocks and in all moving parts to overcome lost motion; a new setworks—our No. 4—(which may be attached to Steam Setter, or be replaced by trout Power set works) which absolutely prevents and will not develop slack; new style, inserted tooth; quick and easy operating dogs; a friction receder that is operated with the Setworks—these special features are what keep the Waterous Steel Carriage at its place at the head of the list of "Up-to-date Sawmill Equipment." We build our Steel Carriages in sizes of 36" to 72" knee opening, in any length and with any number of head blocks—screw or rack motion. They are adaptable for rope or gunshot feed.

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 90c per lb.; West of Fort William, \$1.00, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00

worth of mixed metal
sold annually.

A Great Personal Satisfaction

GEORGE S. GARDINER
President
EASTMAN-GARDINER LUMBER CO.
Laurel, Miss., says

"Sober, saving, permanent labor is one of the best assets a lumbering manufacturing plant may possess. Our experience has been that the Y.M.C.A. is of the greatest assistance toward this end. It helps all to help themselves—morally, mentally and physically. We feel that those who are willing to spend in this way will find a great personal satisfaction in cooperation with their employees along this line and will reap many indirect results from the closer interest and contact with them."

The Y. M. C. A. in Industry

ONTARIO

Canada's Banner Province

Ontario's timber production last year valued at \$26,774,937 or 40% of Canada's total output.

Pine production,	905,442,000 ft. B.M.
Pulpwood,	246,282 cords.
Railway Ties,	5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

For maps and full information regarding Ontario, apply to

"WE AIM TO SERVE YOU WITH THE BEST"

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

FIRE BRICK

Each brand is specially suited to a separate use. We have the experience to manufacture and supply the finest grade of Fire Brick for the varying uses of the Lumber Industry. The same brick may not meet the requirements of your Dutch Oven and of your Refuse Burner.

This is a product that should have your most careful attention. When so much depends directly on the successful operation and dependability of Fire Brick in your plant, it will repay you many times to make a most careful investigation before the installation. Let us show you where our product has been successfully used for years. Let us suggest a special brand for your particular purpose.

We have an interesting catalogue that will be sent you. It will give you an insight into the proper methods of Fire Brick construction.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

No. 14

The Housing Problem Must Be Grappled with Promptly

No problem is receiving greater attention from municipal, provincial and other authorities at the present time than that of providing suitable and comfortable homes for the working people in order to meet the extreme necessity which is being faced in various industrial centres. More and more large employers of labor are recognizing the fact that when help is properly domiciled there is less restlessness and discontent in the ranks. The housing proposition is now being considered from every angle and various plans are being put forth in order to meet present requirements. Among those who have given considerable thought to the question is Finance Commissioner Bradshaw, of Toronto, who thinks that municipalities might well co-operate with large firms and employers of labor, and assist them to provide self-contained dwellings for their workmen.

It is realized that the best citizen in any community is the one who owns a home, has some stake in the prosperity and welfare of his own town or neighborhood, and rejoices in its general progress and uplift. Private and public sentiment are thus created and these are two very active and vital forces in the stability of any burg. The spirit engendered has its effect upon many and when the multitude become possessed of an ambition to excel substantial evidence is soon seen on every hand. The most feasible proposition which has been put forth seems to be that for working men's houses a lot should have about 25 feet frontage, the owner having a plot of ground in front and a suitable garden in the rear. These houses will cost in the neighborhood of \$2,000, and be provided with six or seven rooms, including all modern conveniences. Some will be detached and others semi-detached, and arrangements can be made by the various housing companies for the sale of these dwellings to the occupants on the method of regular monthly installments similar to rent. Thus, after a period of ten or twelve years the workman would possess his own roof, vine and fig tree. Citizens securing such places would be pay-

ing for the full value—although not an excessive one—while organized, well planned construction would keep down the expense to the lowest point. There would be no surplus entering the pockets of speculative builders or avaricious landlords, who too often mortgage the tenant's future in order to realize handsomely on the present. Owing to the exceedingly high cost of materials, including labor, private enterprise does not feel like undertaking any very extensive programme in the house-building line, and therefore, housing companies and municipalities must come to the rescue. It is a matter which must be dealt with without delay and while numerous theories and various solutions are propounded none has been evolved as yet which answer adequately the necessities of the situation. Owing to the amount of study being given the question, there is no doubt that a satisfactory outcome will result in the near future whereby the class of dwellings most desired will be undertaken on an economical basis and a larger proportion of urban population become home owners instead of mere renters, thus imparting permanency and progress to any centre.

Where people own their own homes they become greater forces and more aggressive factors in the success of any community, and what means the individual prosperity of each spells expansion and exceptional opportunities in the larger assemblages designated as our cities and towns. Unless the situation is speedily relieved it will grow relatively worse after the war. Now is the time to grapple with the problem. The Housing Committee of the Organization of Resources Committee has work ahead and an opportunity to render practical public service that is seldom presented. The visionary or speculative is not what is wanted, but the concrete, the definite, and the immediate.

Building Up Business in Lumber Line with Rural Customers

The average retail lumber dealer does not perhaps devote enough attention to the special wants and interests of his country customers. He is content to accept what business is offered him by rural purchasers and let matters go at that. There is no doubt that during the late summer and early fall there will be considerable building in the country if the present bright crop prospects continue. There is no man today who appreciates a little attention and personal contact so much as the farmer. He probably reads more closely than any other member in the business community all literature sent to him, and, with the rural mail routes that form part of our modern postal service, every facility is afforded of reaching distant patrons by well directed publicity.

In the last decade in Ontario and all the other provinces there has been a remarkable change in the character and number of farm buildings. The whole surface of the land is dotted with attractive dwellings; and well-built, modern barns, sheds, implement houses, henneries, etc. The community spirit of progressiveness is infectious and no greater evidence of advancement in pastoral life can be afforded than by means of a motor trip through any of the prosperous sections where development in the structural line is presented on every side.

One of the best articles on the subject of increasing country building during war time appears in a recent edition of the "Mississippi Valley Lumberman," from the pen of C. H. Ketridge, who has given much thought and attention to the subject. What he outlines can be applied in most instances by every yard man in the Dominion, with the result that he is bound to see his business grow. Here is what he says in part:

"Every lumber office in the country towns should have a separate map of every section in that part of the country, showing on it every farm and the location, number and character of every building on it. An inventory of this every year would show what has been added. Make these section maps large enough to do this. Of course, this may seem at first thought a difficult and costly thing to do. But after you have commenced and proceeded on it a little way you will find that it won't take as long or cost as much as you thought it would. And,

when it is completed, you will value it at several times what it has cost you. Having this information on file in your office, you will have something specific to work upon. You will know just what farmer is lacking in sufficient grain storage, shelter for stock, and farm machinery, whether he has got a coal house or a decent privy, a silo, screens or storm sash on his house. You will have all this information to work on to assist you in creating more business in the slack periods of the year. Just at this time, for instance, you have a general idea of more or less need for grain storage this fall, and if you had these maps you would know just what farmers are lacking in this particular item and you could begin now to influence them. The same thing could be followed with any of the other items. In this way, you could begin to develop your trade for several months ahead.

"I don't know of any other line of business that offers the opportunity for an inventory that I have outlined, because in the matter of building improvements on a farm everything is in plain sight, and requires but a few minutes to note them down on paper. Preferably, it would be best, if the dealer canvassed the territory himself, as he could meet the farmers individually and give them some building talk. I never yet made a call on a farmer on his home place that I could not afterward trace a sale from the result of that visit. I really think that the lumberman, as well as the rest of the business men of a town, make a serious mistake in keeping from personal contact with the farmers on their home premises. I know it is an old, old notion that every man should stick close to his place of business, so as to be there when customers came. This is all right enough as a general rule to follow, but it has been carried to the extreme, especially by lumbermen. It is a fault that has caused them to sit tight in their offices and wait for business to come to them without any particular effort on their part to induce it; other than a willingness to cut prices to get it. I don't believe, of course, in a dealer's gadding about the streets, or leaving the office because it's tiresome sitting round doing nothing, but I do know there are many times during the year that he can make more money by being out in the country calling on the farmers than by staying around the yard. If you have never lived on a farm, you cannot realize the pleasure it is for a farmer to have a friendly visit with a business man on his place, and he will take pride in taking him around and showing him his stock and other things he has. The dealer may not say a word of business to him, but the subtle influence of the friendly interest manifested by his call will surely remain with that farmer to bring him to the yard when he wants to build.

"As I have said, country lumber dealers keep too much to themselves in this regard. They only see the farmer when he is in town, and in this business atmosphere he is not the same as when you meet him in his own farm yard. Farmers are the most sensitive class of people I know of in the matter of social relations. They often imagine that business men look down on them as clodhoppers and as being all very well to do business with, but not to associate with in a social way. This is a false idea, we know, but we unconsciously encourage it by our practically forcing upon them a social isolation which keeps the country and town apart in social relations. You can put it down as fundamentally true, that the average farmer will trade with those business men whom he likes best as friends and particularly those who manifest their interest in him by social calls on him at his home."

Bringing About Better Results by Closer Co-operation

The average man is so engrossed in his own problems that too frequently he has neither the time nor the disposition to give any thought or heed to those of the other fellow. If he is in the manufacturing business he is prone to believe that he has troubles enough of his own without becoming vitally concerned in the problems of the chap in the retail ranks. He bestows slight consideration on the latter and thus interest becomes divided and differences which might be readily adjusted grow larger and more difficult of solution. The get-together movement is one of the most hopeful signs of the times, and, by cooperation, the manufacturer can help the retailer, and the

latter can aid the industry generally in presenting frankly and fairly and in an inspirational spirit the condition of affairs so far as he is concerned.

Recently the President of a large western lumber company who had been engrossed for years with his own problems, saw some light in another direction and more particularly in the merchandizing of lumber. He says that only a few years ago when he became absorbed in the distribution of lumber to the consumer did he begin to appreciate the large part which the retailer plays in the successful marketing of the products of the forests, and how many possibilities manufacturers have overlooked. He was also astonished to find out how little the average retailer knows of his source of lumber supply and the vast amount of labor and expense required of the manufacturer in producing it. The more he investigated the merchandizing of lumber the more he found that the producing and distributing factors of the business were separated by a simple lack of appreciation of the numerous ways in which they might help one another sell the greatest amount of material at the largest profit.

"It is wise to get a right perspective and see every question from different angles. Points of view vary and only by having a comprehensive knowledge can clear, well reasoned opinions and logical conclusions be reached. Here is the unbiased verdict arrived at by this leading exponent of the trade:

"Many of the difficulties arising out of such a situation can be easily cleared away by a little bit of sales co-operation and a more intimate knowledge of what the other fellow is contending with. For instance, I know from experience that while successful manufacturers try to cut their logs in such a way as to obtain the most desirable and most profitable stock out of them, they are in the end finally compelled to sell everything that those logs actually produce. There is of necessity an unbalanced accumulation of various sizes, lengths and grades; and the manufacturer's sales, therefore, cannot stop with the moving of only so-called standard items. Part of our manufacturing cost has gone into them and they must also be sold. What we need, then, is for the manufacturer to assist the retailer in finding uses and creating a demand, at the retailer's yard, for all the products that his logs produce. Even now, as a retailer I find it a big advantage to know all of the varied sizes, lengths and grades that result from cutting the logs at the mill. I find that it makes quite a difference in the year's profit if we can buy even a very small proportion of our stock in short lengths and odd items and then fit them to the customer's needs. Our customers like to feel that we are on the lookout for the best purchases for them. And I know that we are helping the mills dispose of items that without this co-operation they might and probably would find it hard to move.

"It is just this lack of co-operative effort and the ceaseless demand upon the manufacturers for stock sizes and lengths that I find has resulted in a good many retailers frequently gaining the impression that lumber is scarce. Manufacturers' salesmen have sometimes left the impression that the stock of a certain item the retailer wanted to buy was unobtainable, and the dealer has sometimes concluded that lumber was becoming hard to get and that perhaps he had better turn to some substitute material, when, as a matter of fact, the shortage of that particular item may have existed only at the particular mill that salesman represented. I have in mind a retailer, for instance, who, because one salesman could sell him only a part of a car of White Pine lath on that particular day, immediately put in a car of metal lath. With all of the many mills manufacturing lath, wouldn't it have been better if that manufacturer's salesman had, through his mill office, helped the dealer find elsewhere the balance of the White Pine lath he needed, rather than to have run the risk of his buying metal lath in their place? Unfortunately it is true that stocks of necessity oftentimes become unbalanced and cannot fulfil the demands made upon them. One run of logs may cut into quite a different proportion of sizes, lengths and grades than another run of logs will cut, and the demand on any mill may settle upon an item on which that mill may temporarily be short. But that does not mean that lumber is scarce, and dealers will not get the impression that it is if they are given the whole story instead of just a part of it."

Head of Canadian Forestry Corps Gets Results

Brig.-General McDougall Says That There is Not a Man Under His Direction Who is Not In the War up to Neck—His Great Passion is Work

Brig.-General Alex. McDougall,
Canadian Forestry Corps.

The work and worth of the Canadian Forestry Corps has been frequently referred to in the columns of the "Canada Lumberman." Their great activity in getting out the timber, their resourcefulness and enterprise and devotion to duty need no extended eulogy on the present occasion. Of the man who is at the head of the Canadian Forestry Corps, not so much has been said. He has not sought the limelight but has quietly gone about his task and purpose, allowing results and achievements to speak for themselves.

Brigadier-General Alex. McDougall, Director General of the Canadian Forestry Corps, is frequently referred to as the "Lord of the Lumberjack," and is a graduate of Toronto University. He later attended the School of Practical Science and branched

out into railway contracting. Large stretches of the National Transcontinental came under his direction, and he carried out his undertakings efficiently and thoroughly. In the London Daily Chronicle there appeared lately an admirable character sketch of this man from the pen of the noted writer Harold Begbie, who says that McDougall "is a remarkable man, who has a great passion for work and the bigger and harder the job the more he is pleased." Mr. Begbie adds: Famous in Canada, from one end of that great Dominion to the other as a master-man, a man of imagination and audacity, General Alexander McDougall, who at forty years of age is Director-General of the Canadian Forestry Corps, has made a like impression upon those Englishmen who have encountered him on this side of the Atlantic.

Life Force that Drives and Inspires.

He is not so much a remarkable as an astonishing man, a man who takes your breath away and scatters to the wind a number of your pre-judgments concerning the proper behavior of civilized man. "Most people are other people"; but here is a fresh-minted soul, stamped with no image now in currency. The life force within his sturdy body is of so driving and fierce an energy that it could no more stop to copy other people than it could spend ten minutes before a looking-glass in search of its reflection. This life force has one passion, and that is work; it is in his work, and the bigger and the harder that work the more he is pleased, that the spirit of Alec McDougall, quite unconsciously, affirms its own essence. He lives in achievement.

"Say," he cries, "I'll tell you something that will make you laugh. Listen now. When our fellows got over here they thought they'd come to cut faggots. They thought that was all the timber they'd find in the little island. But when the train was running out of Liverpool one of 'em, with his eyes starting out of his head, calls out, 'Why, hang it, there's a big tree!' and then jumping up and looking out of the window he exclaims 'Why, hang it, there's two or three trees!' Since then they've cut down a tree in Windsor Park seventeen feet in diameter, and looked at one still living that's mentioned in Domesday Book." Here the General flung back his head and laughed till the room seemed to shake.

Consider these figures. The Canadian Forestry Corps, the whole expenses of which are defrayed by the Canadian Government, have provided us here in England with 300,000 tons of sawn timber a year, exclusive of 5,000,000 tons of mining timber cut in 12 months.

"The boys are splendid," says the general. "There's not a man among them who isn't in this war up to the neck. The Germans can't beat them. They've made big sacrifices to come over here, and but for them the war would have been lost a year ago; that's a fact. Timber's essential. Lucky for us you've got it here—thanks to your sporting landlords of a hundred years ago. Wonderful timber! But England's wonderful altogether. After the German offensive in March the army sent out a sudden demand for 40,000 tons of timber, wanted at once. Our boys were so keen they worked all hours God

ever made (because it was for the men at the front), and they provided 30,000 of the 40,000 tons ten days before the date fixed for delivery. They can hustle, I tell you, when they've got a reason. One of our sawmills over here was designed to cut 20,000 feet of timber in ten hours. The actual performance in that time was 155,366 feet. Some output, what?

Can't Be Beat for Efficiency.

Ah, I tell you, they're fine, they're great fellows. I'll talk about myself in a minute, I do it well; but first of all I want to talk about the corps. We've got companies all over the British Isles and in France, working from morning to night, and ready to go off anywhere for three months at a moment's notice without borrowing a nail from anywhere. Why are we always talking about German organization? Why not sometimes a word about our own? Canada ain't afraid of Germany, that's certain. You should hear what the French foresters say of Canadian efficiency—they say we can't be beat for quickness and efficiency. And we have to get our own machinery and do everything for ourselves. When we first came over there was a bit of trouble in that matter. We were sent here and there in a deuce of a hurry, and found no machinery of any kind. 'Hang it,' I said, 'you can't expect us to bite the trees down.' But I believe they did! Ah, but we've got some rare tackle now. You must see it. I tell you, we're turning out the stuff all right, here and in France.

"By-the-by, don't be shocked by our swearing. It don't mean the same in Canada as it does over here. It's natural to us. In Canada everyone swears. My little boy, he was six years of age at the time, was swearing one day in the kitchen, and the cook told him if he was not careful his teeth would drop out. He looks up at her—only six years of age mind you—and says, 'Daddy's teeth haven't dropped out!' What do you think of that?" His laughter made me think of Henry VIII. There's neither snigger nor simper in the soul of this dashing young general.

The boys are doing the biggest thing men ever did in the world. I'm ready to stay over here six years longer to make a real end of it. What happens to my business don't weigh a snap with me. This war is good for us. Colonel Penhorwood and I, both rivals in the contracting business, were worshipping at the doorstep of millionaires when it began; were we not, colonel? That's a fact. The dollar seemed an awful big thing to us. And now we know there is something bigger in the world than money. God, but what a chance this war is giving us! What an opportunity for a great Empire, outside politicians. England's discovering Canada, and Canada's discovering England. And so with the other Dominions. Our people are all assembled together here in Europe, like the parts of a machine, and we're driving forward, one big democracy, to smash a thing that would knock manhood out of the human race if we gave it a chance. Oh! I see such things for the Empire!—chances, my hat, I should think there were chances. Smashing Germany is one thing; we shall do it; realizing the British Empire is another; and that's bigger still."

Feels that Work is Big Thing.

McDougall's father was Auditor-General of Canada and a former senior wrangler at Toronto University.

"I got a dollar in his name," says the General, for his father was one of the most respected and honorable of Canadians. The son also became a senior wrangler in the same university, and, on the advice of a friend, after considering that it would cost him 75 cents to do so, he telegraphed the news to his father. "Darn it, the old man turned up the next day, came nearly 400 miles to be near me, and I couldn't shake him off for something like a week. It troubled him when I turned a contractor, for he was the enemy of all contractors; but he loved me right enough for being a mathematician. He never forgot that. I've got skeletons in my cupboard; but don't suppose I can't hide them! All the same my father was a big man, and he has meant a lot to me through life. He thought more of character than he did of dollars. He made us feel that work was a big thing. And that's what the Empire has got to feel. We've got to hang together after the war is over, and work like the very devil to make the biggest, grandest and happiest thing on earth, a democratic Empire. There's nothing like work. But you must have an ideal if your work is going to mean anything to posterity. That's what every man in the Empire ought to have, an ideal, something bigger than himself."

India Will Adopt Modern Timber Methods

F. A. Leete, Conservator of Forests in Imperial Service, Studies Milling and Logging Systems in Both Canada and United States

An interesting visitor to Vancouver, Toronto, Montreal, Ottawa and other Canadian cities was F. A. Leete, Conservator of Forests in the Imperial Forest Service of India, who for several months has been studying milling and logging methods not only in western Canada but in many portions of the United States. He also addressed several Forestry clubs.

Mr. Leete was sent to America by the British Government. For twenty-seven years he has been in the forest service of India, the latest five being at the head of the department. Born in England, his experience in lumbering and forest problems has been wide and thorough. He states that in India the great part of the forests is mixed hardwoods but that up the slopes of the Himalayas, starting at an elevation of six thousand feet and running up to twelve, soft woods grow in abundance. Mr. Leete reports that he was most cordially received wherever he visited, and had a fund of valuable information placed at his disposal in the matter of getting out timber and in the various uses of wood in different lines of industry.

After spending three months in England on his return there, he will proceed to India and put into active operation some of the pointers which he has picked up on his late extended tour. He thinks that in some respects India can get a more progressive move on in certain timber operating methods. He remarked that there was an opening for Canadian and American saw mills and logging tools in British Burma, and manufacturers of both the Dominion and the United States could well direct their attention in that line. Mr. Leete foresees much greater possibilities for the lumbering industry generally in India, and is quite enthusiastic over future development.

Methods Can be Much Improved.

Mr. Leete was much interested in the practical work of the Forest Product Laboratories in Montreal and also the institution at Madison, Wis. Speaking of conditions in Burma, he said:

To a Canadian the sawing methods in mills in Burma must seem to be behind the times. There are no big band saws and virtually all the breaking down of logs is done on plain rack benches with circular saws. The logs are held in position with wooden wedges. The cutting of boards or planks to a given thickness is done by chalking the table at both ends and levering the logs into line. The saws run from 54 to 84 inches in diameter. Inserted teeth are not much used. There are no up-to-date edgers or gangs of swing cut-off saws such as are to be seen in almost every big saw mill in America. Vertical frame saws are used in some of the larger mills. After leaving the long bench, most of the work is done on small hand or rope feed benches with circular saws of three feet or less.

The principal lumber centres in Burma are Rangoon, Mandalay and Moulmein. The Rangoon sawmills employ about 10,000 men and labor of course is cheap. About 55 per cent of the total area of British Burma, estimated at 225,000 square miles, is wooded. Teak comprises about 5 per cent. of the total stand. This timber frequently attains a diameter of four feet with a clear bole of 60 feet. One teak tree to the acre represents a fair stand. Trees three feet in diameter with 50-foot boles, producing $2\frac{1}{2}$ tons per tree, are the rule in the concessions. One ton is the equivalent of 1000 feet board measure.

Next to teak, the most important wood in Burma is pyingado, an extremely hard wood which makes excellent railway ties and is a good structural timber. It is commonly associated with the teak and grows to even greater dimensions. Unfortunately it will not flat and cannot therefore be extracted anything like so cheaply as the teak.

The total production of all species of lumber in Burma in 1909-1910 was 104,000 tons of teak and 100,000 tons of mixed woods; in 1917 the total probably aggregated 300,000 tons.

How Teak Logging is Conducted.

All trees are selected, marked and girdled by the Forest Department before the lessee is allowed to operate. It is necessary to girdle the trees three years before cutting to insure floating. The lessee pays for the timber on the basis of the cubical contents at a measuring station, usually at a rafting station or on the edge of the forest. Small steams carry the logs singly to the larger rivers, where they are rafted for delivery to the mills. Driving can be done only in the rainy season, covering a period of six or seven months. No trees are felled more than three feet from the ground. The logs are yarded by elephants, one ton for an elephant being quite a fair load.

The average drag is about one and a half miles, and one hundred logs per elephant per season is a fair average.

Teak has its habitat in rugged territory, as a rule growing on ridges. Trees are thrown up hill whenever possible in felling.

The Forest Service of Burma also carries on logging operations on its own account. The logs are delivered at Rangoon and sold at monthly sales. They help to keep the small sawmills supplied.

Mr. Leete did not care to discuss the possibility of extended use of skidders in Burma, but he said he was on the lookout for a smaller and more portable type of machine capable of hauling logs up to three tons in weight. An oil engine would be preferable, as water is a difficulty and oil is cheap. The one thing to be desired is that the machine should be readily taken to pieces and easily put together again. For transport from place to place no part should exceed 1000 pounds in weight, and an even smaller limit would be better. Such a machine would soon be taken up in Burma, as elephants are nowadays so expensive. The price of elephants is double what it was 15 years ago and now stands at \$3000 for a full grown tusker. Further increase in price is likely.

Some interesting observations on the growing of teak since the inauguration of the re-planting program in 1865 were made by Mr. Leete. Teak in its natural state attains a diameter of 30 inches in 150 years. Where the trees are planted and given care they may be expected to reach this diameter in 90 years, showing the value of forestry methods in stimulating production. The age of the larger teak trees varies from 500 to 1000 years.

The Lumber Has Doubled in Price.

In 1914, before the war, the smaller and inferior quality of round teak logs sold for \$30 per thousand feet and the larger sizes and decking grades for \$130 per thousand feet. The prices of sawn timber at the mills was double these amounts.

Lessees pay royalty at so-much per ton of 50 cubic feet on the teak logs extracted by them from the government forests. The logs are graded into three classes: full sized, undersized and refuse. The rates vary in different forests and average from about 25 to 30 rupees for full-sized logs and from 10 to 15 rupees for the other two grades. Three rupees are equal in value to an American dollar.

The success of a teak operation is in a large measure dependent upon the driving streams traversing the concession. A driving stream which will permit the logs to come out the same year as they are put in is considered first class. Three to four years are often required to bring the logs into the main rivers. The improvement of the Burmese rivers has been a subject which has been given much attention, and many plans for increasing the usefulness of the waterways have been evolved.

The Forest Service of India embraces Burma, Bengal, Assam, United Provinces, Punjab, Central Provinces, Madras and Bombay. The personnel of the Forest Service of Burma includes Chief Conservator C. G. Rogers, with headquarters at Rangoon and Maymyo. There are four conservators, two of whom are located in Upper Burma and two in Lower Burma. Mr. Leete was located in one of the sections in Lower Burma. The policy upon which the forests are administered is with a view of maintaining a perpetual timber supply. The Forest Service ideals are all moulded along this idea. The Forest Department is self-supporting. The expense of administration is 45 per cent., leaving 55 per cent. of net income.

For fire protection the country is divided into blocks with regular forest patrols. Only the most valuable tracts are patrolled. Fires have not proved very serious. The protection of the young forest growth is given much attention. The cost of fire protection is about \$10 per square mile, although as high as \$10 per square mile is expended in some cases.

Crown Timber Office Returns Increase

Receipts at the Crown Timber office in June were \$5911.83, as compared with \$2839.80 in June last year, an increase of over 100 per cent, says a recent despatch from Vancouver.

During the month the scalers of the department measured some 6,937,239 feet board measure of sawlogs and 6,408 cords of shingle bolts and in May 10,075,514 feet b.m. and 5655 cords of bolts.

For the first time in a year the customs receipts decreased, totaling \$18,159.69 for June of this year, as against \$26,475.12 in that month last year.

Big Timber Operations in Great Clay Belt

Canadian Northern Railway Takes Out Large Quantity of Ties and Logs— Model Sleeping Arrangements for Men Employed at Foleyet

Extensive timber operations are being conducted by the C.N.R. in the townships of Foleyet and Ivanhoe, north of Sudbury, and are assuming proportions that are particularly gratifying. Last winter twenty contracting camps were operated and 400,000 axe-made ties were taken out along with 6,000,000 feet of tie and lumber logs, principally of jackpine. The company also cut 17,500 cords of pulpwood from off the same ground, which is being shipped to Thorold. There is a well-equipped rossing plant which is provided with drum barkers and from 60 to 100 cords of 2 ft. pulpwood are being rossed each day. By means of pulpwood operations cars carrying coal and other supplies to northern division points and yards are assured of a return cargo, and the company not only secures a profit on its pulpwood operations, but also gets the carrying cost, besides, which averages about \$5 a cord.

Foleyet is located about 160 miles north and west of Sudbury,

One hundred thousand axe-made C. N. R. ties on lake at Mile Two, Foleyet Township, Ont.

and the sawmill this season is very busy. Some 150 men are employed and there is no restlessness or discontent in the camp owing to the splendid accommodation provided. Each man has a single steel bed, mattress and springs. This is a radical departure in the matter of sleeping accommodation, and one that has appealed particularly to the employees on the grounds of cleanliness, comfort and convenience. Excellent board is provided and there has not been the slightest difficulty in obtaining all the help required.

The capacity of the sawmill is about 70,000 feet a day, including 50,000 feet of sawn ties. The company took out about 50,000 ties in 1917, and this year the output will be some 600,000, while it is fully expected that operations will be so widely extended during 1919 that

Canadian Northern Railway Company's plant at Foleyet, Ont.

a million ties will be available. About two and a half million ties are used over the entire C.N.R. system annually. The company supply practically all the ties used west of Port Arthur to Winnipeg and east of Sudbury in Ontario, and from the operations of the sawmill last year enough lumber was secured for the erection of 107 railway employees' houses at northern divisional points. The C. N. R. expects that about 50 or 60 more houses will be completed this year. The timber and mill operations, together with colonization and mining, are in charge of Cyril T. Young, manager of the Eastern Lands-Canadian Northern Railway. Since the new mill was erected at Foleyet splendid progress has been made in supplying the company with ties and extending operations in various directions.

It is interesting to note in connection with the employees of the mill that shower baths are provided for them and the most efficient results are obtained from the housing system, which consists of large tents boarded up at the side to a distance of several feet and waterproof roof, making the sleeping quarters light and airy. It is possible that owing to the success of the enterprise at Foleyet other mills may be established in that section of the country just as soon as conditions permit. The mills and yards are electrically lighted and the town of Foleyet is growing rapidly.

The mills of the company and their woods operations provide a market in the future for the settlers of that section of the clay belt, and afford the needed source of employment when the settler has to earn some cash.

What a Difference Just a Few Days Make!

A rather good story is going the rounds to the effect that one of the leading retail lumber concerns in Toronto sent up the other day to a well-known city architect, who has the reputation of being somewhat of a crank, a load of window frames. The merchant was called to the 'phone and the architect, in high dudgeon, soundly berated him for forwarding such stuff which, he declared, was in no way up to specifications.

"All right," quietly remarked the manager of the retail yard, "have the frames returned and we will have others made that will satisfy you." The consignment came back and a couple of days later the architect inquired if the new ones were ready.

"Not yet," answered the dealer. "We cannot get out all the work required so soon. It takes some time you know. Give us a little longer and we will have them for you."

Nearly a week elapsed and, in reply to another call from the architect that gentleman was told that the stuff was completed and would be delivered in the afternoon.

On getting the material he rang up the lumber yard and calling the boss said: "Why did you not send that kind of frames in the first instance. The new ones are admirable and I am well pleased with them. Mail your bill and I will see that it is paid."

After settlement had been effected, the lumberman was incautious to confide to a friend that he was glad Mr. Blank was pleased, even if the frames sent up the second time were exactly the same ones which went out on the first delivery. They had not even been unloaded.

Western Soft Pine Man Visits Toronto

A welcome visitor from British Columbia to Toronto during the past few days was A. T. Robson, director of sales of the Nicola Valley Pine Lumber Co., Canford Mills, B.C., manufacturers of western soft white pine. The output of the firm this season will be about twenty-five million feet. The eastern Canada representatives of the Nicola Valley Pine Lumber Co. are Terry and Gordon, Toronto, who report an increasing demand for the stock into which they are going more extensively than ever. Mr. Robson states that the plant is very busy operating both night and day shifts, while other interior mills are on the ten-hour basis. The company has a modern band mill, with pine logs in abundance. Mr. Robson added that first-class manufacturing with an efficient organization and reliable grading has a lot to do with the persistent requisitions for the firm's products.

We Must Sell More Than We Buy

How Canada Can Pay the War Debt to Other Nations
After Present Strife is Over

The problem of industrial conditions after the war is always interesting and is arousing much thought and attention from leading representatives in all lines of endeavor. With his varied business interests and close connection with the activities of the North, A. J. Young of the Young Lumber Co., North Bay, Ont., has given some consideration to the problems which will have to be faced, and the readjustment that will demand attention. Touching upon the question of "Industry after the War," in a recent interview, he said:

"Canada's share in the great world-war is not only that of furnishing men to reinforce the Allied armies, but also that of producing food necessary for their maintenance and money or credit to pay our share of war munitions and supplies. Manifestly our resource in every line will be taxed to the utmost before the final decision, and while our first thought must be the immediate steps which will enable us to fully provide for all our obligations, we must not neglect these vital principles which will enable us to receive back into civil life without serious derangement to our economic system, the four hundred thousand men who laid down their tools of their usual avocation and joined in the defense of their and our liberties.

"If the history of previous great wars is repeated, to these will be added hundreds of thousands from war-torn Europe seeking new homes and new surroundings in which to reconstruct their family life.

To-day the world is short of food, and even under the most favorable conditions the 1918 crop will not be sufficient to do more than supply immediate necessities without any surplus to cause any reduction in the already abnormally high cost of living. These conditions will continue until the world is again at peace and the men withdrawn from food production are returned to the tilling of the soil and the depleted granaries are filled.

"Of the newspapers a percentage will be from the agricultural sections of Europe, and our millions of acres of unbroken lands in Western Canada will furnish homes for those who desire to settle on the land, and with an intelligent system of assistance they can be absorbed into our national life without disturbance, and in a few years add their quota to our annual production.

"The real problems will be our own citizens, the men who went to defend us, and who will return to us with minds unsettled by the stirring scenes through which they have passed, with their usual occupations gone, their earning powers decreased, and facing the necessity of carving out for themselves a new niche in our industrial structure.

"With the close of the war, the manufacture of munitions will cease, and war orders for supplies of iron, wood, cotton, wool, and leather goods, which have for some years been such a large proportion of our manufacturing output, will be largely curtailed. Therefore, to the demoralized fighting forces will be added the discharged war orders workers, and we will face a period of reorganization of manufacturing plants along peace instead of war lines, a surplus of industrial labor and a continuing scarcity of food products with consequent high cost of living.

"It is obvious with the world scarcity of food and our resources that the most immediate remunerative labor will be the production of food, and properly directed, a percentage of our men will find temporary employment in this line, but resumption of production in other countries will in a few seasons bring the demand back to normal, with a consequent reduction in the number of men employed.

"The trade returns of recent years show that our export of manufactured articles has largely increased, due to war orders. With the war orders cut off, this trade should decrease, and it must be our object to substitute other lines so that our trade returns will continue to show large balances in our favor. If we are to pay the war debt we will owe to other nations, we can only do it by selling more than we buy; and to maintain a proper balance among all our lines of industry we must sell a proportionate share of the product of each line, and in this way each will share in the general prosperity.

"The period of readjustment will try the souls of our people and during that time we must have industrial peace in our country, so that we may be able to face our problems without internal dissensions. On the workers and producers will fall the burden, and they must be protected against conditions they cannot control.

"The solutions for all our problems will not be easy to find. They will require the best thought of our country and must be dealt with along national lines.

"It may be necessary to increase the measure of National control now exercised in certain directions, and the nationalizing of certain lines of industry. These must be considered in a national spirit, calling into council representatives of all classes, and solving them along the lines of the maximum of efficiency and production, with the minimum of disturbance in our social and economic life."

Wholesalers Part in Lumber Service

Channels of Trade Established by Long Use Should Be
Conserved Under All Circumstances

The place of the wholesaler is now receiving much attention in lumbering circles, especially in the western states and steps have been taken toward securing governmental recognition of this branch of the trade as an essential factor in the distribution of the products of the forests. In years gone by there have been sporadic attempts to eliminate the wholesaler but every effort in this direction has been short lived. Under the unusual conditions in the business world to-day, the niche which the wholesaler is filling is increasingly important and useful. Many mills have no sales departments of their own and the function of the wholesaler is to give special attention to marketing matters and the varied needs of the country at large in the way of distribution. He acts as the representative of several mills, finances many of the smaller plants and makes a minute and thorough study of where products can be disposed of to the best advantage.

There has been established at Washington recently the National Bureau of Wholesale Lumber Distributors, and its membership has been growing rapidly. At a late meeting of western wholesalers, held in Portland, some important resolutions were carried, and a declaration of views and principles was set out for the consideration of the War Industries Board. Among the many points submitted in favor of the part played by wholesalers in lumber distribution were that the channels of trade established by long use and sound business principles in the lumber arena should be conserved and that any sudden and radical changes disrupting them would tend in the direction of confusion, reduced activities and increased costs.

The resolutions then went on to say:

We heartily approve of our Government's policy of efficiency of effecting the most thorough possible distribution of emergency war requirements among the mills direct. We believe that our present service to the Government in connection with quantity purchases of this character would be largely on an advisory character, and we know that our Government may rely upon our membership for unbiased council and for a very large amount of highly trained gratuitous service in distributing such requirements among the mills in this section.

We believe that (in numerous connections) on rush orders, and particularly on railroad and car material, some of our members who have for years specialized in those particular requirements, can render service to the Government of great value and importance.

In regard to the fixing of prices on lumber for commercial purposes as distinct from the Government's own emergency requirements, we believe that the priority of Government orders can be assured without abridging the right of free trading in the lumber not required for Government purposes. We would oppose the fixing of prices on commercial lumber as dangerous precedent and tendency for which no necessity in our judgment exists. But if in the opinion of the War Industries Board, after hearing all evidence, it is determined that prices should be limited, we earnestly recommend that the prices fixed by the Government be only maximum prices for each class of material.

We earnestly recommend that in fixing such maximum prices the matter of discounts which the producers make to the jobbers and dealers be left open for adjustment between the parties from time to time according to the circumstances existing and to the class of material being handled as always heretofore.

Having received from a very large preponderance of the lumber producers of the North-west statements endorsing in substance our views as to the importance of conserving the established channels of lumber distribution, we resolve and pledge ourselves to keep all those who have furnished us with these statements informed from time to time of our activities and of all matters undertaken and done on our behalf with our knowledge and support.

The American Government are experimenting with wooden soles as a substitute for leather soles in the American Army. It is reported an order for one thousand soles to be made of maple and poplar wood has been given to Brockton manufacturers. It is reported that a saving of two dollars per pair of shoes can be effected by supplementing wooden soles for leather.

It was stated in the July 1st issue of this paper that Wm. Davies Co., Ltd., contemplated the erection of a box factory in Toronto. The manager, Mr. E. C. Fox, advises us that this was a mistake and that the Company has not considered the erection of a box factory.

Accident Prevention in Lumbering Operations

What Safety Organization Can Accomplish—The Standpoint of the Work Presented from Humanitarian and Financial Points—Comparative Statistics

According to a recent report issued by the Workmen's Compensation Board of Ontario, there were 1,003 accidents in lumbering operations in the province during the year 1916, and 901 in planing mills and woodworking plants. In the pulp and paper mills of Ontario the number was 608. In lumbering, which includes woods operations, river driving, rafting, sawmills, shingle mills, lath mills, lumber yards, etc., the number of persons suffering from temporary disability during 1916 was 825; permanent disability 132, and deaths 46, while in the pulp and paper line there were 532 temporary disability, 61 permanent disability and 16 deaths.

Considering that there are about fifteen thousand men engaged in the lumbering industry in its various operations, the statistics show that on an average one man out of every fifteen either suffered a mishap of some kind which resulted in his being laid off for a few days or weeks, or was permanently disabled or killed.

Here is the record of the nature of accidents in the temporary disability cases; in lumbering, bruises, contusions and abrasions, 218; cuts and lacerations, 270; fractures, 146; crushes, 47; sprains, strains, twistings and wrenchings, 68; burns and scalds, 6; punctures, 29; dislocations, 15, while the number from other causes is relatively small in making up the total of 825 during 1916 suffering from temporary disability.

The total days lost in the lumbering industry was 28,125, in temporary disability, and from permanent disability 11,999, the average in the former being 34.09 days, and in the latter 90.90.

Writing to the "Canada Lumberman" a members of the Workmen's Compensation Board says:—

"Complete statistical information for 1917, other than what appears in the report, will not be ready for publication for some time yet and probably will not be published till the 1918 report.

"Perhaps the number of accidents reported in any class should not in itself be noted with much alarm because always the large proportion of accidents actually reported cause but slight disability.

"Take California, for example, which report for the year ending June 30, 1917, is just to hand. Out of 94,879 industrial accidents reported only 16,294 caused a time loss of over two weeks. All the remaining injuries came within their two weeks' waiting period.

"In looking at our figure of 15,500 men employed in Class 1, you must not overlook the important fact that this means full year workers. With the large labor turnover in mostly all industries at the present time, particularly the large number of short time workers in Class 1, this figure referred to is far from representing the actual number of workmen employed in the lumbering industry."

How Hazards May Be Minimized

Accidents have been, and always will be, but that they can be prevented in a large measure through safety devices and proper safeguards has been amply demonstrated. The work and worth of safety associations was convincingly illustrated in an able paper read before the Technical Section of the Canadian Pulp and Paper Association, at its recent meeting in Toronto, by A. P. Costigane, secretary and safety engineer of The Ontario and Paper Makers' Safety Association. Pulp and paper activities are closely allied to sawmill and lumbering operations, and the hazards in both are much the same. Mr. Costigane's remarks are so pertinent and logical, and his facts so pointed, that they cannot fail to be of interest in connection with all lumbering undertakings. He dealt with his subject of "Safety" under three distinct heads, and touched upon various aspects, such as the humanitarian and dollars and cents standpoints. Under the headings of "Why Safety Should Appeal to the Employer," "Why Safety Should Appeal to the Employees," and "How Can Results Be Obtained," Mr. Costigane, dealing with the first, "Why Safety Should Appeal to the Employer," said:—

It immediately strikes one that accident prevention and safety organizing should appeal to the employer from two points of view, namely, the humanitarian side and the dollars and cents side. There are nowadays few employers—and with employers are included general managers, etc.—to whom the humanitarian aspect does not make a strong appeal. They have come to realize within these last few years that the men in the mill are human like themselves, having the feelings and intelligence of human beings, and are sensitive to considerate and just treatment. Any manager who has been unfortunate enough to be present in the doctor's office when one of his employees, who has been mauled up in an unguarded belt or other hazard, is suf-

fering the process of having the stump of an arm or leg dressed, is not difficult to convince. The thought naturally occurs to him, what would his wife feel and think if he were to be brought home in a crippled condition, and what of his children's future, should they have to depend on a physically wrecked father? An experience such as outlined brings the matter home in a way that the reading of reports or listening to addresses can never do. The great majority of employers value highly the good opinion of their men and are anxious to see them working under conditions conducive to health and safety compatible with the exigencies governing the industry. Out of thoughts and feelings such as these animating leading employers of the United States has sprung that association—The National Safety Council, which has in such a short time attained to an international position in which it wields such enormous power for the benefit of all wage earning humanity. In five years' time the membership of the council has increased from 40 to over 3,500 industrial concerns employing 6,000,000 people. Could such an increase have taken place unless the high ideals of justice on which the constitution of the council is based, found ready acceptance on the part of employers and was backed up by them by the expenditure of both time and money?

The Dollars and Cents of It

Let us now examine the dollars and cents of it. This aspect may appeal to some more strongly than the humanitarian, but from my experience of the pulp and paper industry of Ontario, I would say, to very few. When by organized effort accidents in any plant have been reduced there will be a corresponding reduction in compensation paid to injured. There will also be a great saving in time lost by injured men, less interruption of work of fellow employees, less waste of material by new men, more uniform production and saving in time of foremen in training new men to take the place of those temporarily incapacitated owing to injury. All such losses can be converted into dollars and cents, and in plants where such figures have been made up they have proved most convincing missionaries of the safety movement.

Speaking of losses due to accidents, let me tell you of an incident that came under my own observation. Not long ago I met the superintendent of a plant in which there had occurred a fatal accident. In the course of conversation I put the question, What do you consider the accident cost you—expecting him to name the sum of a few hundred dollars at the outside. Imagine my surprise when he said, about \$1,000. Asked to explain, he said the accident happened at nine o'clock in the morning, and, owing to the unsettling of the other employees and the discussions among them over the various details, the output of the plant fell to practically nothing for that day. Two days later the plant shut down for the funeral, all wages being paid by the company as usual. Thus the services of 200 men for practically two whole days was the price this company paid for that one accident. The superintendent did not overestimate when he placed the figure around \$1,000.

Accidents Can Be Reduced

The question may be asked, Can accidents be reduced? I would unhesitatingly answer in the affirmative, and would point to what has been accomplished in the United States. For these figures I am indebted to C. W. Price, field secretary, National Safety Council.

The International Harvester Company, with 23 plants, employing 35,000 people and facing all kinds of hazards, have reduced compensation from 54c. per \$100 of payroll to 25c. per \$100 in five years. They have reduced the time lost per man 61 6/10 per cent. and deaths from 10 to 4, or 60 per cent. The Eastman Kodak Company, during the last two years, has reduced accidents 80 per cent. The records of the American Smelting & Refining Company, Omaha, down to the end of 1916, show a reduction of 90 per cent. in days lost and 70 per cent. in the number of accidents.

One of the most remarkable stories in the history of accident prevention in the United States is the story of what the great railroads of the country have done. Five years ago the Chicago & Northwestern Railroad began to work out an efficient safety organization. They have now 800 men serving on safety committees, and during the five years they have reduced deaths 65 per cent. The El Paso Southwestern Railroad has reduced deaths to employees 83 per cent. The Southern Pacific Railroad has reduced deaths to employees 86 per cent.

To sum up, all railroads in the United States have, over the period of five years ending 1916, reduced deaths to passengers 50 per cent.,

reduced the number of employees killed 47 per cent., and reduced the number of employees injured 43 6/10 per cent. Three hundred and twenty-five railroads having a trackage of 162,000 miles and carrying 485,000,000 passengers, did not during the year 1916 kill one passenger in a wreck. These figures are authentic and make clear answer to the query, Can accidents be reduced. That is what has been accomplished in the United States, and surely what has been done there can be duplicated in Canada.

Why Safety Should Appeal to Employees

The real safety movement consists fundamentally of constructive work for industrial betterment with the main purpose of promoting a sound body, a clear eye and brain, and a clean standard of living. Such a movement aims at preventing men from being injured; it precludes poverty, suffering and destitution in the families; it helps to prevent injury by one employee of another by carelessness or thoughtlessness; it inculcates a spirit of co-operation and good-will throughout the plant; it smooths the difficulties of the new man; it emphasizes the necessity for safeguarding physical hazards, so that employees do not feel that their lives may be snuffed out if they are not constantly on guard, to keep away from moving belts, flywheels or open gearing. It provides an opportunity for each employee to signify his interest in his fellow employees, by making suggestions for improvements. But what should appeal most strongly to employees is the toll of accidents in the industry every year. In the pulp and paper mills of the province of Ontario during the year 1917, exclusive of woods operations, there were 852 non-fatal accidents and 7 fatal accidents, involving lost time amounting to 14,249 days. That means 209 days were lost for every man or woman full time worker employed in the industry. Taking the average weekly wage of those injured at \$19.50, which is fairly accurate, we get a total loss in wages of \$39,532. Deduct from this figure the 55 per cent. paid in compensation, amounting to \$21,742, and the remainder, \$17,790, is the actual monetary loss suffered by employees injured during the year 1917. This loss can never be recovered and is an appalling tax paid annually by men for the privilege of being careless, thoughtless and indifferent. The price is enormous. Is it not worth while to take every precaution to get rid of this hydra-headed incubus that is threatening the happiness and very existence of those engaged in the industry?

The outstanding reason why employees should welcome safety is that such propaganda is for the safeguarding of their interests, both physical and moral. When all employees have grasped this fundamental truth there will be no question of their vigorous and sincere co-operation.

No matter from what angle safety propaganda may be studied, the student invariably arrives at the one and only solution of this mighty problem—co-operation. Personal co-operation on the part of the management must be forthcoming and that in no half measure, but full, free and open-hearted. The management can co-operate by establishing an official safety organization, and see that the efforts are not spasmodic, but sustained. Any safety movement to be any good must have the continuous backing of the management. Any signs of indifference on their part are readily noted in the mill and the example quickly followed. You cannot expect your men to believe in a principle you do not believe in yourself, and you cannot expect safety work to be successful in your plant unless you initiate it and back it up.

Co-operation of Foremen Vital

Co-operation of the foremen is vital and must be obtained at all hazards. There is no class of men in the mill who can more quickly or more effectually damn safety work than the foremen if their sympathies have not been aroused and their interest secured. The foreman is the man most intimately acquainted with the men, and it is really to him that we must look for results. He knows all the physical hazards of the work upon which his men are engaged; therefore, it follows that a foreman who is interested in safety and is persistent in his efforts to prevent accidents will have few accidents. What foremen do not always realize is that it is not sufficient to know that workmen are careless or that the injured man was not sufficiently attentive to his work at the time of the accident, but they should recognize that in the interest of safety this weakness on the part of men must be overcome. The foreman should be made to feel that if one of his men is injured, by a preventable accident, to that extent he is unsuccessful, or if he knows that employees under his charge are indulging in practices which involve risk of injury to themselves or others, he should co-operate by eliminating such practices, as otherwise he is morally responsible for any accident that may result therefrom. A foreman who has been successfully inoculated with safety serum will realize that constant vigilance is the price of safety, and will act as a danger signal for his men. This is especially true of foremen in charge of gangs of outside laborers.

Co-operation of employees means the be-all and end-all of safety work. The multiplicity of ways in which their influence can be made effective are governed to a large extent by the environment of the

plant and are too numerous to mention them all. What has already been said about the responsibility of the employer and the foreman does not decrease in any degree the responsibility of the employee. New men do not always realize the hazards of the occupation, and therefore unknowingly take chances. In cases such as these, older employees can be of infinite service in pointing out in a friendly way dangers which have not become apparent to the new man. Serving on safety committees, making safety suggestions, spreading the gospel of safety among their fellow employees, and using their influence in every way possible to control the demon of carelessness, which is responsible for such a large percentage of accidents, are some of the ways in which employees can co-operate in improving the conditions and increasing the happiness of their fellowmen.

This demon of carelessness is always in evidence and must be sternly exorcised.

Ontario Retailers Will Foregather

First Annual Convention Will Likely Take Place in Toronto During Progress of Exhibition

The Lumbermen's Section of the Toronto Board of Trade held a meeting recently at which it was decided to invite the Ontario Retail Lumber Dealers' Association to hold a convention in Toronto during the Canadian National Exhibition. The members of the Toronto trade had learned that it was the intention of the Association to hold a convention during the late summer and were unanimously of the opinion that it would be a good step to hold it in Toronto during the Exhibition. By way of doing their share towards assisting in making the event a success, the motion which was carried by the Lumbermen's Section of the Board of Trade, expressed the desire of the wholesalers and retailers of Toronto to have an opportunity of entertaining the visitors when they are in Toronto.

The proposal has been considered by the directors of the Ontario Retail Lumber Dealers Association, and without exception they have agreed that the plan is a good one. Accordingly arrangements are already under way for the first annual convention of the Association. The idea at present is that the convention shall consist of business meetings in the morning and afternoon, followed by a dinner in the evening, at which the visitors will be the guests of the Toronto trade. It has not yet been possible to plan the programme in detail, and it may be found advisable to hold a two-day convention. It is expected that a large attendance will be secured, as the Canadian National Exhibition will give the members of the Association an additional reason for visiting Toronto.

"In the Cause of Human Rights"

At the recent annual convention of the National Wholesale Lumber Dealers' Association, in Chicago, an interesting part of the proceedings was the reading of the resolution passed by the Canadian Lumbermen's Association at the last annual meeting, held in Montreal.

It was as follows: At the tenth annual meeting of this Association a resolution was unanimously adopted and instructions given the writer, Secretary Frank Hawkins, of Ottawa, to forward same to all lumber associations in the United States.

We shall be pleased to receive an expression of opinion from you and trust that the cordial relations which have existed and now exist between the United States and Canada may long continue.

Resolved:

That whereas, since our last annual meeting the United States of America has declared war on Germany and Austria-Hungary, and has now become the ally of other nations also at war with Germany and Austria-Hungary, Now, therefore be it resolved:

That, the Canadian Lumbermen's Association assembled in Montreal, at its tenth annual convention, send hearty greetings to, and welcome our fellow-lumbermen in the United States, as allies of those who are fighting a common enemy, in order that freedom, and security of person and property, may be the portion of man throughout the world.

That copy of this resolution be forwarded to all lumber associations in the United States.

The resolution passed by the National Wholesale Lumber Association was:

Whereas, our Association is the recipient of friendly resolutions of greeting and approbation in recognition of our relation as allies in fighting a common enemy of humanity and freedom, therefore be it

Resolved, that we reciprocate the greetings of our Northern Brother Nation and assure them of our loyal devotion to our common cause of human right and justice and record our admiration of the noble service already rendered by our Canadian Allies.

No Changes will be Made in the Service

Wm. Laking Lumber Co. and Riverdale Lumber Co. Continue Under Direction of Same Experienced Staff

There are no changes in the personnel of the Wm. Laking Lumber Co. and the Riverdale Lumber Co., 677 Queen street east, Toronto, owing to the death of Wm. J. Hetherington, general manager of the companies, which took place recently. It is understood that the duties of general manager, formerly discharged by Mr. Hetherington, will be looked after in part by Wm. Laking, President of the organizations, who while he lives in Hamilton, will make frequent business trips to Toronto, and by George Kinnon, who has been associated with the wholesale end for fifteen years, and by Hugh Brennen, for nine years in the retail end. Both Mr. Kinnon and Mr. Brennen were the "right hand men" of Mr. Hetherington, and are widely and favorably known to the trade. Mr. Kinnon is a Toronto boy, who has a thorough insight into the lumber game, and previous to joining forces with the Wm. Laking Lumber Co., was with the old Imperial Lumber Co. for four years. Since 1903 he has had charge of the yards of the Wm. Laking Lumber Co., whose piling grounds are at the foot of Spadina Ave. Hugh Brennen come of a lumber family, his father and grandfather being in the business. He is a son of E. S. Brennen, of Hamilton, who is now in the fuel business, but for a long time was in the lumber line. After serving

and limits in that vicinity. The mill, which has a capacity of thirty-thousand feet a day, is a water-power one, equipped with live rollers and a circular saw. Some four years ago it was burned to the ground and the present structure erected, an illustration of which appears in this column. The manager of the plant is Owen McAvoy. It will be remembered that a year ago last spring John Laking, the only son of Wm. Laking, and also a former Reeve of Haliburton village, was drowned in Drag Lake during the progress of a storm which overturned his canoe while he was out attending to the closing of the camps of the company.

John P. Waters of Burk's Falls, who has been with the Wm. Laking Co. for several years, continues as buyer, the same as under the old arrangement, while M. L. Smith of Guelph will still be identified with the selling-end, having been in the service for a long time.

New Match Industry for Vancouver

Match making is an industry which is practically new to British Columbia, but will no doubt become firmly established in the near future. The Hall Match Company, of Vancouver, established at 632 Sixteenth Avenue East, controls much of the city's trade in matches through being able to sell cheaper than the imported article can be sold for. Formerly it was unable to do this, but machinery has now been installed whereby the company gets its alder match wood right from the log, thus cutting down expenses materially. Some difficulty has been met with in obtaining a sufficient supply of chemicals on several occasions, the factory having to close down for a short time from this cause. At present the company is able to take care of the Vancouver demand only, but in the near future it is expected that the business will be extended to all points in the province.

Some Heavy Purchases of Season's Cuts

It is learned that during the past few days there have been some heavy purchases of season's cut at record prices. The output of red pine of Chew Bros. of Midland, which will amount to about two million feet, has been bought by Terry and Gordon, Toronto, who have also contracted for half of the production of white pine from the same firm, their portion being about two and a half million feet. The remaining two and a half million feet of white pine of Chew Bros. has been taken by the C. G. Anderson Lumber Co. of Toronto.

Campbell, Welsh and Paynes, Toronto, have bought the entire white pine cut of Pratt & Shanacy, Midland, for the season, which will exceed four million feet. It is also understood that the Oliver Lumber Co., of Toronto, purchased over a million feet of hemlock during the past few days. Other large Ontario deals are now pending, and, from the quotations which prevail, it would indicate that wholesalers do not anticipate any decline in values. The recent heavy purchases would seem to point to a strengthening of the market.

It is said that one of the biggest operators of white pine on Georgian Bay lost a raft of logs recently and that the loss will run into a hundred thousand dollars unless much of the timber is recovered.

Forest Fires are Reported Threatening

Word received recently by R. G. Chesbro, Toronto, representative of the Victoria Lumber and Manufacturing Co., Chemainus, B. C., was to the effect that serious forest fires had been raging along the new logging road of the Company above Ladysmith, and that the flames were causing the smoke to settle in thick clouds over the atmosphere. No rains of any importance had fallen since May, and moisture was badly needed. The Victoria Lumber Co. have sold their powerful steam tug to the Canadian Pacific Railway. There has been great difficulty in getting sufficient deck hands to operate the steamer.

Retail Lumbermen Visit Montreal and Ottawa

The annual educational trip of the retail lumbermen of Toronto is being held on July 13 to 17 to Montreal and Ottawa, and a representative company left by boat on the 13th inst. for the former city, where they will spend a day or two. They will then go to Ottawa and return to Toronto by train. Two years ago the retail lumbermen enjoyed a profitable and instructive visit to the trade in Detroit, and last year journeyed to Syracuse and other cities. Among those having the arrangements in hand are J. B. Reid, chairman of the Lumbermen's Section of the Toronto Board of Trade, Walter C. Laidlaw, who supervises the transportation arrangements, and others.

According to W. P. Hinton, vice-president and general manager of the Grand Trunk Pacific Railway, work will commence at an early date at Prince Rupert on the construction of at least eight steamships of 8,500 tons each. The vessels will be built by an American company using the great drydock and plant at that port.

The Laking saw mill at Haliburton, Ont. Mr. Laking is seen standing on the left.

several years with his father, he came to the Riverdale Lumber Co. with which he has been identified ever since. He is well liked and well thought of by the customers of the firm.

The history of the formation of the Wm. Laking Lumber Co. dates back about twenty years when a partnership was formed between Mr. Laking and the late Mr. Hetherington, which continued uninterrupted until the recent death of the latter. The office was first opened at 100 King street west, and as business grew rapidly, some eight years later it was decided to inaugurate a retail organization, which was done under the name of the Riverdale Lumber Co. Offices were opened on Queen street, just east of the Don river, and about a year later the offices of the Wm. Laking Lumber Co. were removed to the same address. The concerns are distinctive and separate in their operations, the activities of the Wm. Laking Lumber Co. being strictly wholesale while the retail end is looked after exclusively by the Riverdale Lumber Co., who operate a planing mill and have one of the neatest and best kept yards in the Dominion. The storage sheds are spacious and well lighted and the sorting facilities unsurpassed. The roadways are wide and clean and every pile of material is distinctly labeled so that no mistakes in filling orders can arise. Motor trucks are used for delivery purposes and a large stock of mouldings, sash, doors, frames and interior trim generally kept on hand. The shed for the storing of mouldings has lately been provided with a lantern roof.

One of the maxims of the late Mr. Hetherington was neatness, order and arrangement and this principle was faithfully carried out. The Wm. Laking Lumber Co. specialize in hardwoods, and all kinds of soft woods are handled by the Riverdale Lumber Co. Mr. Laking the head of both companies, is a former resident of Haliburton village, of which he was Reeve. He owns a well-equipped saw mill

Shipbuilding Notes East and West

Many Large Wooden Vessels Launched, While Production is Being Speeded up all Over

A contract has been drawn up and is about to be signed between the Federal Government and the St. John Drydock and Shipbuilding Company providing for the construction of a drydock on Courtenay Bay. The Government will pay an annual subsidy of $4\frac{1}{2}$ per cent on \$5,000,000 for 35 years.

The wooden steamer, "War Quebec," was successfully launched at the yards of the Quebec Shipbuilding and Repair Company on the St. Charles River recently, before a large gathering of citizens. The vessel was blessed by the Rev. Father Scully, C.S.S.R. Mrs. Dan McLaughlin, of St. John, N.B., wife of the superintendent of the shipyard, christened the ship.

An order to build two large tugs for the Imperial Munitions Board, Department of Aeronautical Supplies has been placed with the Westminster Marine Railway Company. These vessels will be 125 feet long and about 200 tons, and will be the largest ever built at the yard. They are intended for towing spruce logs down the coast from the camps in the Queen Charlotte Islands, to be sawn into aeroplane lumber. While they are under construction, about sixty men will be employed at the yard. Work has already commenced. The keel blocks are being laid, and other preliminaries are under way. It will be necessary to equip the yard with a new band saw and an air compressor in order to handle the work.

A New York despatch says that a syndicate of Canadian and American interests will construct ten steel ships of 8,800 tons each at Prince Rupert, B. C., at a cost of approximately \$16,000,000. The steel is to be fabricated in Pittsburg and assembled in Prince Rupert at the floating dry dock of the Grand Trunk Pacific Railway. It is stated that the new company has leased the dry dock for five years for shipbuilding purposes.

The largest salt water vessel, the Alaska, ever constructed in Canada, and the first of the big fleet to be built by J. Coughlan & Sons, recently made a successful trial run on English Bay at Vancouver. The event marked a new era in steel shipbuilding. The Alaska is 427 feet long and 54 feet beam, moulded depth, 29 feet 9 inches; draft, 24 feet 2 inches; speed, 11.1-12 knots; gross tonnage, 5730. The propelling machinery consists of one high-pressure and one low-pressure turbine of the Parsons type, and there are three single-ended Scotch marine boilers.

The United States celebrated Independence Day by launching between sunrise and sunset, more ships than German's submarines can destroy in a month at their present rate of undersea piracy. One hundred ships or approximately 500,000 tons of deadweight tonnage were slipped from their ways. Without holding back a single ship in order to swell the number for Independence Day launching, the ship workers by brawn and sacrifice made ready one hundred vessels. These, if completed at the same rate of speed which has made possible their launching, will take their place in the "bridge of ships to France," which will maintain the armies to defeat Germany. Twenty-seven wooden ships were launched at Atlantic ports and the Gulf of Mexico, and twenty-six wooden vessels were launched on the Pacific Coast.

Fraser, Brace & Co., Ltd., of Montreal, have launched the War Huron and the War Erie, and will shortly have the War Niagara off the stocks, whilst in a month the War Ottawa will also be launched. These four wooden ocean-going vessels are of 3,100 tons deadweight capacity each.

The British Admiralty announces that during the month of June 134,159 gross tons of merchant shipping was completed in the United Kingdom yards and entered for service.

The Government decided last year that a real lifeboat was necessary for Toronto, and work was commenced last October on an up-to-date, power, self-righting boat, capable of going out into the lake in bad weather. The boat is being built by Rickey Brothers, Laing street, Toronto, but is not expected to be ready for sea this summer. The craft is built of mahogany and oak, but the construction is very slow.

The schooner "Gaspé Trader," built by H. A. Ellis for himself and partners, was successfully launched at Barachois, Que., recently. This vessel is built solely for freighting purposes and is expected to carry around 400 tons and will very likely trade from Montreal and Quebec to the Gaspé Coast and Newfoundland. She will go to Gaspé to be rigged and engined and will be in commission around the latter part of July. Her measurements are: Length 120 feet over all; 29 feet beam and 10 feet depth of hold and registers a little over 900 tons gross. The vessel will have two masts, will be ketch rigged, having three sails and will be powered with two Fairbanks-Morse Semi Diesel crude oil engines of 75 horse-power each driving twin screws. She is equipped with patent steering gear and gasoline engine for

hoisting anchors, cargo and sails and will be electric lighted throughout. The construction of the vessel was started during last winter, and the hull was completed in about three months. The timber used in the construction of the vessel is all native Gaspé wood with the exception of the Oregon Pine used in the top, sides and water ways.

It is expected that the wooden steamer War-Ontario, which was launched recently at the new shipyards of the Toronto Shipbuilding Company, will be ready for her trial trip three weeks hence. The War-Ontario, constructed for the Imperial Munitions Board, was the first vessel to be launched at the new plant in Toronto. Her engines and machinery are ready to be installed. The War-Ontario is a 3,000 ton boat, with $43\frac{1}{2}$ feet beam and 25 foot-hold. She will be equipped with a telescopic wireless mast, stern gun, four cargo hatches, five steam winches and a deep water ballast tank with 380 tons' capacity. Accommodation for officers and crew is provided in the bridge fore-castle. The ship is constructed of British Columbia fir. The keel is 20 by 24 inches, and two sister keelsons are 20 by 20 each. The whole boat contains 1,500,000 feet of lumber and is said to be worth half a million dollars. The rudder is six feet wide and weighs three tons. The propeller is 14 feet by 6 feet. The War-Ontario is the first wooden vessel to be built in this part of Ontario for war purposes.

The wooden steamer War Nicola at the William Lyall Shipyards, North Vancouver, was recently launched. The launching, under the direction of Mr. Frank Davey, superintendent of the yard, was carried out without the slightest hitch, as has been the case with every vessel turned out by the company. The War Nicola is the fifth vessel of the six being built at these yards, the sixth and last one of this order, the War Squash, being ready to launch any time.

Logging Congress Meets in December

The tenth session of the Pacific Logging Congress will be held in Portland during December. The exact dates will be announced later. The reason for the date being later than customary is to permit as large an attendance as possible of logging operators and superintendents. At this season of the year their enjoyment of the Congress proceedings will not be marred by fear of forest fires at the camps during their absence. Then, too, at this period of the year a large number of the pine logging operations have closed down for the winter, thus permitting the attendance of delegates who must necessarily come greater distances than the fir men.

The welfare dinner, which has always been a feature of the Congress, will be given, as usual, under the direction of John A. Goodell, of Portland, industrial secretary of the Y.M.C.A.

President W. W. Peed and Secretary Geo. M. Cornwall are preparing a programme which they believe will excel all previous efforts. The Congress now has a membership of nearly 300 and continues to grow year by year. The membership list includes operators in British Columbia, Washington, Oregon, California, Idaho, and Montana.

Would Have All Useless Dogs Destroyed

Writing to the "Canada Lumberman" a leading mill man thinks that the Food Controller of Canada might do a wise thing if he had all useless dogs destroyed. He says that every village and town in the country is feeding a band of useless curs on food that would produce eggs and pork. "Take for instance," he adds, "hounds that are kept three hundred and fifty days in order that they may be used for fifteen annually to help their owners murder deer. There are too many good-for-nothing canines kept in Canada, and the sooner our authorities wake up to this fact the better. I like to see real practical moves adopted and not a lot of sensational, irrational and visionary regulations made."

Heavy Shipments of B. C. Lumber

Lumber shipments from British Columbia to offshore points have shown a big increase this year and for the six months ending June 30 the quantity of lumber exported on ships amounts to 24,806,297 feet. The half year is, therefore, better than for the whole of 1917 when the amount of lumber shipped from Vancouver overseas was 18,083,622 feet.

The building of the Robert Dollar Line sawmill on Burrard Inlet has been responsible for part of the increased activity for this mill has shipped 7,700,000 feet of lumber to China since the first of the year. Australia comes next with 5,535,934 feet; then California with 3,150,000 feet; South Africa with 2,325,523 feet; South America 1,261,400 feet, and Japan 500,000 feet. There was also a special government cargo of 4,333,438 feet sent to Europe and a shipment of 68,000 box shooks sent to Singapore.

There is no reason to doubt that the activity will keep up for the balance of the year and that the total for 1918 will equal, if not exceed, the figures of pre-war days.

Will Spruce Pulpwood Soon Be Exhausted?

Some Startling Facts Brought to Light—An Unenviable Position for an Intelligent People—What Leading Authorities Say on Canada's Supply

By Wm. Little, Westmount, Quebec

I wish to corroborate the statements made by the Hon. Senator William C. Edwards, Chairman of the Committee of Forests of the Canadian Commission of Conservation, and Mr. James White, Deputy Head of the Commission, calling public attention to the serious condition of our forests on this side of the Rocky Mountains, owing to our past imprudence, and deprecating the mischievous misrepresentations made by timber cruisers in Eastern Canada and the United States, who have grossly over-estimated our supply of spruce pulpwood timber by stating that we had in the East a supply for fifty years, when investigation has proved that between thirteen and fourteen years would be nearer the limit, with the result that America must now look to west of the Rockies for its supply of pulpwood.

We are, of course, regularly regaled with lengthy dissertations on the magnificent forests near the Pacific Coast of British Columbia, as if these were in our backyard, instead of nearly 3,000 miles distant, with two high mountain ranges intervening, but in so far as the Provinces of Ontario, Quebec and other Eastern Provinces are concerned, they might be fully as well in Texas or Louisiana, from where we are now getting ordinary building timber at a cost about four times that we should have had to pay for it from the Ottawa River if we had not been imprudently sacrificing it at one-tenth of its real value.

I may say that I have been recently favored with the valuable reports of Mr. Clyde Leavitt, Chief Forester, and Mr. C. D. Howe, Faculty of Forestry, Toronto University, both of whom corroborate the statements made by Hon. Senator Edwards and Mr. James White as to the scarcity of spruce timber in Eastern Canada, and the United States east of the Rocky Mountains. Dr. Howe has dashed to pieces the false assumptions promulgated by empirics who are deluding the public by the solatium that these forests will be restored by natural reproduction in less than a century, some even fixing the time at about thirty years, when he says, in his report, in answer to the question: How fast does a forest rebuild itself? That during the past summer he made a study of the reproduction and growth of the pulpwood species after logging in the St. Maurice Valley, Quebec, on behalf of the Commission of Conservation, that produced the following conclusions. "Over 2,000 trees were analyzed to determine the rate of growth in diameter, height and volume. While the results of this study have not yet been tabulated, they have gone far enough to justify the statement that within the forest type under consideration it takes about forty years for the little spruce trees to acquire the diameter of one inch; one hundred years to make six inch trees, and one hundred and fifty years to reach the minimum diameter limit of twelve inches established by the cutting regulations in Quebec for white and black spruce." And elsewhere he tabulates the rate of growth of the young spruce trees as follows: There are 635 spruce seedlings per acre up to 1 inch in diameter; 99 saplings, 1 to 4 inches in diameter; 30 poles 4 inches to 8 inches in diameter on the stump. Then referring to the mortality rate of these little spruce trees he says:—"There are 635 spruce seedlings per acre, but when they get up near commercial size they are all dead but six."

This is an object lesson for those who are trying ignorantly or otherwise to delude the public by falsely conjecturing that all the time required for the natural reproduction of spruce pulpwood in the forest is only about thirty years, when those who know the facts directly state that it actually requires about forty years for these little spruce trees to grow to 1 inch in diameter for natural regeneration in the woods.

Some Figures that are Significant.

That Dr. Howe's figures are fully corroborated by Mr. Leavitt is shown by his reproducing them in his own Report of Forest Progress in Canada for 1917. In his report, p. 19, he also says: "On areas lumbered earlier than fifteen years ago, no balsam was cut. In cuttings from 10 to 15 years old, 65 per cent and 35 per cent, respectively, were spruce and balsam. In cuttings 5 to 10 years old, 45 per cent. were spruce and 55 per cent. balsam, while in cuttings less than five years old the proportion is 22 per cent spruce to 78 per cent. balsam." Evidently if the same rate of retrogression in the percentage of spruce to balsam has continued to the present time, the entire stand of spruce timber in this locality has now been cut, leaving only the greatly inferior balsam to become the pulpwood stock for future paper-making, which may, to some extent, account for the flimsy,

brittle character of the ordinary newspaper issued to-day as compared with those printed fifteen years ago.

The phenomenal rise in the price of all kinds of spruce lumber in the past twenty years, due to the growing scarcity of pine timber, for which it is now being substituted, together with the great demand for spruce pulpwood, has caused a scarcity of spruce timber, all of which is emphasized in an item in "The Canada Lumberman," April 15, which mentions: "Some big sales of white pine, red pine and spruce sawlogs at a heavy advance over last year's quotations. It is understood that one Ontario concern disposed of several millions of feet of white pine logs at over \$39 per thousand feet, while red pine brought \$34 and spruce \$35. These are possibly the highest prices ever paid in the trade."

Comparing the price of spruce lumber now with that of 1899 shows an enormous increase in price in all kinds of spruce, from \$10 to \$15 per thousand, which was about the price paid in 1899, to the prices now asked for spruce flooring, shows a rise of from \$20 to \$30 per thousand feet, the present prices being quoted at from \$32 to \$46 per thousand feet for flooring.

Ignoring the Public Entirely.

Whoever will carefully read the evidence given in the quadrilateral controversy that has for many months been carried on before Mr. Robert Pringle, K.C., Paper Controller, to decide how to equitably adjust the profits on the production of newsprint between the pulpmaker, the paper maker, the printer and the publisher, and the Government (for it is usual in late years to entirely ignore the public) will, I am sure, be convinced that a spruce pulpwood famine is not only in sight, but is actually at hand, when spruce sawlogs are sold at \$35 per thousand feet.

In another part of Dr. C. D. Howe's report he states: "For thirty years, in meetings similar to this, we have been discussing the management of our timber resources, but what have we accomplished? For example, what do we really know about the extent of the timber and pulpwood resources of Ontario and Quebec, though these provinces combined contain the largest timber area in Eastern Canada?"

"It now has along its borders a population of 5,000,000, whose consumption of wood products is increasing every day, and just over the fence are the populous Eastern States, with their urgent demands for Canadian wood products. In the face of constantly widening markets and increasing demands, have we really made any methodical sustained effort to determine the possibilities and potentialities of the timber resources of Ontario and Quebec? The United States is thoroughly alarmed over its declining pulpwood supply; we are so ignorant of ours that we do not know whether to be alarmed or not. Is that an enviable position for an intelligent and progressive people?"

Too Much Dirt Contained in Oats

Recently a Pennsylvania man, who returned from Norway, told a story of how a coal company, owing to war conditions, had no oats to feed the mules at the mines. There was some talk of killing the animals instead of them being allowed to starve to death, when a steamer suddenly arrived with a cargo of "paper oats," a feed substitute from Germany. The mining company had bought two tons of the substitute provender and expected that the mules would refuse to eat the camouflage stuff, but they took a liking to the new diet and actually thrived on it.

"This story may sound all right so far as mules and Norway are concerned," remarked a leading Northern lumberman this week, "but there is right at home one matter of grave importance to which I wish you would direct attention. It is the dirty oats that we have to pay our good money for. I have taken as high as ten per cent. in dirt out of western oats. Now, just think of it! In the first place, the farmer has no moral right to palm off dirt at an oat price, and then look at the coal that it requires to make steam to haul this dirt hundreds of miles and the horse power that it requires to draw it back a great distance into the woods and the injury it is to the horses to which it is fed."

The Town of Warner, south of Lethbridge, was almost completely wiped out by a fire which did \$250,000 damage recently. Among the places destroyed were the lumber yards of Bicker and Yates.

Urge Selling at Reasonable Prices

Wholesalers and Retailers Should Avoid Profiteering and Assist Government in Every Legitimate Way

The National Bureau of Wholesale Lumber Distributors, Washington, has sent out an interesting announcement:

In connection with the price-fixing on both yellow pine and fir lumber the War Industries Board has seen fit to fix maximum prices for the manufacturer leaving free to sell without any price regulation both the wholesale and retail distributor of lumber. In coming to this decision the War Industries Board suggest that all sales made by distributors should be at reasonable prices based on a strictly legitimate margin over and above the fixed, itemized mill price, and in leaving both the wholesaler and the retailer free to sell without limit the War Industries Board has expressed its confidence that the trade would abide by the spirit of the order and confine their sales to within a reasonable limit.

Every responsible wholesaler and retailer of lumber should avoid profiteering and assist the government by regulating their sales within such reasonable limit and should not ask exorbitant profit from the consuming public.

Members of the National Bureau of Wholesale Lumber distributors are most anxious to assist the Government and to conduct their business in such a way as to avoid the necessity of any future regulations or restrictions as to sale price. They also feel it is the duty of every agency serving the consuming public to give full publicity to this situation and help avoid profiteering and consequently price regulation which is bound to follow such practice.

In a further bulletin, after explaining the results of the government's deliberations, certain frank comments are made and the following recommendations:

Every wholesaler owes it to his country to serve his regular trade to the best of his ability, and when his trade is indirectly serving the Government the wholesaler must confine such sales within the maximum f.o.b. mills basis.

Every wholesaler should endeavor especially to serve the railroads or other Government agencies, which are continuing their purchases in the open competitive market. Arrange to take the railroad business and keep your price within the maximum list, giving the railroads the advantage of any lower price you are able to quote. This will be to the credit of the wholesaler.

In selling commercial trade remember that a legitimate profit is all that any wholesaler is entitled to add and we recommend that our members limit sales to the commercial trade to a reasonable percentage above the maximum mill price, providing this margin will permit the usual services being rendered to the consumer.

Unless discretion is used and the wholesaler shows a disposition to do his part to serve the public and the Government, without profiteering, strict sales regulation is bound to follow and discredit will be reflected upon our members and wholesalers in general. Please advocate these policies to all wholesalers even though they are not members of our Bureau. Now is the time for the wholesaler to prove his economic necessity and his patriotism by assisting the Government and its agencies in carrying out the spirit of the Government's orders regulating prices.

National Hardwood Rules Still Govern

The proposed changes in the inspection and grading rules which were brought up at the National Hardwood Lumber Association in Chicago, recently, elicited a lively debate, but the following resolution settled amicably the matter of one set of inspection rules for hardwood lumber.

Whereas, it is evident that abnormal conditions due to the war have resulted in greatly increased demands for the bonded certificate of this Association; and

Whereas, the difficulty of obtaining a sufficient force of competent inspectors to meet this demand is now apparent; be it

Resolved, that it is the sense of this meeting that members will refrain in so far as possible from making sales necessitating the bonded certificate at point of origin, and only demand inspection service for the adjustment of differences arising after inspection and measurement of shipment have been reported; and be it further

Resolved, that the attention of the Board of Directors be called to the necessity for the strict enforcement of the following clause in the Inspection Service Regulations:

"This Association possesses no authority to impose its inspection in any of the markets, except through the mutual agreement of parties at interest; therefore, unless it is explicitly stated in the contract of sale or purchase, that the lum-

ber concerned in the transaction is subject to National inspection, such inspection cannot be insisted upon by either buyer or seller, and can only be made available by the mutual consent of both parties after a dispute has arisen."

and

Whereas, the mutual interests of the United States Government and the Hardwood Lumber Trade demand a single standard for the inspection and measurement of Hardwood lumber; be it

Resolved, that the members of all hardwood lumber organizations be urged to use only the inspection rules of the National Hardwood Lumber Association.

Great Call Issued to Build Ships

The Imperial Munitions Board, Ottawa, is inserting large advertisements in leading papers, stating that tradesmen are wanted in shipyards, under the heading "Help Build Ships." The announcements set forth the class of tradesmen needed and say: "If exempted from military service you can still help win the war. Shipbuilding in Canada is a fast growing industry. Sufficient numbers of skilled shipbuilders are not available. It may be that the trade you follow is closely allied to one of the trades necessary for shipbuilding, if so your patriotic duty is clear. Join Canada's shipyards if you are not engaged in farming." A list of the steel shipyards and wooden shipyards in the Dominion is given. The wooden shipyards comprise the following: The Great Lakes Dredging Co., Limited, Fort William, Ont.; Toronto Shipbuilding Co., Limited, Toronto, Ont.; Fraser, Brace & Co., Limited, Montreal, Que.; Three Rivers Shipyards, Limited, Three Rivers, Que.; Quinlan & Robertson Limited, Quebec; Quebec Shipbuilding Co., Limited, Quebec; The Southern Salvage Co., Limited, Liverpool, N.S., and Grant & Horne, St. John, N.B.

Origin of the Cross-Cut Saw

When the cross-cut saw was first originated its inventor was put to death and its users were maltreated because it was feared the use of a saw would rob others of their means of livelihood. The origin of the saw, as told in Greek mythology, was related by J. W. Moate of E. C. Atkins & Co., at the convention of the Appalachian Logging Congress at Huntington, W. Va.

Talus was the son of Daedalus' sister and was placed under Daedalus to be instructed in his art. Talus was of an inventive turn of mind and once having found the jaw bone of a snake he employed it to cut through a piece of wood. His success in cutting the wood led him to shape a piece of iron for the same purpose.

Talus' invention aroused the envy of Daedalus, who put him to death.

The saws of the ancient Greek carpenters are shown in a painting still preserved among the antiquities. Two genii are represented at the end of a bench. A piece of wood is secured by thongs. The saw resembles the wood or bucksaw of the present day except that it is larger and is much like the saws now used in parts of the Philippines. It consists of a square frame having in the middle a blade, the teeth of which stand perpendicular to the plane of the frame. The timber to be sawed extends beyond the end of the bench. One of the workmen stands on top while the other sits under the bench, each grasping a handle and working the blade up and down.

New Method of Scaling Lumber Proposed

A new lumber scale for New Brunswick is one of the probabilities for next year. This matter was discussed recently by the advisory commission and a recommendation that a new scale be determined will be made to the Legislature at next session. The lumber scale in use has not been altered for 75 years, and it is thought that changed conditions warrant the creation of a new one.

Another matter of considerable importance and which is connected with the scaling of lumber is the uniformity of qualifications for scalers. Up to the present times standard qualifications have been required only of those scalers operating upon crown lands. It will be recommended to the Legislature that uniform qualifications be required for all scalers operating within the province.

News Print Made from Sawdust

Making paper from sawdust has now entered into the practical stage in Great Britain. An Aberdeen (Scotland) newspaper has been printed from this paper, made principally of sawdust at the Donside Paper Mills, Aberdeen. The printing was done in the presence of Mr. F. E. R. Becker, director of the Donside Company, and Mr. G. R. Hall Caine, of the Department of the Government Controller of Paper. The experimental reels were in every respect satisfactory.

Piling Timber to the Best Advantage

How Every Foot of Ground Can be Utilized,
the Whole Forming One Solid Block

Possibly the manner of piling timber in a retail lumber yard described below is not new, but so far as its installation in our yard is concerned, it is original, and we do not know of another yard where it is piled in this way. One great advantage gained, is economy of space covered. Every foot of ground is utilized, the rear end of the piles of various lengths dovetailing together and making a solid block of timber. Another great advantage is its simplicity. Any ordinary laborer without previous experience can load a mixed order, as each length, no matter what the width or thickness, is in one section. The sections progress regularly in numerical order, and the width and thickness also progress regularly from the smallest to the largest, says A. M. Baylis, in the "Lumber Co-operator."

As an illustration we will describe a section devoted to sixteen feet lengths. To this length we have allotted thirty-eight lineal feet of bearings; we begin at the left and pile 100 pieces of 2 x 2, in six stocks, next 400 pieces 2 x 3 in ten stocks, then 75 pieces 2 x 5 in three stocks, then 200 pieces 2 x 6 in four stocks, 50 pieces 2 x 9 in two stocks, 150 pieces 2 x 10 in five stocks, 50 pieces 2 x 12 in two stocks, then, 80 pieces 3 x 4 in four stocks, 50 pieces 3 x 6 in three stocks, 40 pieces 3 x 8 in two stocks, 10 pieces 3 x 10 in one stock, then 64 pieces in four stocks, 50 pieces 4 x 6 in three stocks, 10 pieces 4 x 8 in one stock, 10 pieces 4 x 10 in one stock, then, 5 pieces 6 x 6 in one stock, 5 pieces 6 x 8 in one stock, then 5 pieces 8 x 8 in one stock. The bearings are made of concrete, the distance between the two outside ones being forty feet. We butt 8 ft. lengths against 32 ft., 10 ft. lengths against 30 ft., 12 ft. lengths against 28 ft., 14 ft. against 26 ft., 16 ft. against 24 ft., 18 ft. against 22 ft., 20 ft. against 20 ft.; thus all lengths from 8 ft. to 20 ft. face one driveway 250 ft. long, all lengths from 32 ft. to 20 ft. face the next driveway, in all making a solid block of timber 40 ft. x 250 ft. Over the longest lengths, which, of course, it is impracticable to pile very high, there are yellow pine girders supported by chestnut railroad ties, set one end in the ground, on which surplus stock is piled. This whole arrangement was all worked out on paper before the bearings were made; first a list was made of the average number of pieces of each individual size that we ordinarily would have on hand, then the question of the number of stocks and how high they could be piled without danger of falling, and finally, the amount of space upon the bearings necessary to carry the pile. The bearings were then marked off according to the measure of each pile, each size timbers having its allotted place upon the bearings. Should the stock at any time be larger than the allotted space can accommodate the surplus is piled elsewhere and the fact noted upon a shingle fastened to the regular stock pile.

Sudden Death of Mr. R. L. Clark

Just as the "Canada Lumberman" goes to press word was received in Toronto of the sudden death of Mr. R. Leslie Clark, who passed away in Montreal. Mr. Clark was on a business trip to the east with his father, Edward Clark, when the sad summons came. He was a graduate in medicine, and practiced his profession for some years, but in 1907 entered the service of Edward Clark and Son, Toronto. For two years he was engaged principally in looking after the shipping and other duties, and then devoted his attention to the selling and buying end. In 1909 he became a member of the firm of Edward Clark and Sons. In more recent years he took charge of the United States sales, proving himself a most successful representative. The deceased had been in poor health for some time, but it was thought that he would recover and the tidings of his demise was a great shock to the trade. The late Mr. Clark was unmarried and is survived by his father, Edward Clark, and one brother, A. E. Clark, of Toronto, chairman of the Wholesale Lumber Dealers' Association. The remains were brought to Toronto for interment.

How Long Does Lumber Order Live?

An interesting and timely point is discussed in a recent edition of the "American Lumberman," regarding how long an order lives, more particularly if it cannot be shipped on account of embargoes, car shortage, or other conditions beyond the control of the shipper. A wholesale concern in one of the southern states, state that they have on file a number of orders which could not be despatched to eastern territory during the early part of the year due to car shortage, and now that the car shortage has been somewhat relieved, they cannot ship on account of an embargo, which covers all territory east of Buffalo and Pittsburgh.

The firm add: What we would like to know is, How long are we supposed to hold these old orders on file under conditions set forth above? Our mills insist on moving the stock into territory not under

embargo, and they will no longer hold these orders on file with no prospect of being able to make shipment at any time in the near future. Surely there should be some ruling as to the life of any contract when the same cannot be filled by the contractor on account of conditions beyond his control. Can you, through your paper, give us any light on this?

Apparently on its current contracts it is making some effort to protect itself, says our western contemporary, against the situation described above, inasmuch as its letterhead at the present time carries the following small typed paragraph:

All our sales and contracts are made subject to strikes, fires, accidents, demands or requests of the United States, delays of carriers and anything beyond our reasonable control; orders are accepted subject to cancellation if we are unable to ship on account of embargoes within a sixty-day period from date of order, and upon the happening of any such event or events we reserve the right to cancel all sales, prices and contracts without notice to any one of our election to do so, or our so doing. Delivered prices when quoted mean our F.O.B. prices at points of delivery to the carrier plus the then existing freight charges. Our responsibility ends F.O.B. shipping point. The purchaser must pay all increase in freight rates and governmental taxes. All prices are quoted subject to change or previous sale without notice. No claims allowed unless made within five days from receipt of lumber. This letter having been dictated and not read, we reserve the right to correct all errors occurring therein.

Referring, however, to the question as to orders taken not subject to the above proviso, undoubtedly the inability to ship is a hardship upon the seller, but it must be recalled also that it is a hardship upon the buyer, even upon a rising market. He has a certain interest in the fulfillment of that contract and in the absence of provisions to the contrary had a right to expect performance within a reasonable period. The seller can, of course, usually secure cancellation of such a contract upon a settlement of reasonable damages with the purchaser. We know of no way in which such a contract can be cancelled merely because outside circumstances intervene to prevent the delivery of the lumber at the delivery point indicated in the contract. It is the contract duty of the seller to deliver the goods at that point and it is stated as good law that his physical inability to do so because of his inability to control transportation facilities is not a good defense against breach of contract.

All the above is taking the technical rather than the practical side of the proposition. As far, however, as we know, and in the absence of express provisions to the contrary, the purchaser under such a contract may wait upon it and compel its performance whenever the embargoes shall have been removed.

Such orders, however, are usually not for any specific lot of material in the hands of the seller at the time of sale. Sometimes it is true that this is the case, but usually orders for any given item are so worded that they may be filled with this or that particular part of such item. It cannot be said, therefore, that such a contract holds any specific material at the shipping points, because no specific lot of such material is identified in the contract. The seller may go ahead and ship his lumber into unembargoed territory; and when it is possible to reach this particular purchase it is his duty then to secure or produce the material with which to fill these delayed orders.

Scandinavian Pulp Will Not Compete

Canadian paper manufacturers have no reason to fear after-war competition from Norway and Sweden, according to Lauritz Jensen Dorenfeldt, eminent Norwegian engineer now attached to the Norwegian Legation at Washington, as commercial advisor. He is an expert on the subject of pulp making and in a recent interview, said:

It is true that both countries now have large stocks, especially of sulphite pulp, but the cost of producing these supplies has been larger than in Canada or the United States. Coal has cost us as much as \$75 to \$80 per ton. We have had to compete, in the purchase of wood, with the demand for army purposes, and much that would otherwise have been used in the manufacture of pulp has gone to the western front. The cost of living in Norway is higher than in any other country that I am aware of, and this has, of course, been reflected in the cost of labor. The cost of producing pulp and paper has gone up more in Norway and Sweden than on this continent."

Halifax Plant Will Employ Large Force

The Executive of Halifax Shipyards, Limited, is announced as follows: Chairman of the Board, James Carruthers; president, J. W. Norcross; vice-president and managing director, Roy M. Wolvin; vice-president, M. J. Haney; treasurer, F. S. Isard. Messrs. Carruthers, Norcross and Wolvin have returned to Montreal from Halifax, where they spent a few days completing plans with the engineers for the commencement of work. They inspected both the site of the plant and the drydock which has been purchased and will be enlarged. Some 3,500 men will be required at the plant, and shipwrights now engaged in Halifax and others in the province in wooden shipbuilding will be utilized.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Trimmer Ends Wanted

White Pine, Red Pine and Spruce, 1917 or 1918 cut. Write stating approximately what you have. Give thickness, conditions as to color, worms, etc. Box 738, Canada Lumberman, Toronto, Ont. 10-15

BIRCH AND BASSWOOD WANTED

We will buy large quantities of 1 1/2 and up. No. 2 Common and Better, log run Birch, with none of the best lumber removed. Also No. 2 C. and B. Basswood. Terms cash. P. O. Box No. 1595, Montreal. 14-17

For Sale-Lumber

WANTED to buy logging equipment for operation on Canadian Pacific Railway, Box 756. 13-14

Shingles — Lumber

Several cars Ontario Full Count Cedar Shingles, well manufactured and graded.

One Car 2 x 4 No. 1 Hemlock.
75 M 2 x 6 to 12 in. No. 1 Hemlock.
60 M 1 in. No. 2 Hemlock.
2 Cars 5/4 in. M.R. White Pine, Dry.

Enquiries solicited. Prices reasonable.

A. F. CAMPBELL & SON,
Arnprior, Ont. 14-14

Lumber For Sale

Two cars 4 x 4 Maple Boxed Hearts.
One car 5 x 5 Maple Boxed Hearts.
One car 6 x 6 Maple Boxed Hearts.
Seven cars Fir Doors.
Three cars Fir Columns.

GEO. C. GOODFELLOW,
Montreal, Que. c

For Sale-Lumber

Would like to hear from U. S. or Canadian parties requiring Spruce and Balsam or Peeled Poplar Pulpwood with best quotations F.O.B. Kenogami Lake Siding, New Ontario, T. & N. O.

W. J. POST,

13-14 Kenogami Lake P.O., Ont.

For Sale

Few cars Cedar Poles, 25 to 35 feet.
Car lot Rock Elm Piling, 20 to 40 ft.
Car lot Cedar Squares, 8 x 8 to 12 x 12--8 to 14 ft.

LYNCH & RYAN LUMBER CO.,

14-17 Marmora, Ont.

Machinery For Sale

Boiler for sale, Goldie & McCulloch, 60 in. x 14 ft.

GUELPH LUMBER COMPANY,

11-15 Guelph, Ont.

Steam Equipment For Sale

Steam Power Equipment in A1 condition, consisting of the following:

BOILER

1—Horizontal Fire Tube, Goldie & McCulloch 60 in. x 14 ft., 74 3-in. flues, 100 lbs. normal pressure.

ENGINE

1—Goldie & McCulloch "Ideal" tandem compound horizontal, style T.C. 10 in. and 16 in. x 12 in. stroke, 100 lbs. pressure, 300 r.p.m., 60 in. x 10 in. flyball governor wheel and 60 in. x 12 in. belt pulley.

ADDITIONAL EQUIPMENT

2—Belt-driven Goldie & McCulloch Condenser and Pump; Horizontal Action.

1—Horizontal Feedwater Heater, Goldie & McCulloch No. 18.

1—Vertical Belt-driven Feed Pump, with loose pulley and adjustable crank.

All of the above equipment is in first class shape and was removed to make room for a sub-station of the Hydro-electric Power Commission. For further information address,

The Smith's Falls Hydro-Electric System,
11-14 Smith's Falls, Ont.

For Sale

Steam Log Hauler, only used one season, in best of order.

Eighteen pairs of sleds, spare parts. Also yarding and loading equipment. Now at a railway station.

MURRAY & GREGORY, LTD.,

11-t.f. St. John, N.B.

For Sale

20 logging cars equipped with two 4-wheel trucks, air brakes, standard gauge, wheels 24 ins. in diameter.
17 extra trucks for the above cars.
10 extra air brakes for above cars.
1 Locomotive, standard gauge, 56,000 weight.
250 pieces of 45 lb. rail in number 1 condition.

BISHOP LUMBER CO., LTD.,

14-15 Nesterville, Ont.

Steam Engines for Immediate Sale

Suitable for general mill work, power transmission by belt, rope drive or spur gearing, for driving woodworking, grinding, crushing, or hoisting machinery, or air compressors, in factories, saw mills, pulp and paper mills; ship yards, munition works, mines, grain elevators, etc.

2—500 h.p. vertical cross compound, 4 valve engines with shaft governors, cylinders, 18 and 24 x 24 in., 150 r.p.m., with surface condensing equipment for each engine.

1—900 h.p. vertical cross compound, 4 valve engine with shaft governor, cylinders, 20 and 38 x 24 in., 150 r.p.m., without condenser.

2—600 h.p. horizontal cross compound, Corliss engines, 18 and 34 x 42 in., cylinders, 100 r.p.m., with separate surface condensing equipment for each engine.

1—1200 h.p. cross compound Corliss engine, cylinders, 26 and 52 x 48 in., 85 r.p.m., with surface condensing equipment.

2—1200 cross compound Wheelock gridiron valve engines, cylinders 27 and 52 x 46 in., 90 r.p.m. One surface condensing equipment for the 2 engines.

These engines now have electrical generators mounted upon them which the present owner wishes to keep. Generators to be removed from engine shafts and engines sold without them.

These engines could be fitted with new drive wheels for either belt or rope driving, or with spur gearing, making them available for any kind of factory duty.

The 1200 h.p. Corliss engine is an especially heavy machine. All of them have been operated at 135 pounds steam pressure and about 25 in. vacuum.

There is also 1 250-h.p. Wheelock type, cross compound type engine, cylinder 16 and 27 x 40 in., with belt flywheel and surface condenser.

These engines are to be sold as they stand. Overhead hand traveling cranes in place available for dismantling.

Purchaser to make his own inspection, to have access to all available records, and to remove engines and condensing equipment at his own expense. The air and circulating pumps to accompany the condensers.

If prompt possession of any or all of these engines is desired, time will be saved by the Purchaser sending his representative here without delay.

Correspondence is desired only with parties who have immediate use for any or all of these engines.

Great Output of Fir Pledged.

Fir lumber manufacturers of Oregon and Washington in convention at Tacoma, have pledged themselves to furnish at least 600 cars of airplane fir per month to the Government cut-up plant at Vancouver, Wash., and to speed up solid train loads of cantonment stock to eastern destinations in record time.

Practically the entire membership of the West Coast Lumbermen's Association was in session and telegrams were read from Washington, D.C., advising that the Government requirements for the next few months exclusive of airplane stock will aggregate 170,000,000 feet of fir. Of this quantity orders for 60,000,000 cantonment stock for use at Battle Creek, Mich., Rockford, Ill., and Des Moines, Ia., already have been placed with the fir production board at Portland and Seattle and will be distributed among the mills immediately.

Additional orders to be placed within the next few weeks will call for 60,000,000 feet for refrigerator

cars, 25,000,000 for the Navy and 35,000,000 feet for construction of Daugherty type vessels in eastern yards.

To meet the suggestion of competing lumber producing districts that the fir manufacturers might not be able to make deliveries on time, the meeting, by a rising vote, decided to make up solid train loads every day for fast train dispatch across the continent. The railroad administration will be asked to furnish the cars and mills will promise to fill them as fast as they are furnished.

At the rate of delivery promised by the manufacturers the Vancouver plant will be able to cut fully 9,000,000 feet of fir airplane stock a month.

Saw Mill Machinery FOR SALE

The following machinery is in good condition and is the balance of the Wm. Peter Estate Saw Mill at Parry Sound.

Write for quotations on any or all of this equipment.

- 1 Wicks Oscillating Gang Saw, 20-inch stroke, 37 saws wide, made by Wm. Hamilton Co., Peterboro, complete with live rolls, front and rear, spare set of Brasses for both ends of Pitman rod, 1 spare oscillating side, and 1 spare slide.
 - 1 right hand Allis Band Mill, single cut, 9 ft. wheels, Waterous Co.
 - 1 left hand single cut Allis Band, 9 ft. wheels, Waterous Co.
 - 1 right hand 3-Block Carriage, 40 inch, fitted with Payette set works, friction receder, 5 trucks, frame of carriage oak; never been used, except set works, which have been refitted; carriage built by E. Long Mfg. Co., Orillia.
 - 1 Steam Feed, 10 inch dia., 36 ft. long, vertical valves; never been used since being installed.
 - 2 Pneumatic Air Bumpers, 16 x 24; never been used.
 - Track and Flat (new).
 - 1 Steam Nigger, Waterous Co.
 - 1 Steam Loader, Waterous Co.
 - 1 Steam Kicker, with shaft and arms.
 - 1 right hand Champion Edger (Waterous Co.), 48 inches, 3 stationary saws, 2 movable saws.
 - 1 left hand Hamilton Edger, 54 inch, 4 stationary saws, 1 movable saw.
 - 1 Engine, 14 x 20 slide valve, Payette fly-wheel, 5 ft. diameter, 30 in. face.
 - 1 Engine, 11 x 18, slide valve, Inglis & Hunter fly-wheel, 6 ft. diameter, 16 in. face.
 - 1 Patterson & Berryman Water Heater.
 - Gordon Hollow Blast Grates, installed under 6 boilers, with blower located in mill; blue prints and instructions on hand.
 - 1 Geared Friction Log Haul, and chain about 300 feet.
 - 1 Ewart's Detachable Chain.
 - Special Heavy Forged Chain, about 800 feet.
- We have also on hand Live Rolls Drives, Pulley, Gears, Shafting, in addition to Filing Equipment, etc.

PARRY SOUND, ONTARIO

Review of Current Trade Conditions

Ontario

There is not much change in the general market features from those recorded in the last issue. July is generally a quiet time in the lumber line, so far as sales are concerned, as most business has been placed for some months ahead and deliveries made. There is still some buying going on and record figures are recorded to have been paid for white pine. Cuts of many mills which had not been contracted for up to the first of July have now been sold and there has been no tendency towards weakness in the matter of prices. In fact it is remarkable how quotations keep up in certain lines considering the somewhat limited demand. The hardwood market is brisk at the present time and there are steady requisitions from United States points.

The labor situation is improved somewhat and it is expected that operations in all plants will be carried on under normal conditions until the middle of August. Perhaps there may be some movement towards the west, but this is not expected to be as large as in previous years owing to the increase in passenger rates. At some points labor is very plentiful and the season's cutting is going on satisfactorily. In the northern streams water is low and the drives somewhat backward.

The transportation situation is very good at the present time. All large shippers are being urged to get in as great an amount of supplies as possible and to send out all consignments that they can during the next two months, as after that period a large number of box cars, now available, will be required for carrying grain from the Canadian west. It is pointed out that shippers can greatly facilitate matters by having all possible hauling attended to during July and August.

Retail lumber yards generally report that owing to better business in the building line trade has picked up somewhat and not a few look to a moderately busy fall season. Stocks, in some instances, are getting low and have to be replenished. The demand for B. C. products is fair and all firms report the sale of a few carloads each week, although not in the same volume as some months ago. As the time draws near for men to go to camps, lumbermen are still casting a weather eye about to find out where labor will be available. They do not look forward to the coming season with any great degree of expectancy and it is predicted that the cut this year will be smaller than last season when only between 50 and 60 per cent of the normal amount of logs were taken out; the cost of camp supplies steadily ascends and wages of \$60 to \$70 a month and board are being offered. This does not appear much of an incentive to the average lumberjack who can enter munition plants or engage in shipbuilding and clean up for himself a larger return for his labor.

Everything points to higher prices in all lines of lumber not only by reason of the added cost of camp operations and maintenance, but owing to the increase in freight rates across the border, which is expected will soon be followed by a similar ascension in Canada—and also owing to the general restlessness of the men who are presenting strong ultimatums for increase in wages. Most woodworking factories are fairly busy considering the scarcity of help. The general condition of the lumber trade at the present time may be described as marking time with no outstanding features beyond maintained firmness in prices.

Several important sales of cuts in white pine have been made during the past few days by Ontario mill men to Toronto wholesalers at the highest figure ever known. This indicates the strength of the market. Another feature is that there is not the disposition on the part of the retailers to load up as heavily as in the past, owing to stocks running into so much money. In a few weeks travellers will be out selling the new cut of timber and expect that as stocks are quite low in some instances there will be a good demand for 1918 offerings.

The export trade to the United States has naturally fallen off during the past few days. Owing to the increase in freight rates, which went into effect recently, there was a rush on orders to be delivered to American customers before the augmented carriage charges became operative across the border. It is, however, expected that business will pick up again shortly and assume its normal proportions in the near future. It is estimated that the increased freight rate of twenty-five per cent, with a maximum of five cents per hundred pounds, will average on lumber imported from the south into Ontario from a dollar and a half to two dollars per M feet.

One leading manufacturer this week remarked there was not

much incentive, even if the men were available, to get out an increased quantity of logs during the coming winter, as operating expenses were so high and advancing so rapidly all the time that the margin of profit was not sufficient to induce extended cutting. He prophesied that prices, high as they are at present, will go still higher this fall.

United States

"There is very little stability in prices, and on inquiring from a half dozen people you would seldom find any two agreed on the same prices," says the Boston correspondent of the "Canada Lumberman."

"Business is very streaked still. Anything that pertains to the war necessities is very active, but the local trade in the various towns in New England and New York State is very quiet. There, however, seems to be enough of the large business for the government or for people working for the government to keep business pretty active."

"Cars have been more plentiful during the last few weeks and a great deal of lumber has been shipped, some dealers finding themselves flooded with lumber that they have been trying to get for months. This has tended to make a little weaker feeling in the Spruce market, particularly from Maine and New Brunswick. We do not think this will last, but we believe as long as the war lasts things will continue to rise in value. To put it in another way, our standard of money decreases in value."

"We are finding a little call for white pine and spruce now to go to South American markets, which we have not had for a long time, but there are comparatively few vessels to take the tonnage. There is still no lumber to speak of going to England or France, and when any goes it is simply as a deckload or small amounts to piece out a steamer load. We do not look for any material changes at present except that we think business will be, if anything, more thoroughly confined to the war markets and along those lines prices will still continue to advance."

There is a good demand for box and crating lumber in all sections so far as hardwoods are concerned, although stocks are rather low. There has been a restriction in embargoes and shippers are rushing lumber through as rapidly as possible. An announcement of interest is that Douglas fir is going to be used for additions to cantonments in the hemlock country. In the East the hemlock that finds its way to the commercial market is almost entirely from Canada or Michigan or Wisconsin; practically all the lumber produced in Pennsylvania continues to be taken by the government. Some hesitation in buying has been caused by the prospective government action in fixing prices to the retailer, but on the whole the demand from sources that cannot wait is sufficient to give the manufacturers all of the business that they can take care of. Also stocks are now unusually broken as a result of the rush to get all the lumber possible moving prior to the increase in the freight rates. Prices are firm.

Reports received from all quarters show that there were 36,000,000,000 feet of lumber cut in the United States during the year 1917, which is 4,000,000,000 less than the previous year. The demand was good but the mills were unable to speed up production from various causes such as shortage of labor, cars, embargoes, etc. Reviewing the current market factors the "American Lumberman" says: In 1917 the car shortage was extremely severe; this year it will be worse. There are the great crops to move; the supplies to carry to the seaboard for over a million soldiers in France; the country faces a fuel famine this winter that will make it impossible to divert cars from coal hauling—and so far only one of the 100,000 freight cars ordered by the Government has been completed. In fact the bulk of the orders for freight car lumber is just being distributed. Elevators are bare of wheat and now the movement has begun. Already a tightening up in the car situation is noted in the wheat raising sections; it will not be long before the car shortage will be a fact. This means that millions of bushels of wheat, of corn, of oats and of other grains will have to be held on the farm. In 1917, with a relatively small yield of wheat, there was not sufficient farm granary storage capacity. This year the supply of bags is short, and it is the patriotic duty of the retail lumbermen of the country to see that granaries are provided for all the wheat, all the corn, for all the grains raised. This means that the retail lumberman should be in a position to fill all orders for granaries. To do this the retail dealer should have on hand a complete stock of lumber; if this lumber is not in the retail shed now is the time to order it. There is still time to get it forward before the car shortage shuts down, but not any time to spare. There is no longer any reason to defer ordering; the

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

government has fixed the mill price for southern pine and Douglas fir, and the retailer cannot hope to gain any concessions by putting off the purchase of lumber. Prices will be fixed on other lumber from time to time. There is no more vital part for anyone to play in the prosecution of the war than to see that none of the grain raised this year is wasted. Therefore, because of patriotism if nothing else, the retailer should place orders now for essential lumber. At present the most absorbing topic in the business world is the scope of the new war tax law that is to be enacted. The sentiment grows that the thing to regulate is not maximum price but maximum war profit, and it may come to pass that this idea will be incorporated in the new law. The crop outlook continues excellent. It is true that some sections no longer report that prospects are the best in years, but, on the whole where any deterioration in condition is noted it is not very great or very extended, taking the country as a whole. Business failures continue on a small plant; retail merchants find it easier to sell in many cases than to obtain goods; the purchasing power of the average worker is steadily increasing, and the measures being taken by the Government assure a more equitable distribution of the supply of labour.

Great Britain

There are still some imports of timber, although in restricted quantities. Most of the stock coming in is on government account, but there are still shipments of imported lumber. The opinion prevails that before long greater facilities may be offered on a larger scale. So many ships are being built in Canada and America that the tonnage is overtaking the loss occasioned through the German U-boat menace, and it is hoped in the near future more space will be available for the transporting of timber. A more optimistic view exists and, if the present rate of progress in ship building is continued more timber may be allowed to come in and some of the present restrictions be removed.

Speaking of prospective American competition the "Timber Trades Journal" says: Many competent authorities here are of opinion that although an enormous amount of tonnage is now being built in the United States, few Americans will, after the war, venture their capital in overseas shipping, and will as heretofore confine their energies to land industries. If this opinion is correct, most of the ves-

sels will have to be sold to foreign, presumably Allied, buyers; but meanwhile big preparations are being made by some of the American shipping companies to extend their ocean-carrying trade, chiefly with South America and the West Indies. Plans are also said to be developing for new steamship lines to Europe, chiefly Scandinavia, the United Kingdom, France, Spain and Italy. Enterprise is also expected on the Pacific, and a company has been formed at New York for the inauguration of a service with India, the Red Sea, and East African ports, largely for the export of unbleached cottons.

While the present restrictions last there is likelihood of no change in regard to imported hardwood, the prices for which remain firm. There is every tendency for values to raise owing to depleted supplies. The demand is somewhat lax owing to labor problems. In home-grown woods trade is active, but manual labor is very short and the calling out of more men for war purposes is likely to have a restricting effect. In spite of all the difficulties it is believed that home-grown timber will have a fair measure of prosperity. A Cabinet Committee is dealing with the important question of afforestation. A year ago a report of the Forestry Sub-committee of the Reconstruction Committee recommended the establishment of a central forestry authority, with adequate funds for the working out of a programme extending over 80 years. Nothing has been done, despite the fact that the country is being rapidly denuded of its timber; and it is rumored that the stumbling block has been the Scottish Board of Agriculture, which objects to a central authority.

The salient feature of the London Dock statistics of goods on 1st June is the extraordinarily small quantity of European deals and battens. For a long time the deliveries from the docks have been far in excess of the arrivals, and consequently each month we find the stock diminishing, especially in the larger sizes of wood for which the enquiry is most persistent. The shortage in the White Sea imports and the difficulty in procuring the Upper Gulf Swedish deals has brought about a severe shortage of 9in. and 11in., which dimensions now bid fair to disappear altogether from the London market in the near future. The very small quantities of wood specified as not taken into stock, but in course of piling, are further evidence of the dearth of imports during the past few weeks; indeed, no wood at all appears under this heading except some spruce and a little Oregon pine.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Conditions Remain Practically Unchanged

The Ottawa lumber market during the opening period of July showed little general change as compared with the closing conditions prevailing in late June. Orders and inquiries in the main remained quiet. Despite the slow demand the market did not weaken, and prices remained unchanged.

The big volume of heavy summer business, of which the spring and late winter months gave promise of, is not in evidence as yet. Wholesalers began to buy more freely but manufacturing prices for this season's sawing did not reach lower levels. The log supply remained just about where it was a month ago, and while the mills have enough to enough to operate on for the present they are virtually living from hand to mouth and depending that there will be sufficient water and help on the drives to get the logs down.

Transportation remained good and embargoes did not appear to cause as much trouble as formerly. Taken altogether symptoms of a more promising market were not altogether discouraging. The change, if there was any, tended toward a stronger and steadier market. The labor situation, both with the factories and the mills, was only fair. With the approach of the western harvest it is expected by several of the mills that some of their help will leave them and go West. The extent of the expected movement from the mills to the fields cannot with any accuracy be gauged at the present time. The application of the fifteen per cent. increase in passenger rates may have some tendency to keep the men from migrating.

Different views continued to be expressed by the trade as to the amount of business being done. Some reported orders and inquiries keeping up and business being satisfactory. Others reported their stocks moving slow and orders scarce. Sales of a million and half a million feet were reported during early July.

Another event which tends to make the outlook more hopeful, and at the same time may cause an advance in price of shell box stock was the letting of contracts for 900,000 boxes by the Imperial Munitions Board, early in July. The new contracts are for a new kind of boxes or the five round box for the eighteen pounder shells. In

addition the boxes have to be stained inside and out, with the object apparently of rendering them less noticeable from the ground to aeroplane observation.

Four of the contracts, of which three came to factories in Ottawa City, and the other in the district, aggregated 520,000 boxes, taking care of half of the total amount of the contract. The average price is reported to have been around eighty cents per box. In some of the tenders it was heard an allowance as low as one cent per box for staining was made while in other tenders this charge went as high as four cents per box.

The completion of these contracts will necessitate about four million feet of lumber, and will open up another selling avenue to the wholesalers. The stock required was selling around \$43 per M. With the issuance of the latest contracts about two million boxes have been contracted for by the Imperial Munitions Board within the last month.

Business in retail stocks showed a little improvement over June. Lath and shingle remained slow. Sash and door remained stationary or slightly improved. James Davidson's Sons received an order for a carload of doors for South Africa. It is the first of its kind this plant has received since the war began. Delivery is to be made via St. John.

Practically all of the woodworking plants and factories were busily engaged turning out their shell box contracts. The successful tendering of Ottawa firms on the last two issues of boxes has given the plants plenty of work ahead for several weeks, with the result that shell box labor at the present time in Ottawa is scarce. As an example of the scarcity James Davidson's Sons are contemplating employing girls and women for shell box work in their factory.

Some months ago W. C. Edwards Company employed female labor, but it was used in the shook factory. At the Davidson sawmill at Fort Coulonge trouble is also being experienced with labor, twenty of the men having recently left. The sawmill cut is proceeding very well and is over half completed. It will likely end August 15th. About one hundred thousand feet per day is being cut. The season's output will be in the neighborhood of six million feet.

Avoid Milk Waste in the Cook House

Use Klim wherever milk is required in soups, sauces, puddings, cake, tea, coffee, etc. It gives excellent results and eliminates all waste. It is the milk solids,—casein, albumen, milk sugar and milk salts of pasteurized separated milk. Nothing is added to increase its bulk or change the natural milk taste. Nothing is removed from the original separated milk except the water.

Klim is Genuine—the Flavor Proves It

Use from the tin as needed, replace cover, and remainder will keep sweet and fresh until next required. KLIM never sours or spoils even during the hottest weather.

KLIM bulks small, weighs little, is very convenient and economical to ship—saves 70 per cent. in freight charges. Packed in ten pound tins, (makes 40 quarts) six tins to a case. Order with your other food supplies.

The British Paper Markets are Your Opportunity

Establish a market for your paper stock now and it will be a great asset to you in after war trade with Great Britain. We can make very advantageous contracts for Canadian paper of all kinds and especially newspaper stock. This is a big opportunity for Canadian mill men. We are the largest paper makers' agents in Great Britain and will be glad to hear from manufacturers interested in export trade.

Write us to-day.

MONTREAL

CANADA

Montreal Business Inclined to Mark Time

Business in Montreal shows an inclination to drop. In spots there is a fair amount of activity, but taken as a whole, orders are not as numerous as before. The buying for construction purposes is naturally on a low scale, although this is more than counterbalanced by the demand for box lumber consequent on the contracts for shell boxes recently given out. Montreal did exceptionally well in this connection, one order being for 150,000 boxes. Box manufacturers are now better off for orders than for a very long period, the low prices having previously resulted in several firms being out of the running when it came to securing contracts.

Trade with the United States is slower, but prices continue to hold. Wholesalers reiterate the opinion that conditions are in favor of an advance rather than a decline, especially in view of the firm attitude taken up by manufacturers, who say that there is no chance of their costs being reduced. The outlook is all the other way, having regard to the likelihood of the labor supply being further depleted.

There is no improvement in the local building situation; there are, however, reports of some fairly important projects which will probably materialize during the summer. The high values of materials are against any pronounced revival in construction, and only the most urgent work is being put in hand. Reports from the province indicate that building there is better than in this city. During June the Montreal permits totalled \$287,560, a decrease of \$60,785; while for the half-year the value was \$2,039,565, a falling off of \$427,094.

The local Builders' Exchange has inaugurated a movement for a conference of representatives of builders' exchanges and large contracting interests on the subject of present and after-the-war problems. There are several questions of interest which will be discussed, such as foreign competition contracts, tenders, material, etc., and it is with a view to seeing whether an adjustment to the new conditions can be made that the conference is proposed.

Shipments to the U. K. are still on a small scale, and are for Government account. Some stock is also going to South Africa.

St. John Reports Conditions as Quiet

While some cities and ports report good business through the trade journals, the same cannot be said of St. John, insofar as the long lumber manufacturers are concerned. In many cases, while the reports are good, still sales are not taking place, and purchasers at these cities and ports are few. No overseas business is being transacted here and the outlook is at this moment very unpromising, although no one knows what changes may take place in a week.

Forecasts are wholly out of place as the months come and go. Movements of deals overseas grow less and less until to-day no shipments are taking place. The only foreign business is South African cargoes which are now loading here. These sales took place months ago. From three to four cargoes for South Africa have been shipped during the past two months. There are also some of the same enquiries being put out by these buyers at the present, but whether St. John will be able to bid low enough to get them remains to be seen. The American business insofar as St. John is concerned, has lessened very much during the past two weeks. In many instances this is caused by embargoes placed on the points to which sales have taken place. In fact there are very few places where shipments of lumber will be accepted by railroads. This situation has improved during the past ten days.

Prices are also not as good as ten days ago. The advance of \$1.50 per M in railway freights is causing the wholesalers who purchase mill cuts to desist from further buying until it is decided who will pay the extra freight—the user or producer of the lumber. Possibly all these matters will right themselves and business move along in a better and more solid position than for some time past. It was well known for a long time that the railways must have an advance.

Stocks of lumber at St. John are increasing daily. Only the mills of Randolph & Baker Ltd., Stetson Cutler & Co., and Murray & Gregory Limited are running, sawing mostly three-inch stock. This can be shipped either to American or British points, wherever the outlet and best prices are to be found.

Heavy rains have caused the Log Driving Company much satisfaction and the drive is now about finished with all logs on the main St. John river into the booms. Rafting is being carried along usual. The usual number of men are employed, but in many cases they are green, and need much breaking in. This causes less of a daily turnout, but better men are not to be found. This will therefore cost more per M to raft logs as well as drive them.

Cutting, driving and sawing logs are this year costing very much more than ever before; therefore, unless the manufacturer can get a big increase over 1917 prices he will not have a profitable year.

The Government Prices on Yellow Pine

The prices approved by President Wilson on yellow pine and fir lumber have gone into effect. According to advices received by the Frank H. Harris Lumber Company, Toronto, who specialize in southern products, the price fixing committee has set forth the procedure that each manufacturer shall:—

(1) Make contracts and accept orders for his product at prices not in excess of the applicable maximum prices, always subject to an option at the applicable maximum prices in favor of the United States or the nominee of the War Industries Board. Under this option, which will cover all Southern or yellow pine lumber down to time of actual delivery to the purchaser, the War Industries Board to any extent required will allocate either to the government or to other essential users. Any balance not so allocated will be released for sale to commercial buyers, but at prices no greater than those determined upon as above set forth.

(2) Comply with the directions of the War Industries Board, as issued from time to time, with reference to filling commercial requirements in the order of their public importance and to furnishing such information and making such reports as may be required.

(3) Keep up to the best of his ability the production of Southern or yellow pine lumber so as to insure an adequate supply so long as the war lasts.

(4) Neither reduce the scale of wages now being paid nor change fundamental labor conditions now in force.

The government will apportion the car supply available for lumber and arrange for its transportation, subject to allocation by the War Industries Board as aforesaid, to the end that injury to the industry due to abnormal war-time conditions be neutralized so far as may be.

Foreign trade, except to the governments of nations associated with us in the present war, is not to be affected by this ruling. Government yellow pine or Southern pine maximum prices effective midnight, June 14th, to and including September 14th, 1918, covering states of Missouri, Arkansas, Texas, Oklahoma, Louisiana, Mississippi, Tennessee, Georgia, Florida and Alabama.

YOUR opportunity in Wood Pulp

Every Canadian Saw Mill or Plant could profitably take advantage of this opportunity. By installing an inexpensive Kraft Soda Mill, all the slabs, tops, bottoms and waste wood may be utilized to produce Wood Pulp. We can place long term contracts for all that Canadian concerns are able to supply. The Swedish supply is practically cut off and Canada has a free field for this business. We will be pleased to send you details of this opportunity.

Ontario

J. S. Gillies, of Gillies Bros., Ltd., Braeside, has been elected a director of the Southern Canada Power Company, Limited.

The stables in connection with the lumber mills of P. Ament, Brussels, Ont., were recently destroyed, incurring a loss of about \$3,000, which was partly covered by insurance.

The saw and grist mill owned by Ross Staples, of Indian River, Ont., was recently destroyed by fire, the origin of which is unknown. It was one of the landmarks of the place, being a stone structure erected in 1861 by Mr. Borland.

Kent Ockley, Limited, has been incorporated, with head office at Toronto, Ont., and capital stock of \$40,000, to carry on business as lumber manufacturers, etc. The provisional directors of the company are A. W. Briggs, E. M. Dillon and R. T. Birks, all of the city of Toronto.

A new industry is being started at Niagara Falls, Ont., by Lundy-Scott, Limited, who are now manufacturing collapsible fruit baskets, berry crates and egg crates, with new patent fillers. As a result of sending samples to England, Lundy-Scott, Limited, received an order for two million baskets.

At the recent fire which wiped out the Grimsby Park Inn at Grimsby Beach, Ont., many of the cottagers had a close call. Among those whose summer home was nearly wiped out was A. E. Clark, chairman of the Wholesale Lumber Dealers' Association, Toronto. Mr. Clark's cottage is located two doors east of the hotel and it required almost superhuman effort to save it from destruction.

The time office of the Collingwood Shipbuilding Company, at Collingwood, was recently destroyed by fire. It was built about 1900 and then occupied a site on the west side of No. 1 dry dock. A few years later, owing to changes in the layout of the yard, including the erection of a new pumping station and the construction of No. 2 dry dock, this building was moved to its present site.

The Porcupine River Improvement Company has been incorporated, with head office at Hoyle, Ont., and capital stock of \$1,000, to acquire, construct and maintain dams, slides, piers, booms or other works necessary to facilitate the transmission of timber down the Porcupine River and the tributaries thereof. The provisional directors of the company are E. E. Mansfield, F. Chormann and W. S. Morlock.

Guelph, which in every other respect is a progressive community, is tackling its acute housing problem along the line of removing the obstacles to ownership. Under the Housing Act it is proposed to build in Guelph a considerable number of houses for workingmen, which may be acquired on payment of \$100 down and monthly instalments, in lieu of rent, for ten years, ranging from \$15 in the case of houses worth \$2,000, to \$20 for houses worth \$2,500.

A charter has been granted to the Vineland Wood and Lumber Company, Limited, with headquarters at Vineland, Ont. The company is empowered to purchase timber lands, to manufacture lumber and to buy and sell timber, lumber and cordwood for fuel or other purposes. The incorporators are E. H. Moyer, Frank Sumner, Roy Honsberger, Harvey Honsberger and J. S. Mason, of Louth township, and R. J. Moyer and Fred C. Carr, of Clinton township.

The water power sawmill and box factory of the Collins Inlet Lumber Company, at Collins Inlet, Ont., was recently destroyed by fire. The mill was a historic one, having been built in 1859, at Beaverstone. It was then known as Waddell's mill, and in 1882 was removed to Collins Inlet, which is about mid way between French River and Killarney. John Bertram was the president of the Collins Inlet Lumber Company until 1904, the company having purchased the mill from the Midland and North Shore Lumber Company. On the death of Mr. Bertram he was succeeded by the present head of the company, Melville Bertram. The manager of the mill is C. W. Pitt. In the year 1904 a box factory was established with a large business in making boxes for the fish and canning concerns. The capacity of the plant was about 50,000 to 60,000 feet of white and red pine per day, the mill being equipped with two circulars and a gang saw. The company own valuable limits in the vicinity and the mill had been busy since the opening of the season, cutting, the output having just been sold. It is understood that the loss is practically covered by insurance.

Eastern Canada

The Marine Construction Co., Ltd., care of the president, Mr. D. H. Saker, Strait Shore Road, St. John, N.B., have started construction on a wooden vessel of about 1,000 tons.

J. H. A. Acer & Co., Ltd., has been incorporated, with head office at Montreal, P.Q., and capital stock of \$100,000, to carry on business as importers, exporters, and to buy, sell and deal in pulp, paper, cardboard and wood products of all kinds.

Jos. Villeneuve Limitee, has been incorporated, with head office at St. Romuald, P.Q., and capital stock of \$40,000, to carry on business as manufacturers and producers of lumber, logs, timber, doors, window sash; to operate lumber mills, workshops, saw and shingle mills, etc. Among those interested are Jos. Villeneuve, J. Deblois, O. Couture and G. Trudel.

The contract for building the large shipyards at Halifax has been awarded by "Halifax Shipyards, Limited," to the Bedford Construction Company (formerly Cavicchi & Pegano), incorporated in Nova Scotia, it was announced recently by officials of the company, who predicted that the first of the three shipbuilding berths will be completed within four months' time.

About ten cars of pulpwood are being shipped from Chatham and vicinity each day by the Miramichi Lumber Company, under an arrangement made with the government. According to this arrangement the government is getting the first call on the pulpwood. Anything above the ten cars per day goes to fill orders of private parties, as fast as the necessary steps can be made.

The Canadian Pulp & Paper Association has contributed \$1,393 to the "Gazette," Montreal, tobacco fund, this being the amount collected at the an-

nual meeting. In accordance with the request of Mr. F. J. Campbell, the president of the association, two-thirds of the money has been allocated for tobacco for the forestry battalions in France, and one-third for general distribution in France.

The North Shore lumbermen of New Brunswick recently had an interview with the provincial government, in which they presented their views on the suggested redistribution of Crown timber lands. Among those in the deputation were F. D. Swim, of Doaktown, who has succeeded D. J. Buckley as president of the North Shore Lumbermen's Protective Association. The latter is now a member of the Forestry Advisory Board. W. J. Maloney has succeeded Mr. Swim as vice-president of the association, while W. S. Loggie, M.P., Wm. Anderson, and W. G. Thurber are other members of the Executive.

That part of the Quebec and Saguenay Railway between Quebec and Bay St. Paul will be ready for operation this week, according to advices received in Ottawa. The line may be finished to Murray Bay by the fall. It is now owned by the government and will serve as a feeder for the Quebec end of the Canadian Northern system, with which it is directly connected. After much negotiation the final sale by the Forget interests to the government has been arranged and at the recent session \$3,490,000 was appropriated for the purpose. It will be paid when the titles are delivered and other formalities completed.

According to W. B. Snowball, of Chatham, N.B., the lumber cut on the Miramichi will only be about half this year what it was last year. While the cut on the Southwest Miramichi last year was between eighty and one hundred million feet, it will not run over forty-one million feet this year. On the Northwest Miramichi only about half of the amount of lumber of last year was got out. This is, in a large measure, due to the scarcity of men, and the different lumber operators are badly in want of men at the present time. A large amount of the lumber is piled up at the mills, on the wharves and in other places on the North Shore, and has not been moved, owing to transportation and other conditions.

Western Canada

R. S. Walker, Grande Prairie, Alta., is contemplating the erection of a planing mill.

The G. T. P. tug Lorne recently arrived in Vancouver with a record log tow of 1,600,000 feet.

Fire lately did considerable damage to the boiler rooms of the Hanbury Company's mills on False Creek, but the necessary repairs were soon completed.

The Brunette Sawmill Company, Limited, New Westminster, B.C., have decided to rebuild at once their sawmills which were recently destroyed by fire.

No. 4 camp of the International Lumber Company at Campbell River was burned out by a forest fire and five logging engines were abandoned by their crews when they were driven out.

Damage to the amount of \$75,000 was done recently by a fire at the Eburne Sawmills, owned by Messrs. P. D. Roe and Robert Abernethy. The mill, which employed more than 100 men, was completely destroyed.

Plans have been drawn for the erection of a sawmill at Point Grey, B.C., by the B. C. Box Company, Limited. The company has secured a site on the banks of the Fraser River between Point Grey and South Vancouver.

Bandits set fire to the Farmers' Trading Company grain elevator, causing a loss of 3,000 bushels of grain and a million feet of lumber; gagged the manager, Charles Hill, and relieved him of \$1,500, at Craik, Sask., recently.

The plant of the Apex Company, on the Pacific Highway, south of Cloverdale, B.C., was destroyed by fire recently. The loss was about \$10,000, and only partially covered by insurance. The main stock of lumber was saved.

The Leitch McClean Lumber Company, Limited, sold their plants at Elrose and Greenan, Sask., and at Benton, Alta., to the Monarch Lumber Company, Limited. They also sold their plant at Sibald, Alta., to the Rogers Lumber Co.

Robert F. Pay, a well-known business man, founder of the Moose Mountain Lumber & Hardware Company, and Director of the National Paving Company, died recently in Winnipeg from pneumonia. He was born at Paisley, Bruce County, Ontario.

Sealed tenders will be received by the Minister of Lands for B. C., until the 7th day of August, 1918, for the purchase of License X1379, to cut 3,810,000 feet of hemlock, fir, cedar and spruce on an area situated on L. 29, Beaver Creek, Loughborough Inlet, Range 1, Coast District.

The Cut-to-Fit Buildings Company, Limited, has been incorporated, with head office at Vancouver, B.C., and capital stock of \$100,000, to carry on business as loggers, lumber and shingle manufacturers, operators of sawmills, planing mills, shingle mills, etc.

Steam and operating engineers to the number of over one thousand recently went on strike in British Columbia, demanding shorter hours and increased pay. It is understood that most of the mills have met the demands of the men and agreed to the new scale.

In a recent fire at Craik, Sask., the lumber yards and elevator of the Farmers' Elevator Company were destroyed. The loss on the elevator was about \$13,000, and on the lumber yard about \$30,000, with a loss in cheques and currency of about \$1,300.

The Spruce Products Company, Limited, has been incorporated, with head office at Vancouver, B.C., and capital stock of \$1,000, to carry on business as manufacturers of and dealers in lumber and shingles, shingle mill and sawmill owners, loggers, lumber and shingle merchants, etc.

Sealed tenders are being received by the Minister of Lands for B. C., until the 7th day of August, 1918, for the purchase of License X1350, to cut 2,000,000 feet of fir, spruce, and cedar situated in log-jam mouth of Klamath River, Rupert district. One year will be allowed for the removal of the timber.

The Miami Corporation, Port Haney, B.C., and Delaware, U.S., are contemplating the erection of a lumber mill at Port Haney, B.C., on the Fraser River, at the southern end of the proposed railway. The local representatives are Abernethy & Loughheed, Port Haney, B.C. The capacity will be 400,000 feet per day.

Export Manufacturers, Limited, has been incorporated, with head office at New Westminster, B.C., and capital stock of \$20,000, to manufacture, treat, make merchantable, transport and trade in lumber of every description; to carry on the business of box makers, woodworkers, timber merchants, lumbermen, loggers, sawmill, shingle mill and pulp mill proprietors.

"By-Pass" Blower Systems

for green saw dust and wet stringy material

Material that usually clogs the ordinary Blower is handled easily and continuously by our "By-Pass" Blowers. No material passes through or around the fan. That is the big secret of "By-Pass" success. Slow speed and minimum power are other strong features. Write for literature and all details.

We manufacture and install complete systems

PHEW! Don't Suffer That Disagreeable Smell

GET ROSEALENE AT ONCE

ROSEALENE WILL INSTANTLY KILL ALL ODORS and will keep generating odors suppressed for a period 10 to 20 times longer than any known disinfectant.

Antiseptic, Insecticide and Germicide. Exterminates all vermin, including Bed Bugs and Ants.

ROSEALENE is itself odorless. It is cheap in price, harmless, non-poisonous and an excellent antiseptic for cuts and wounds. ROSEALENE is used in Hospitals, Dairies, Theatres, Abattoirs, Restaurants, Stables, Kennels, Sewers and every place where odors occur.

Band Saw

"The
Invariable
Choice of The
Man Who Knows"

HOW MUCH DO YOU SALVAGE FROM YOUR KERF PILE?

¶ This is a question to be answered by the individual millman. If he cannot give a favorable answer, then he owes it to himself to investigate. The "341" is a leader in its class due to its superior construction and ability to take an overload and stand up under it. The feature most prominent on the "341" is its Straining Device. This combined with the thin gauge saw used is a sure means of reducing kerf. With this machine you can reduce that kerf pile to a minimum. The "341" shown above is installed in an institution where efficiency must reign. You are welcome to any information we have on the "341." Simply ask for it on a post card. It will be sent free and without any obligation on your part.

"Suggestions for the Lumberman"

The above is the title of a booklet which we are trying to put into the hands of every Lumberman and Mill Owner in Canada. The suggestions contained therein are live, practical and of proven worth. There is something of value in this booklet for every Lumberman, no matter what the size of his camp, large or small.

The Mill Man also will find his time well spent by a perusal of this Booklet, as there are suggestions therein by means of which he can reduce his operating expenses and increase his profits.

WE WANT YOU TO HAVE A COPY

If you have not received yours yet, drop us a card. We will gladly place this Booklet also in the hands of each one of your foremen if you wish. Just say how many copies you want, if you prefer to distribute them yourself, or send us their names, and we will mail them direct.

Marsh Engineering Works, Limited Established 1846 **Belleville, Ontario**

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.

When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

**—the unproductive
scrap heap**

Is your mill up-to-date or are you still content to allow that pile of sawdust, shavings, ends, slabs, etc., to prove a burden instead of big source of income. With the big prices which prevail for wood pulp and those chemicals distilled from waste wood it will pay you to consider installing the necessary plant to make the scrap heap productive—and then write us! We have specialized in chemical-producing plant for over 75 years and have installations in all parts of the world.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of
Chapman Double Ball Bearings

—IN—

**Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.**

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

**You pay for Chapman bearings

OWEN SOUND, ONTARIO, CANADA

DUNLOP "Gibraltar RedSpecial"

POWER—SPEED—SERVICE

NOTHING short of remarkable was the advent of this master Dunlop Belt "Gibraltar RedSpecial." Its coming undoubtedly solved that momentous problem which had for years baffled belt users, namely, the economical transmission of power, combined with an unusual length of service.

Dunlop Workmanship An Important Factor

"Gibraltar RedSpecial" superiority lies not alone in the supreme quality of the materials embodied in it. Dunlop Workmanship, the character of which is unsurpassed, has also contributed its quota. This accounts for its great tenacity, its enduring flexibility and its absolute uniformity throughout.

Held In High Favour

Resistance to destructive elements, and the unusual capacity to continually deliver the maximum of power with the minimum of up-keep expense, are characteristics of "Gibraltar RedSpecial" which have placed this belt on the pinnacle of popular favour.

Where This Belt Excels

"Gibraltar RedSpecial" is particularly adapted to Saw, Lumber, Pulp or Paper Mills, Bleacheries, Mines, Cement Plants, Brick Yards, Oil Wells, Threshers and Stone Crushers. It is built especially to withstand the jerky strains consequent on the fluctuation of power under any load; is immune to the deteriorating effects of an over-abundance of moisture, or, as in the case of Pulp and Paper Mills and Bleacheries, injurious vapour fumes. Maximum adhesion over small pulleys on high-speed machines is another reason why this belt predominates.

The Dunlop Guarantee

If you have a difficult drive anywhere in your factory drop a line to our Head Office, or to our nearest branch, and we will send a man experienced in belt engineering to consider your requirements. If it is an instance where the "Gibraltar" Belting may be suitably employed we will recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm producing rubber products.

"The Original Red Rubber Belt."

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, break-downs or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims. Address

The Babbitt Metal that's at the Front in Efficiency and Economy

HARRIS HEAVY PRESSURE

THE ARISTOCRAT OF BABBITT METALSSHIVES LUMBER CO., LTD., Campbellton, N.B.,
CanadaMessrs. The Canada Metal Co., Ltd.,
Toronto.

Dear Sirs:

Replying to your inquiry regarding our experience with Harris Heavy Pressure Metal, would say we have been using this metal for about five years in main bearings and cranks of Wickes' gangs and steam engines, also edgers, etc., in place of more expensive metals that we formerly used for these bearings.

We are pleased to be able to say that the Harris Heavy Pressure has in every case given us good satisfaction, being a nice metal to pour without shrinking or cracking, and wearing well. So long as this metal retains its present standard of excellence we will have no hesitation in using it for the most severe conditions we have for babbitt metal.

Yours
JOHN M. MACLEAN,
Superintendent.

GRATON & KNIGHT

Standardized Series LEATHER BELTING

Tanned by us for belting use

In times like these you have no right to waste
one ounce of power

With all costs shooting skyward, the need of economy is greater every day. Above all, stop power-wastes.

Power Economy is simply a matter of using the right belt for every drive. There is a Graton & Knight Standardized Leather Belt for every transmission requirement, a belt scientifically constructed to transmit the utmost power for the longest period of time.

Write for our Book, "Standardized Leather Belting."
This is sent without cost to all Belting users.

ATKINS

ALWAYS AHEAD!

The most advanced improvements in Saw manufacture have placed us far ahead in the manufacture of Saws for all uses.

Our Band and Circular Saws are worthy examples. They cut more timber—do it with less power and require less repair to be kept in perfect condition.

Economy in mill operation has proved their value. Put them through competitive tests with other Saws.

The Sterling quality of

Atkins Sterling Steel Saws

will overcome your difficulties.

Gentlemen:-

Replying to your letter of the 29th inst., re reports
we are pleased to say that we find same most satisfactory
and more than once they have been the direct means of our
obtaining certain business.
We have a great many dealers throughout the country
and we forward on your reports to our dealers covering their
respective towns, and where we have no instance that the dealers
actually secured business through them, we do know that they
appreciate this service from us very much.

Yours truly,

CHW/100.

MACLEAVE & CO. LTD.

Double Deck Steam Kicker

The E. Long Manufacturing Co., Ltd.

ORILLIA :: :: ONTARIO

The Stuart Machinery Co., Ltd., Winnipeg
Williams and Wilson, Limited, Montreal
Robt. Hamilton & Co., Vancouver
Gorman, Clancey & Grindley, Ltd., Calgary
and Edmonton

The illustration shows our STANDARD DOUBLE STEAM LOG KICKER which we manufacture with cylinders 8 in., 10 in. and 12 in. bore. This kicker is made for either single or double deck mills. The bottom head of the cylinder is cast solid, eliminating the necessity of taking the machine apart for packing. The joint between the valve case and cylinder is a "ground joint," which is perfectly steam tight and requires no packing.

ORILLIA, CANADA.

The New Model Bandmill

Upwards of 125 in operation

The Band Mill illustrated on this page is the famous "Waterous New Model" designed and built in Brantford by the Waterous Engine Works, Limited,

Some very interesting improvements and features may be noticed when comparing the text with the photograph (taken from an eight foot double cutter, this size will carry a 14" blade.) The mandrel bearings have been increased in diameter and length. The columns were redesigned to hold the bearing supporting posts above and below the mandrel, and were extended back to give a much larger bearing on the mill bed. This construction holds both wheels steady and rigid, at the same time positively eliminating the slightest vibration even while engaged on the heaviest work. While the straining device has been replaced by one which has met with general approval from coast to coast. Fulcrum points are knife edged. Sudden shocks and jars which might effect the saw are absorbed by tension weights carried on cushioning springs. Incorporated in the "New Model" is the Waterous saw guide. This feature makes double cutting on a rigid mill possible.

TWELVE FEATURES OF INTEREST TO YOU:

The base extends completely around the mill.
The upper wheel is supported above and below mandrel.
Top wheel has extra wide range of adjustment.
The tensioning device is double knife-edged.
The upper wheel is mechanically tilted from front or rear.
Both guides are saw-centre swing, single or double cutting.
Upper guide is absolutely rigid, non-breakable, water cooled.
Operating mechanism is direct, rapid and power driven.
No belts to gum or slip. All mechanism is enclosed within column.
Lower guide is extra high and opens instantaneously.
Every part is accessible.

If you are interested and would like to hear more about the "New Model" Band Mill, write for our Bulletin No. 1022. This will give you details and Illustrations. Our Service Department willingly assists in any direction.

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 90c per lb.; West of Fort William, \$1.00, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00
worth of mixed metal
sold annually.

“Caught with the Goods”

WHEN it comes to lumber, it is better to be “caught with the goods” than without them. Our connections with some of the largest mills in Canada enable us to keep well stocked at all times in all grades of lumber, and to guarantee entire satisfaction in quality and delivery. Our stock is never depleted or limited, which means service to the buyer. In lumber we are “there with the goods”

“S. O. S.”

That means our STOCK OF SPRUCE. We can offer you the following for immediate delivery in 1917 cut spruce :—

2"	x 5	8' up 40%	16' Spruce Merch.
2"	" x 6	" " " "	" "
2"	" x 7	" " " "	" "
2"	" x 8	" " " "	" "
2"	" x 9	" " " "	" "

All lengths and widths, piled separately :

3 x 7 x 8/16 Merch. Spruce	
3 x 8	" "
3 x 9	" "
3 x 10	" "
3 x 11	" "
3 x 12	" "

175,000 Feet Spruce and White Pine
Lumber

At present we are getting excellent Railway service and can ship promptly orders for Canadian and United States points. We are advised, however, by the Canadian War Board to make the most of present facilities as they are certain to be greatly curtailed if not withdrawn after September first, in order that equipment may be available to move the grain crop. We therefore urge our customers to anticipate their requirements for the Fall and Winter and order the stock now so that we may ship it while cars are available.

SAW MILL MACHINERY

Firstbrook Bros. Limited

Having decided to discontinue saw mill operations at Penetang have the following machinery for sale. This machinery is all in operating condition and is open for inspection at Penetang, Ont.

Mill Machinery

Extra heavy log haul-up works with inch round and flat chain, 128 ft. centres.

2—Watrous log unloaders or kickers, 3 arms, 10 in. cylinders.

1—Watrous log loader, 3 arms, 10-in. cylinders.

1—Watrous right-hand double cutting band mill, 11 in. saws, 8 ft. wheel, with 3-block carriage; 24 in. opening; Payette set works and dogs; 8 in. x 38 ft. steam feed.

1—Watrous double edger for 20-inch saws, lever shifter.

1—Payette double edger for 18-in. saws, lever shifter.

48—live rolls about 8 ft. long by 10 in. dia.; extra heavy, sprocket drive.

20—High cars with roller tops, 24 in. heavy wheels on 3 in. axles, standard gauge.

1—Mershon 4 saw gang resaw, takes squared cants or just one face, ideal machine to cut small logs and centres of large after good has been taken off.

1—Payette picket machine, made specially for shade roller stock, will feed pieces 16 in. long, also sorting table with chain top.

1—Rogers Iron Works circular resaw for making box lumber from slabs; fool-proof machine.

1—Payette edger for box and short stock.

1—Rogers twin circular or tie maker.

1—Payette lath bolter and lath machine.

1—Pair lath trimmers.

1—Picket trimmer (bunch trim).

Conveyor drives and chains.

Pulleys, gears, heavy line shafting and countershafting with bearings.

Send us your requirements.

We have a large stock of double and triple leather belting in widths from 10 in. to 46 in.

Power House Equipment

2—Return Tubular Boilers, Polson make, 60 x 16 ft., Dutch oven settings.

1—Return Tubular Boiler, Goldie & McCulloch make, 54 x 16 ft.

Breeching and smoke stack for above boilers, 50 in. dia., newly painted, 800 ft. new ½-in. guy and plate for brick pier.

1—Northey boiler feed pump, outside packed, 8 in. x 5 in. x 12 in., for 3 in. suction pipe.

1—Pair Polson "Brown" type engines, coupled on quarters, 22 in. x 50 in., with 16 ft. x 48 in. belt, balance wheel. Excellent engines.

1—Pair American feed water heaters for above engines; 10 in., copper coils.

Filing Equipment

1—Watrous band saw grinder for 6 in. saws.

1—Baldwin retoothing for band saws.

1—Wm. Hamilton band saw shear, 12".

2—Reversible saw levelling blocks.

2—Chilled band saw anvils.

Hanchet band saw swages; Crescent circular saw swages; shapers and dressers.

Yard Equipment

About 15 tons each 45 and 56 lb. rail. Booms and boom chains, ½, ¾ & 1. Winches and other mill supplies.

Small shunting locomotive.

Prompt shipments and bargains for quick sale. Will send all particulars and prices on application.

Firstbrook Bros.
Limited

Penetang or Toronto, Ont.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of Chapman Double Ball Bearings

—IN—

Shafting, Hangers, Pillow Blocks Loose Pulleys, etc.

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

**You pay for Chapman bearings
whether you buy them or not**

Timber Lands

License or permission to cut timber on public lands in this Province is acquired at public auction, after due notice has been given, subject to a yearly ground rent of \$5 per square mile, and is renewable annually, provided the licensee shall have complied with the regulations.

The timber cut in virtue of such license is subject to a tariff of dues fixed by order in council.

Licensees are forbidden to cut on Crown lands trees less than a fixed diameter.

The Regulations also provide that all timber cut on Crown lands must be manufactured in Canada.

In the event of a licensee wishing to transfer his rights, he is at liberty to do so under certain conditions, namely, the paying of a fee of \$4 per square mile.

There are at present time about 75,000 square miles of forest lands under license and over 150,000 miles in the possession of the Crown.

Water Powers

To obtain authorization for the utilization of a Water-Power in the Province of Quebec, application should be made to the Honourable Minister of Lands and Forests.

Water-Falls capable of developing over 200 H.P. are granted under emphyteutic leases, the conditions of which are upon the following lines:

- 1.—Duration of the lease, from 25 to 99 years, according to the importance of the water-power and to the amount of capital required for its development.
- 2.—Payment of a yearly rental which does not vary during the term of the lease, for the land granted, counting from the date when the contract was signed.
- 3.—An additional yearly charge of from 10 to 35 cents per H.P. developed according to the geographical situation of the site of the water-power; such charge being payable from the time the power is produced.
- 4.—The above charge is subject to revision every 21 years, counting from the signing of the contract.
- 5.—Delay of 2 years for beginning works and 2 further years for producing power.
- 6.—The lessee to make a deposit in money or in securities as a guarantee of good faith for the carrying out of the contract. Such deposit may be forfeited if the conditions are not fulfilled; but in the contrary case it may be refunded after a certain time.
- 7.—Lastly, the grantee must submit plans of his works, mills, etc., to the Department previous to their installation, and, when such installation is completed, he must keep the Department informed as to the quantity of power produced.

DAWSON'S

"Lincona"

Balata Belting

**Improves
with Age**

Write us for detailed
information and prices

Can be exposed to the weather and will run in water without injury.

Rain or snow make no impression on "Lincona"—that is why it is the mainstay of the lumber trade.

In the making of "Lincona" Belting, the Balata fluid is allowed ample time to permeate and become an integral part of the fibre. The exceptionally fine quality of gum used, allows greater compression. The result is a thin belting with a stronger wearing surface.

"Lincona" Balata works without friction. It has reduced belting troubles to a minimum. No more slipping or stretching Belting where "Lincona" is used.

Lumbermen should select "Lincona" Balata Belting for all transmission purposes.

The Shortest Distance

Between Two Points—Is a Straight Line

The Quickest Way to Belting Economy

The Goodhue Belting comes direct from our factory to your machinery. It is specially made from the best hides and is guaranteed to give satisfaction for length of service, and will transmit 100 per cent. of the power generated in your mill.

Goodhue Belting is made only from best Packer Hides, thoroughly stretched, all stretcher ends cut off, and only the stretched portion going into the Belting.

We recommend "EXTRA," "STANDARD" or "ACME," waterproof, each the best in its own way. Once you have used the Goodhue Belts, nothing will tempt you to put on inferior quality.

Send for our prices and information.

A Little Tip About a Good Axe

The same pattern or make of Axe will not satisfy every woodsman—of course. Just the same, there are several essential points that must be looked for if the Axe is to give good service. High grade steel first of all. Hand made production that may be watched closely in the tempering. A finishing that will ensure a good cutting edge that will stay keen. These points are well exemplified in Blenkhorn's Chief—our axe that satisfies the most critical.

"FORKED LEAF" BRAND
OAK FLOORING

The Beauty of Oak Flooring is Unsurpassed

"FORKED LEAF" BRAND
OAK FLOORING

WHETHER it is used in a modest home or spacious ballroom, it is the basis of an attractive interior. A splendid way to modernize and beautify old floors is to lay 3/8" Oak Flooring over them. The cost is small and the effect is to transform an otherwise "ordinary" room into one that is pleasing and easy to keep clean. A polished oak floor, with a few rugs upon it, enriches the appearance of any room.

"Forked Leaf" Brand Oak Flooring

"The Kind That Makes Good"

is made from the best of all the oaks in a thoroughly modern manner. As our material comes from one district, an even color and texture are maintained. It is GUARANTEED to be of superior grade and perfect manufacture. Many a dealer has built up a good flooring business with "Forked Leaf" Brand Oak Flooring.

Combination Link-Belt

For Pulp Wood and Refuse Carriers

"Combination" Link-Belt is well established in the trade as an inexpensive type for conveyors and elevators where the practical requirements are strength and low cost. It is particularly desirable for pulp wood and refuse carriers.

When you buy it from the Link-Belt Company you get—

1. A pin accurately fitted to the side bars. We use a flat portion milled accurately on the end of the pin, fitting into a carefully broached hole in the side bar. Other makers depend upon forged lugs or forged necks under the head to hold the pin in place. These cannot be made accurate enough to prevent a certain amount of looseness. When the pin gets loose, it cuts into the side bar, the pitch elongates, and the links are ready for the scrap pile. Length of life in service is increased by preventing motion between the pin and the steel side bars which hold it.

2. Pins and Side Bars hard, durable and strong. The steel is a hard, tough, durable grade. Pins rolled smooth after forging (as the other types of pins cannot be). The rolling compresses and trues up the original hard scale surface.

3. Cast center links made of best grade of malleable iron for durability and strength.

4. Pin holes in heads of links cored smooth and clean by a special process of manufacture, and forming with the rigidly-held, smooth, hard pins, an excellent joint for durability.

5. Accurate pitch and small clearances, furnished by accurately made patterns and dies. This preserves the accuracy of fit between wheels and Link-Belt and makes both more durable.

6. Close-fitting joints, which keep out gritty material that might otherwise work in and cause rapid wear in many classes of work.

We also manufacture a complete line of link-belt for every service in saw and lumber mills, which includes Original Ewart Link-Belt, "400" Class, "H" Class, Pintle, Refuse and Transfer Link-Belt. Write for Saw Mill Catalog No. 260.

No Camp is Complete Without

Carbic Light

To the Lumbermen of Canada

YOU need light around the mill or in the logging camp at some time or other. Light that is good at all times, never-failing, always ready and safe.

In the CARBIC LIGHT all these are present. You need not be afraid of the CARBIC going out of commission as there are no intricate parts to worry you. Nothing dangerous, and nothing in the recharging that any unskilled laborer can not take care of.

You get better than 3000 candle power of pure white light for a very small cost, steady service, a light that will be in use for years with the proper care and handling. What more can be expected?

Read the Fine Points Concerning this Light

- 1—Candlepower remains constantly uniform. No diminution in brilliancy. The same degree of light to within the last 15 minutes of a full charge. YOU GET all the light you pay for all the time from Carbic—because
 - 2—Gas pressure stays constantly uniform. No soot, no smoke.
 - 3—Absolute simplicity. Only three substantial hollow parts which cannot be assembled wrong.
 - 4—Ignorant labor can't waste Carbic Cake in charging, recharging or cleaning.
 - 5—Simple charging. Just drop Carbic Cakes into Cake Holder, slip holder into gas bell and lower bell into water tank.
 - 6—No gas freed until you turn the valve. Over generation impossible.
 - 7—Simple recharging. Just add Carbic Cakes and water.
 - 8—Simple cleaning. Remove bell and cake holder. Slop water around in water tank and dump. This removes sludge.
 - 9—Economy in Carbic. Any unused piece of Carbic Cake has been only momentarily touched by water on under side. Remove it from holder and save for re-use.
 - 10—Safety. Kick over a Carbic, lighted. It goes out instantly.
 - 11—Big stocks of Carbic Cakes always on hand (at a uniform price) for quick delivery anywhere.
 - 12—Service. A Carbic Service Man at your command to advise on lighting your job most efficiently.
- A no-cost-to-you try-out of Carbic Lights under practical conditions on your own job is our proposition. This is what sells Carbic to cost-counting lumbermen.

CARBIC FLARE LIGHTS are in use all over Canada for Construction Work, Mill Work, Unloading Liners, Repair Work, etc.

Let the CARBIC LIGHT prove its worth at our expense. As many lights as required for a thorough test are ready to be shipped to your work—ABSOLUTELY FREE of all costs. This means we pay express or freight charges and ship CARBIC CAKES sufficient for the trial. Catalogues to those interested.

LEVIATHAN BELTING

Is Necessary To Your Mill

The combination of strength and tractiveness, toughness and flexibility, built into the "LEVIATHAN" is found in no other belting in equal degree.

LEVIATHAN BELTING is built to pull loads—to stand up and deliver anything but the impossible. It is perfectly "at home" on the heavy drags, under incessant loads, unyielding pulls, where loads are intermittent, and in all conditions where the belt must shoulder great responsibility.

Constructed of solid woven fabric of tremendous durability—has wonderful strength and easy running.

"Leviathan"

BELTS are stretched perfectly in their making—doing away with the ruinous "stretch" (with its resulting power and production loss) of "natural material" belting, and thereby maintaining limit of machine production through extreme limit of power transmitted.

The power user buying belting for strenuous, arduous and wearing Conveying, Elevating, and Transmission service, must come to understand that the ruggedness, toughness, strength and tractiveness, so vitally essential to best results in such service, cannot grow into a belt, but must be built into it. He will then understand why "LEVIATHAN" serves best and lasts longest.

The extreme tractiveness—absolutely lasting—of the "LEVIATHAN" makes it enormously successful in drives where the quality of the product depends upon smooth, steady running. For Conveying, and Elevating heavy materials, the "LEVIATHAN" stands supreme. The toughness and flexibility absolutely required for this sort of work, is definitely attained.

We invite inquiries and shall be pleased to give you prices and samples of "LEVIATHAN" suited to your class of work.

Write the makers:—

Main Belting Co. of Canada, Limited

MONTREAL—10 1/2 St. Peter St. TORONTO—32 Front St. West

CALGARY and EDMONTON

Gorman, Clancey & Grindley, Edmonton

A 24-inch x 10-ply LEVIATHAN, transmitting 350 H.-P. Installed ten years—now in good condition.

A 75-foot x 48-inch x 10-ply LEVIATHAN, 500 H.-P., 3 phase, 60 cycle, 2,300 volts, 600 r.p.m.; has been carrying a 600 H.-P. load since 1911.

A 16-inch x 8-ply LEVIATHAN that is giving good service.

A 12-inch x 6-ply LEVIATHAN; motor drive; giving excellent service.

ANACONDA

BELTING

Outclasses All Others

The tension at which ANACONDA Belts are stretched is in exact and definite proportion to the strength of the belt and the load it is intended to carry.

It inevitably follows, therefore, that in these belts there is always a positive and definite balance between the power (load) to be delivered, and the belt's ability to deliver that load under every working condition.

This scientific adaptation of ANACONDA Belts' construction to the especial class of service to which they are to be applied, accounts for guesswork giving way to guaranty for expectation becoming realization—in their service.

"Anaconda"

belts are constructed of solid woven fabric, of tremendous strength and durability, so treated, stretched and aged as to make a pliable belting material that is practically indestructible—has wonderful strength and tractiveness, toughness and smoothness of running—and in which the ruinous factors of "stretch" and "slip" are definitely eliminated.

"Natural material" belts are not equipped, either in material or construction, to deliver the quality or quantity of power, under varied and distinctive belt working conditions, as assured by the "ANACONDA."

For heavy conveying and elevating service—for heavy main drive, counter-shaft, jackshaft and important machine transmission, on all such drives, the "ANACONDA" delivers the last ounce of power expected of it.

How About Operators?

Prospective users of wireless usually ask us: "But what about operators? Aren't they hard to get?"

The answer is: "Not if you use C & W apparatus."

The old style sets, with their high voltage, low factor of safety and numerous critical adjustments, could be operated only by an expert, with a specialized training,—and such men are hard to get.

But C & W sets have a voltage of only 200 volts as against from 8,000 to 20,000 volts in the old style sets, a factor of safety of ten as against one and a half, and no critical adjustments. These factors make a set so simple, rugged, reliable and easy to operate that anyone who knows the code can operate C & W sets and keep them in operation—and learning the code is a simple matter, taking from four to six weeks. If C & W sets are installed in your forests, your wardens can operate them after a short training.

No C & W set has ever broken down in service; the initial cost of a C & W set is about one-quarter that of other sets on the market; the upkeep costs are almost negligible; and you can always get operators for C & W sets among your own men.

May we help you solve your problem? Details and expert advice from our engineers upon request.

DO YOU BURN Waste or Moist Refuse As Fuel?

Most Timber Mill Engineers do this, and then wonder why they are not getting the full percentage of heat from their fuel. The only way to successfully use up waste refuse is to install a COPPUS TURBO BLOWER.

Try it out. You will find it makes a marvellous improvement in boiler efficiency. It is particularly satisfactory under the grates of Dutch Ovens.

Send us the plan of boiler house, particulars of boiler sizes, steam pressure desired and nature of fuel, and we will submit a proposition for your consideration.

Here It Is

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

No. 15

Some Features of Canadian Lumbering Operations

Various developments and special features of the Canadian lumber trade in all its branches are dealt with in this issue of the "Canada Lumberman." Particular attention is directed toward efficiency in methods and economy in the matter of food and general camp supplies. Practical suggestions are presented by experienced men in regard to the most satisfactory and effective way of handling the help problem and keeping down expenses of administration and operation, so far as the logging and sawing ends of the industry are concerned.

Other topics of moment and magnitude are prominently featured in this edition which contains a mass of information and detail that will make it welcome for the compactness of its contents, the representative character of the subjects dealt with and the large amount of interesting, timely and helpful data presented in the advertising pages, where leading firms in all lines, connected directly or indirectly with lumbering activities, supply, demand or equipment, make announcements of value and importance.

With the year that has gone many new phases of interest have loomed up, conditions have changed radically and difficulties which in the past were undreamed of have been forced to the front for solution. On the other hand, there are encouraging signs on every side that the future contains much of promise and satisfaction. Prices for the finished stock are ascending all the while and bid fair to go higher, owing to decreased production and the many new uses to which lumber has been put due to exigencies created by the war. The whole character of the market has changed.

Taking a survey of the future the trade hopes generally as soon as victory is won by the Allies—and all signs now point to the speedy success of operations in Europe—that, during the process of readjustment and reconstruction the English market may again be available and sufficient bottoms placed at the disposal of large concerns, particularly those in Eastern Canada, so that trade relations of gratifying proportions may be resumed. There is no doubt that a great deal more timber will be required from Canada than ever before in order to accomplish the rebuilding of shattered Europe and the construction of public works of national importance.

The lumbermen of Canada have evinced their loyalty and patriotism in many outstanding events and have always shown a sympathetic co-operation in whatever course has been pursued by the Federal Government. They have revealed their willingness to do all in their power to conserve food supplies, inaugurate a policy of strict economy in camps and boarding houses and to the utmost save sugar, flour, meat and wheat that the men at the front may be strengthened and sustained. New rationing regulations in the camps will be rigidly observed and it is hoped that the Food Board will assist the logging companies in a co-operative way that the precepts may be lived up to fully and fearlessly on the part of all concerned.

The one disconcerting feature in connection with lumbering activities is the restlessness and independence of labor. While the skilled men in the plants are steady and reliable, those who do what is known as the rough work or the odd jobs seem to take particular delight in moving from one place to the other without any justifiable excuse and derive special pleasure in putting operators to any inconvenience or delay. On the whole these men have little to complain of. Conditions in general were never as satisfactory from a housing standpoint as they are at present. Good meals are provided and ample portions allowed to each, while the old wooden bunk and straw tick are disappearing, to be replaced by double-deck steel beds with substantial springs and comfortable mattresses. In not a few mills, men are allowed every opportunity after hours for recreation or sport, row boats and canoes being placed at their disposal and other courtesies extended. These concessions, however, do not seem to mitigate the general disquietude in the ranks of the roamers, who are mostly foreigners.

In the opinion of the trade there is a strong feeling that the government should step in and do something radical in the way of preventing, if at all possible, these men jumping their jobs and travelling from place to place with no idea of service or responsibility. It is true that the anti-loafing law, which has been put into effect has caused many would-be shirkers of employment to preserve an outward semblance of toil, but legislation should be carried a step farther and restrict the dominant spirit of a certain class who, by their conduct and attitude, would dictate terms and impose conditions such as no employer could tolerate or endure. Wages paid today are the highest ever known and living conditions in camps are the most desirable ever experienced, and yet the ebb and flow of common labor goes on unceasingly and each week appears to be increasing in volume.

Bringing the Sawmills to the Timber Limits

Lauder, Spears & Howland have erected splendidly equipped mill and constructed twelve miles of railway at Pakesley—All waste eliminated and production costs reduced to minimum—How the new plant is operated and the features it possesses.—Splendid progress made with construction and overcoming war time conditions.

To build and equip a modern sawmill of 125,000 feet a day capacity and construct twelve miles of standard gauge railway through the virgin forest connecting the scene of sawing operations with the Canadian Pacific Railway at Pakesley, 206 miles north of Toronto, is no small undertaking. That this enterprise is carried out within eighteen months at a time when war conditions have rendered the labor and material market in a most uncertain and unsatisfactory state and brought about industrial and manufacturing problems never previously encountered, the courage and faith of the operators executing the large project stands out all the more prominently.

Five years ago the firm of Lauder, Spears and Howland was formed with headquarters in Toronto. They erected a mill some distance back from the C.P.R. Sudbury line, and teamed in all their material and supplies from Mowat station on the Canadian Northern, ten miles away. The mill was built under favorable working conditions, for the war had not then broken out and the labor and material was easily available. The capacity of the plant, which is equipped with an inserted tooth circular saw, is 20,000 feet, and the principal product is white pine. It is known to-day as the No. 2 mill of the firm. Lauder, Spears and Howland foresaw the wooded wealth of the country along the banks of the Pickering River and bought timber berths in the township of Blair, Mowat and later in Wilson and Brown. The wood consists of red and white pine, spruce and hemlock, birch, basswood, ash, elm and oak.

Contract for 10,000,000 Feet of Logs a Year.

Recently a contract was entered into for a term of years with the Schroeder Mills and Timber Company, of which James Ludgate of Parry Sound is Ontario manager for 10,000,000 feet a year, log measurement of white pine. The Schroeder Company now have their headquarters at Pakesley and during the past winter operated six large camps. They have splendid white pine holdings in Blair and Mowat townships.

For many years logs have been cut and driven down the rivers and towed across Georgian Bay to the big saw mills at various points. A new idea has been developed by Lauder, Spears and Howland, who conceived the plan of bringing the mill to the logs instead of bringing the logs to the mill, thereby being able to handle the hardwood timbers which it was impossible to float down the streams, and also to market the hemlock bark which heretofore was a loss. Accordingly their latest enterprise has been undertaken twelve miles east of Pakesley station. Work was started in the spring of 1917 and by the fall a portion of the plant was in operation. The mill is now receiving its finishing touches while the railway is practically completed. It is known as the Key Valley Railway, owing to it following the course of Key Creek, which runs into Key Inlet, on the Georgian

Bay. It is a standard gauge road of about twelve miles in length and has three locomotives, several flat cars and a Ford bus fitted with iron wheels and covered with a large hood. This rather unique vehicle is used for carrying passengers and supplies of provisions and other materials to the mill. The line which is now being ballasted, is being built by Lauder, Spears and Howland and the Schroeder Mills and Timber Company as a joint enterprise. Denis Snaith has charge of operations and with the completion of the line the two mills of Lauder, Spears and Howland will have direct connection with the C. P. R., at Pakesley, and every facility not only for the prompt shipment of lumber, but also for getting in supplies for the mills and the camps in both winter and summer.

Ideal Location for Building Sawmill.

In building the new mill on a picturesque point on the Pickering river the location is on what is known as the "Lost Channel," about two miles from the main stream. This channel was named by the Indians "Kawigamog," which is said to mean "The Waters Return." The site is an ideal one for the shores are well wooded and as soon as the ice it out in the spring logs in sufficient quantity can be had in the mill pond within twenty-four hours to start running the mill. There the cut can be got under way very early and the product marketed without waiting late in the spring season for the timber to be towed scores of miles. Many of the logs are right along the banks of the Pickering and an east wind is sufficient in not a few cases to float them right down to the jack ladder without any towing. There is no loss of time in towing or in the sinkage of logs and no driving or river tolls to pay. All these costly conditions are eliminated in locating the mill direct in the logging area.

A good sized village has already sprung up around the new mill. Workmen's houses are being erected for the permanent employees, while a store, large storehouse, offices, stables, sleeping quarters fitted with double-deck steel bunks, mattresses and springs, dining hall, cook house, ice house, blacksmith and machine shop and all other accessories dot the surface, which was covered with the forest primeval less than eighteen months ago. A school house and church, post office and other modern facilities will be achievements in the near future. The rapidity and thoroughness of the work which has been executed under war-time conditions is little short of remarkable not to speak of the construction of the railway, the mill itself and the miles of trackage, yard conveniences and piling ground.

All Waste is Practically Eliminated.

In the design and building of the mill every modern device and installation has been incorporated. There is abundance of light and space and every contrivance has been introduced with a view to eco-

James Lauder, Toronto

Jos. Spears, Pakesley, Ont.

Lucien B. Howland, Toronto

nomy and conservation. What is known as mill waste is practically eliminated and thus the cost for cutting and handling in the mills as well as in securing the logs are virtually reduced to the minimum. Nothing is carried to the burner except saw dust and mill refuse, all slabs, edgings and trimmer ends being conveyed either to the slash table and cut up into lath or what is unsuitable for lath is automatically conveyed to the outside refuse carrier and dumped into cars. The trimmer ends will be sold for making matches, while the slabs and edgings will be disposed of in carload lots for fire wood. It is estimated that the saving thus effected will go a long way toward the cost of sawing the logs. Of course, some large mills have effected such a plan of conservation, but in a moderate sized mill, such as

The exterior of Lauder, Spears & Howland's new mill, showing sorting shed on the right

the one erected by Lauder, Spears and Howland, it is not usual to witness such up-to-date facilities. The mill building is 150 feet long by 58 feet wide, including the extension which is now under way to install a second unit and more than double the daily output. This addition will be completed this month. The plant is operated by steam power and there is a ten-stall sorting shed at the west end 120 feet long by 28 feet wide. Here the daily output of 125,000 feet is sorted and placed on high cars which are run by a dinky engine along the transfer tracks to the main line in the yards, and thus to the piling ground.

The mill itself has a hip roof covered with asbestos roofing, and at the west end is the refuse carrier, 40 feet long, and the burner 100 feet high and of 26 feet diameter. The mill is built on heavy wooden pillars which are set in concrete footings. The construction was carried out with a view to complying with all the fire underwriters' regulations and securing the minimum rate of insurance and is equipped with all modern fire fighting appliances.

The General Equipment and Lay-out.

In the basement are the shafts, belting and pulleys. On the top floor is the saw filing room, which is well lighted. This is equipped with Covell's patent band saw sharpener, Covell's circular saw sharpener, supplied by the Wm. Hamilton Company, Peterboro; Baldwin, Tuthill and Bolton (Grand Rapids, Mich.), re-saw sharpener, etc., all operated by a 12 horse power steam engine. In the power house, which is covered with a corrugated iron, are three Scotch boilers, each of 125 h.p. and supplied by Goldie - McCulloch of Galt. Each is 16 feet long and of 6 feet diameter, equipped with Dutch ovens. There is also 120 h.p. Wheelock engine supplied by Goldie-McCulloch, which is used to drive the present equipment in the mill; a 100 h.p. Atlas, slide valve engine, furnished by the A. R. Williams Machinery Co., will be used for the new unit now being completed. A vertical engine of 10 h.p. is employed for electric light purposes, and there are two boiler pumps, one for heating water for the boilers and the other for furnishing water throughout the building and yards, for fire protection purposes.

At the north end of the mill is the jack ladder conveying the logs from the pond to the log deck. The present equipment of the industry consists of a double cut band saw carriage with a 10-inch steam feed, steam kickers, loaders and niggers. There is also installed live rolls throughout and a horizontal band resaw, to which all slabs and small logs are transferred. All boards that require edging are sent through the Garland double edger. Live rolls and carriers convey the slabs and edgings to the slash table, which is 24 feet wide and fitted with six circular saws. The material from the resaw, after passing through, is conveyed to the slash table by worm rolls. After being cut by the slasher into four-foot lengths, all is dropped into a

conveyer at the north side of the mill and the wood suitable for lath and pickets is picked out. Other refuse, trimmer ends, etc., are also carried to the main conveyer. The pieces for lath, pickets, etc., are then put through a lath bolter possessing four saws and automatically transferred to a lath machine, after which the lath are graded and bundled. This equipment was supplied by the E. Long Mfg. Company of Orillia, while all the sawmill installations were furnished by the Wm. Hamilton Company of Peterboro.

Installation of the Second Unit.

The new equipment now being placed in position is also provided by the same firm and consists of 36 circular saw, Kendall gang, of the latest type, a Garland double-edger and twin circular saws, which remove the slabs from each side of the log previous to its going to the gang saw. The new unit is intended for the sawing of the smaller logs, while the larger ones will be cut on the band mill. The heavy slabs from the twin circular and band mill will pass through the horizontal resaw. The completed mill will, as already stated, have a capacity of 125,000 feet a day, and for the first few years the output will be principally white pine. It is the intention of the firm to cut between 15,000,000 and 18,000,000 feet annually with their two mills during the next twelve or fifteen years.

All the necessary cedar and hemlock ties for building the Key Valley Railway have been turned out at the mill. It is the intention of the owners to add later a planing mill and box shook plant.

The Personnel of the Organization.

The present organization of Lauder, Spears and Howland is composed of James Lauder, Joseph Spears and Lucien B. Howland. The two former are experienced and thoroughly practical lumbermen, having followed this vocation from their boyhood days. For several years they operated mills in the Haliburton and Parry Sound districts. Mr. Howland is a widely known railway man and contractor and was largely interested in the transportation and development of Haliburton and other portions of Ontario.

Mr. Lauder supervises the purchasing and selling end of the business; Mr. Spears directs the manufacturing and woods operations, residing for the greater portion of the year at the mills, while Mr. Howland devotes his attention to transportation. Lauder, Spears and Howland have offices in the Kent Bldg., Toronto, and do a large foreign and domestic business in all lines of lumber, particularly softwoods. With two splendidly equipped mills owned and operated by them, they are in an excellent position to take care of their rapidly

An end view of the mill, showing loaded high car

growing business. The members of the firm are all in the prime of life and able to carry on their important interests with energy, vim and determination.

Extensive improvements are being made to the Post Hammond Cedar Mill Co. at Port Hammond, which will double the capacity of the timber and shingle mill.

The saw mill and camp buildings belonging to M. McKenzie, Hope, B.C., on Kettle Valley Railway, was recently destroyed by fire. The amount of the loss is unknown. It is expected that the owner will rebuild.

Retail Lumbermen Take Educational Trip

Warm welcome extended the visitors by the trade in Montreal and the Capital—Splendid sails around Montreal Harbor and down the Ottawa River—A jaunt replete with interesting incidents and social features.—Advisability of organization for the welfare and progress of all members was strongly emphasized.

The educational tour of retail lumbermen of Toronto who were joined by representatives from London, Hamilton and Brantford, was most instructive and enjoyable from the time the party of twenty-five left the Queen City by the steamer "Toronto," on Saturday afternoon, July 13th, until their return by C. P. R., on Wednesday morning, July 17th. Alert yardmen who believe in visiting other centres to glean pointers and pick up suggestions have been to Detroit, Buffalo, Rochester and Syracuse in the last year or two.

It was decided that the educational outing this season would be somewhat different from previous pilgrimages, embracing both a water and rail trip, and at the same time necessitating absence from

Retailers having a chat on the upper deck of the steamer

home for only two business days. All the arrangements were carefully and expeditiously carried out by Mr. John B. Reid, chairman of the Lumbermen's Section of the Toronto Board of Trade, and Mr. Walter C. Laidlaw, who is a master of detail in connection with any function conducted by the trade, and is never weary in well doing.

The thanks of the entire party was extended to these gentlemen for their hard work and valuable time spent in giving so much pleasure to others. The manufacturers, wholesalers and retailers of both Montreal and Ottawa extended a cordial welcome to the visitors and their hospitality was sincere and unbounded. After a pleasant sail across the lake to Charlotte the members had the opportunity of viewing from the deck of the vessel several U-boat chasers which are being turned out by the United States Navy Department at the mouth of the Genesee River. The steamer headed diagonally across the broad bosom of Lake Ontario, and Kingston was reached at an early hour on Sunday morning. Most of the contingent was up betimes and from the decks drank in all the beauty and attractiveness of the splendid scenery of the St. Lawrence and viewed with keen appreciation the pictorial panorama of the ever delightful Thousand Islands.

The Sail Down the St. Lawrence

At Prescott the party transferred to the steamer "Rapids Prince," and the journey was continued eastwards to the commercial metropolis. At Cornwall a very pleasant surprise greeted the travellers, when they were joined by a delegation of Montreal lumbermen, in the persons of Wm. Rutherford, Arthur H. Campbell and F. S. Macfarlane, who were given a cordial reception. The exciting pastime of running the rapids was experienced by several of the company for the first time and every feature of the refreshing sail will live long in the memory of those who constituted the happy gathering.

Arriving at Montreal at seven o'clock in the evening, the delegation wended its way to the Windsor Hotel, which was the headquarters during the stay in Canada's commercial metropolis.

On Monday morning, bright and early, the members of the trade in Montreal joined the Toronto and Ontario representatives at the Windsor Hotel, and from that hour until the evening acted as hosts

in a varied programme which was thoroughly enjoyed. The chairman of the Montreal arrangements was Wm. Rutherford, who made an excellent presiding officer, from long association in this line, being a former Mayor of Westmount and at present chairman of the Board of Education of the beautiful suburban city which lies to the west of Montreal, and for many years has been noted for its high moral atmosphere, there being no hotels, liquor stores or even moving picture theatres within the municipality, while all the stores are restricted to one particular section. Westmount abounds in imposing homes and handsome lawns.

The members of the Montreal trade who extended such hearty greetings to the Ontario visitors were:—Wm. Rutherford (Wm. Rutherford & Sons Co., Ltd.), A. H. Campbell (Campbell-MacLaurin Lumber Co., Ltd.), F. S. Macfarlane (R. Macfarlane & Co., Ltd.) (Charles Graddon (Graddon Lumber Co., Ltd.), Fred T. Smith, Daniel Cream, W. A. Fillion (E. H. Lemay), Frank Pauze (U. Pauze & Fils Co., Inc.), George C. Goodfellow, J. P. Dupuis (J. P. Dupuis Ltd.), H. W. Gross (H. W. Gross & Co., Ltd.), Wm. Duncan (J. & W. Duncan, Ltd.), W. R. Graffey (Montreal Lumber Co., Ltd.), W. T. Mason (Mason, Gordon & Co.), Alex. MacLaurin and others.

Tour of Great Canadian Harbor

The first point of interest visited was the Harbor of Montreal, the steamer "Sir Hugh Allen" being placed at the disposal of the visitors. Mr. R. A. Eakin, paymaster of the Harbor Commissioners, with which body he has been associated for many years accompanied the lumbermen on a two-hour tour in which all important spots were visited, Mr. Eakin representing Mr. M. P. Fennell, Jr., secretary-treasurer of the Harbor Board. To give a detailed description of the many scenes viewed would require a very extended reference. The Harbor Commissioners have their own timber mill, and in the last few years have converted the port of Montreal into one of the most complete of any in the world.

One particularly interesting object was the new tug "Concreta," which is the first boat of its kind ever turned out in the Dominion. The hull is built entirely of concrete, poured into moulds and allowed to set, and the upper portion of the craft is now receiving the finishing touches. The "Concreta" has attracted wide attention and visitors from many American cities have come to Montreal to see this unique barque. Over the wharves of Montreal pass annually one-third of the imports and exports of the Dominion, and improvements to the Harbor

An early morning "sun bath" in the bow of the boat

represent a total expenditure of \$27,000,000, while the Commissioners have at their disposal \$6,000,000 more for further development. Montreal also boasts the largest seaport elevator in the world, having a storage capacity of 4,000,000 bushels. The dimensions of the elevator are 530 feet long, 128 feet wide and 202 feet high. The total elevator storage capacity in the Harbor is 11,500,000 bushels of grain, and there

are about eight miles of completed wharfage, capable of accommodating 100 vessels from 200 to upwards of 500 feet in length. Recently there were 32 freighters in port at one time and this, too, when a German U-boat campaign was the most active.

Camouflaging of the Big Freighters

A spectacular thing is the camouflaging of the various freighters, portions of the hull being painted in different colors, red, blue, green, white, black, gray, etc. This is done so that when at sea no distinct

After the tour of the Harbor in Montreal

outline of the boat is visible in the trough of the waves. It is exceptionally difficult at times to see any portion of the vessel, there possibly being the pattern of a stern painted at the bow and vice versa.

As one member of the party remarked in connection with the decoration of the ships, it looked as if half a dozen urchins or more had been given paint pots of various hues and being provided with brushes were told to go to work and cover as much space as possible with the material at their disposal.

The Duke of Connaught floating dry dock, which is capable of accommodating the largest existing vessel of the British Empire, and has a length of 600 feet and a width of 133 feet, with a lifting capacity of 25,000 tons, was another point of interest. Within the 59 feet high walls of this floating dock there is capable of being built any vessel from a dreadnaught to a full sized merchant ship.

The party proceeded east as far as Longue Pointe and witnessed the steel freighters which are being built by Henry Ford for ocean traffic and also saw the immense plant of Canadian-Vickers, where everything in the nautical line can be turned out, from a gasoline launch to a torpedo boat destroyer.

Luncheon and Drive Were Pleasant

Returning to the starting point the Montreal and Ontario lumbermen were taken to the Engineers' Club, where a splendid dinner was enjoyed, and afterwards in automobiles the party were conveyed to the Bank of Montreal, Notre Dame Cathedral, Lafontaine Park, Outremont, a ride around the mountain, another through Westmount and back by Sherbrooke Street to the Windsor Hotel, where hearty cheers were given for the Montreal men and the enthusiastic manner in which they had entertained the visitors, everyone in the commercial metropolis vying with the other in doing everything possible to make the altogether too brief sojourn of the Ontario deputation both pleasant and profitable.

Gordon C. Edwards, of W. C. Edwards & Company, paid a short visit to the Montreal and Toronto men during their stay in the commercial capital and assured the visitors of a big time when they got to Ottawa.

Early in the evening the travelling contingent of twenty-five left in a special parlor car by C. P. R. for Ottawa, where they quartered at the Chateau Laurier. On Tuesday morning, July 16th, the visitors were met by representative manufacturers, wholesalers and retailers of the Capital city, who could not do too much for their guests. Among those who joined in extending a warm welcome during the day and took the trip down the river in Senator Edwards' yacht "Katrina," were:—Hon. W. C. Edwards and Gordon C. Edwards (W. C. Edwards & Co., Ltd.), Geo. M. Mason (Geo. M. Mason, Ltd.), A. M. Davis (McAuliffe-Davis Lumber Co., Ltd.), E. A. Maxwell (Gilmour & Hughson, Ltd.), W. M. Ross (J. R. Booth), Grant P. Davidson (Jas. Davidson's Sons), D. G. Gilmour (D. G. Gilmour & Co.), E. R. Bremner (Watson & Todd, Ltd.), J. A. Belford (D. G. Gilmour & Co.), D.

R. Thomas (W. C. Edwards & Co.), E. M. Barrett (Barrett Bros.), J. E. Wilson (Ottawa South Planing Mill), M. N. Cummings, Westboro, C. B. Dougherty (Rideau Lumber Co.), D. K. Edwards (Geo. M. Mason, Ltd.), P. C. Walker (Shepard & Morse Lumber Co.), H. A. L. Swan (Sec.-treas. Ottawa Lumbermen's Credit Bureau), S. C. Robertson (W. C. Edwards & Co.), J. A. Wilson (Ottawa South Planing Mill). Among the outside guests were: Messrs. Jas. Edward, Divisional Freight Agent, G.T.R.; F. P. Tinker, District Freight Agent, C.P.R.; M. A. Thomson, District Freight Agent, C.N.R.; Benj. Rathwell, President, Ottawa Dairy, Ltd.; John Bingham, manager, Ottawa Dairy, Ltd.; Mr. Hamilton, manager Bank of Commerce; Mr. Provost (Provost & Allard); A. Scott, J. A. Spratt, and others.

Visit to Match Factory and Mint

All the day long automobiles were placed at the disposal of the "travelling club," as the touring lumbermen were designated, and the first point of interest visited was the match factory of E. B. Eddy Company, Hull, where the process of turning out lucifers by the millions was witnessed with much interest. It is said that since the new war tax on matches came into effect that the Eddy Company pays to the government \$3,000 a day on its output of matches. After a tour of this large factory had been completed a visit was paid to the pulp and paper making departments, where the various processes of converting the spruce pulp logs into paper of all kinds, and more particularly newsprint, were thoroughly explained. The visitors were impressed with the immensity of the Eddy industries and an inspection was also made of the sawmill of the organization, which is equipped with a double cut band saw and other modern installations, the lumber being loaded on wagons directly after passing the edgers and trimmers.

The next stopping point was at the Royal Mint, where the visitors, including all the Ottawa representatives, were conducted through the money-making plant, in parties of ten, and observed everything from the refining of the gold and silver metal to the turning out of the finished coin, in which the 100th part of a grain overweight or underweight, causes it to be thrown into the discard and remelted. The majority came away feeling that while they might be able to clean up some cash in the lumber business, yet if they were allowed uninterrupted access to the Mint for the space of fifteen minutes they would be able to make a greater pile during that time than in a life-long operation of a lumber mill or yard.

The large plant of W. C. Edwards and Company, at the junction of the Rideau River with the Ottawa, was the next Mecca. Just as the tour of the sawmill was begun the noonday whistle blew and the party adjourned, to complete the inspection later. The mills of the Edwards Company are most extensive and complete in every respect. The output is about 125,000 feet a day of red and white pine and spruce. The plant is equipped with one gang saw, one twin band, three band saws and two band resaws. All the equipment is electrically driven and the most up-to-date means of handling the pro-

An old time meal at Senator Edwards' shanty in Ottawa

ducts are installed. The other activities of the company consist of the manufacture of lath, pickets, munition boxes, box shooks, sash, doors, hardwood flooring, blinds, interior finish and trim, as well as shingles, dressed lumber and dry lumber of all kinds. The company are at present completing 125,000 shell boxes in their plant. They also operate in the city of Ottawa two large planing mills and conduct five retail yards, Mr. S. C. Robertson being manager of the retail department.

An old-fashioned pork and bean dinner, such as was served in the

camp of the Ottawa Valley many years ago was partaken of in the open air at Senator Edwards' shanty, which stands below the cliff in New Edinburgh, and is an exact replica of the accommodations and construction of the camps in the days of long ago. The shanty is provided with a scoop roof, the chinks between the logs being filled with moss and the bunks are at one side of the interior. In the centre, beneath an opening in the roof, which serves as a chimney, there is a fire place built of sand, for cooking. In this sand utensils were set and the contents kept warm by means of ashes and live coals. Of course, this primitive arrangement has been altered long ago to the more modern equipment of ranges. The shanty, so illustrative of the early lumbering days in the Ottawa Valley, was built by Senator Edwards a couple of years ago for the entertainment of his friends, and only recently the Blue Devils, on the occasion of their visit to the Capital were regaled with pork and beans in the same manner as were the retail lumbermen. In this connection it may be recalled that the lumbermen of Ottawa Valley at the period of the visit of the Duke and Duchess of York (now the present King and Queen) to the Capital in 1900 erected a typical shanty in Rockcliff Park which still stands as an interesting association of the Royal visit. On that occasion the Royal guests were entertained to a dinner of pork and beans, which the King and his good lady greatly enjoyed.

Senator Edwards' shanty is similar to the one built by the Indians in the forest primeval and handed down by the aborigines to the early lumbermen. The spread of pork and beans, while keenly relished, is, of course, not the typical bill-of-fare in logging operations today. For now jams, pies, cookies, fruit, cheese and other delicacies diversify the menu, or at least, have done so up to the recent regulations covering the allotment of food in camps.

Habitant Speech that Ticked All

Just before the departure of the guests for a sail down the river, Senator Edwards made a characteristic speech in which he narrated in the habitant language, the words of Wm. Whissell, who was a foreman for the Edwards Company for thirty-three years, and passed away some time ago. Mr. Whissell was a typical French-Canadian, who had been delegated to do the speech making for the lumberjacks who worked in constructing the Royal shanty at Rockcliff Park. Mr. Whissell told of some of his early experience in his quaint, naive way and spoke appreciatively on that occasion—which was in 1900—of his pleasant relationship with Mr. Edwards. He proceeded to tell how he had gone into lumbering operations himself and dropped \$17,000 in a couple of years. After this unfortunate experience Mr. Whissell had returned to the service of Mr. Edwards, and he wound up with this ingenuous digression:—"But some day, perhaps, me be too old to work for Monsieur Edwards, den I will go to England and see de King. Likely Hese Majeste give me a job in my old age and den I can work for him." With this somewhat startling bid for royal employment, Whissell, who had been worked up to a considerable pitch of excitement, slapped the Duke of York, or the present King, on the back in order to emphasize the happy suggestion.

Mr. Whissell being a large man and the King one of rather small stature, the Royal visitor was nearly knocked over by the blow, which was intended for dramatic effect. The King, however, greatly appre-

ciated the remarkably frank speech of Mr. Whissell, and to hear Mr. Edwards repeat the habitant oration after eighteen years is indeed a rare treat.

Between River Banks in Verdure Clad

The yacht "Katrina" was then boarded for a sail on the river. She is 100 feet in length, 14 feet beam and has a speed of about 16 miles an hour. The journey down stream was a delightful one and the Ottawa and Ontario lumbermen had a profitable intercourse on many topics of mutual interest. When within about seven miles of Rockland, the "Katrina" turned and the trip back was resumed, Ottawa being reached about five o'clock, after which a tour was made through the remaining portion of the Edwards' plant. The visitors were next taken for an automobile ride over the famous driveway which extends from Rockcliff Park along the banks of the Rideau Canal to the Experimental Farm. This driveway is one of the most beautiful and artistic of any in America and goes a long way in earning for the Capital city the well-deserved title of the "Washington-of-the-North."

On the way down the river Senator Edwards, who is now in his 75th year, had many interesting stories to relate of early days, particularly in connection with the sale of timber limits. In 1868 he established the first mill at Rockland, and in 1894 the property in Ottawa was acquired. The output of the Rockland mill today is 300,000 feet on the average and consists of red and white pine, hemlock and other woods. All the larger logs of the company are sawed at this point, while the smaller ones are taken care of at the plant in New Edinburgh. Gordon C. Edwards was particularly energetic in looking after the comfort and convenience of all during the day and his kind attentions did not cease until the party had left for home at 10.50 p.m. by the C.P.R. As the company left the "Katrina" after the sail on the river hearty cheers were given for Senator Edwards, Gordon C. Edwards and the Ottawa lumbermen.

In the evening the visiting retailers were entertained by the Ottawa retailers to a splendid dinner at the Rivermead Golf Club, which is located midway between Hull and Aylmer, Que., the jaunt being made by special electric car. From the broad piazzas of the club house a fine open view is obtained of the Ottawa River, the city itself and the Gatineau hills. George M. Mason, president of the Ottawa Lumbermen's Credit Bureau, presided in an able manner, and after ample justice had been done to the many tempting dishes provided, the toast to "The King" was loyally honored.

Welcoming the Travellers to Ottawa

Mr. Mason, in a few fitting words, welcomed the guests and spoke of the pleasure it had afforded the Ottawa men to show the city and its various points of interest. He was sorry that the stay of the delegates was so short, as they had only seen a small portion of the many attractions at hand. It would be a pleasure to extend all the hospitality of the lumbermen of the city on another occasion when he hoped their call would be of longer duration. The interchange of courtesies among the members of the trade he regarded as a good omen for all concerned in the interest of the co-operation and mutual welfare.

E. M. Barrett, chairman of the Eastern District of the Ontario Retail Lumbermen's Association, also added a few words of welcome, and spoke of the pleasant associations of the day. It was a great privi-

lege to extend greetings to his brother retailers and in this reception they had been joined by the manufacturers and wholesalers of the Capital city, of whose progress and development they were justly proud.

Walter C. Laidlaw, of Toronto, on behalf of the guests, said that he desired to express the thanks of all to the Ottawa gentlemen for their hospitality. "We have had a splendid day," he added, "and seen many interesting things, and we have enjoyed it all to the utmost. We in Toronto do not know how we can ever get even with you for all that you have shown us today, but when you visit our city, as we hope you will in the near future, we will do the best that we can to entertain you and give you a royal welcome. We have had the pleasure of meeting all branches of the trade, manufacturers, wholesalers and retailers, and you have left nothing undone to make our stay memorable. It has been a great privilege to visit the Capital city, which is a wonderful lumber centre, and our eyes have certainly been opened. We were also extended every courtesy and kindness by the trade in Montreal, and the travel club—for that is what we call ourselves some-

ferences of thirty years standing, had literally fallen over one another and shaken hands, become better acquainted and each had learned that the other was not such a bad chap after all. The ground had been plowed, good seed sown, and a fruitful harvest was the result. Now through the kindness of Mr. Laidlaw and others, the privileges of clubs were open to all the members for a monthly dinner. Each man ate a good meal, smoked a fragrant cigar and talked as freely as if he were at his own fireside. Any troubles were discussed, all grievances aired and considered, and everyone went away satisfied. A campaign of education had been carried on in the matter of figuring costs, profits and the percentage of overhead expenses in doing business. Literature had been published giving definite and practical information on these and other important problems. The old idea that if a man was making a dollar a thousand on a bill of lumber he was coining money, even if he had no knowledge of the cost of doing business—had been shattered and business had been placed on a better, sounder and more uniform basis. Out of these meetings the men of the trade had been brought together in Toronto in a spirit of co-operation and harmony and an-

times—has on each trip that it has taken been enthusiastically received. We have gained a great many ideas and we hope to see you all in Toronto at the great retailers' convention, which will be held during the Exhibition. We promise you a cordial welcome and trust that you will be present in large numbers."

The New Spirit Prevalent in the Trade

J. B. Reid, of Toronto, president of the Lumbermen's Section of the Toronto Board of Trade, was next called upon, and delivered a happy and stirring address, which was warmly applauded. He thanked Gordon C. Edwards and all the other Ottawa lumbermen, for the magnificent reception that had been accorded them, and remarked that Mr. Edwards had met the party in Montreal and had assisted the gentlemen in that city in welcoming the roaming retailers. He had, however, not given the boys any inkling of the good things that were really in store for them when they reached the Capital city. Proceeding, Mr. Reid said that the retailers had taken many trips to various centres across the border, but "this is the first journey among our own people, and we must say that nowhere have we been more regally received than right here in Ottawa and in Montreal. We have been used like princes, and I only hope that our fellows will do as well when you all come to Toronto, and find out what we are doing there." Mr. Reid referred to the fact that as yet there was no organization of retail lumbermen in Montreal, but he hoped that the day was not far distant when they would have an association there the same as they had in Toronto. Proceeding, he declared that up to three years ago, so far as sociability was concerned, the retail lumbermen of Toronto had never met within four walls. Some men had been in business in Toronto for thirty-five years and beyond talking over the telephone to other firms had never met others in the trade. In fact, men engaged in the same line of business for years had never seen one another, and had, in not a few instances, formed the conception that the other fellow was a mean, selfish, narrow-minded being, with whom it was advisable to have as little to do as possible. By persuasion and talk, by agitation and intercourse, finally the members of the trade were got together around a dinner table and after a couple of such meetings, men who had had dif-

other outcome was that the retailers of the north, south, east and west assembled in convention. Ontario was organized on similar lines, and the membership in the province was growing rapidly. The wholesalers of Toronto, seeing the fine work and association spirit that had developed in Toronto and Ottawa, had also come together and formed a like body, and established a Credit Bureau. Mr. Reid told how the Credit Bureau had been started, first among retail lumbermen, and added that if any unscrupulous contractor could beat a retailer or a yardman out of a nickle today, he deserved the nickle. (Laughter).

Mr. Reid dwelt upon the inauguration of the Credit Bureau and how Mr. Boulton, the secretary, and he, had attended a gathering of the secretaries of Credit Bureaus in New York State. "We found," continued the speaker, "that we could get no new ideas from the convention, that our bureau was strictly up-to-date in its methods and system, and that we were able to give some pointers to those from whom we expected to learn."

Other Splendid Work Carried Out

The wholesale lumbermen had started a Credit Bureau on the same lines as the retailers, and it showed the amicable relations existing between the wholesale and the retail men when there was one secretary and his staff attending to the work of both organizations. Mr. Reid enlarged upon the subject of business ethics, which he thought were largely a dead letter, unless there was some machinery behind it all. It had taken time, work and backbone to form the organization they had today, and if any wholesaler was not living up to his agreement in the matter of deliveries, etc., all a member had to do was to notify the secretary, who would get after the offending one. If a wholesaler failed to honor a contract, of course, a customer might go to law about it, but this was an unsatisfactory and costly proceeding. Any man, unless he had lots of money which he wanted to lose, should keep out of litigation. In some cases before the retailers of the province were organized, certain orders for lumber which had been standing over a year had not been filled. Several members had got in touch with the secretary, who, in turn, got after the delinquents. The result was that long delayed carlots had come to hand, or, where it

was utterly impossible for the wholesaler to fill the order, a satisfactory adjustment of claim had been made. Business ethics, with the proper organization or machinery to support them, were what was necessary for the welfare and co-operation of the trade as a whole.

In closing Mr. Reid denounced the practice of certain firms, or their representatives, in taking large orders and then offering all sorts of excuses, some of them very flimsy, for not filling the same. He said that life was larger than the dollar; an honorable, upright career worth much more than the making of a million. He would rather leave the memory of a decent, clean and honest name and have his fellow lumbermen attend his funeral as a last tribute of love and respect and remark, "well, he was a good man; he helped others and had a kind, generous nature," than he would to corral great wealth and have no members of the trade present at the final rites, and fellow business men generally declare, "I see Mr. Blank is dead—Oh, yes, he was worth a million, but he was never any good in life to himself or anyone else—small loss after all." "We should all live and let live, treat your fellow retailer as a white man, do everything open and above board, and when you go upon the last long journey, the trade will unanimously say, 'I am sorry that he has gone. He was a splendid fellow in every way.'" Mr. Reid believed the rough, uncouth lumbering business after all was the greatest and noblest on earth; they should do all in their power to uphold its best traditions and hand down to posterity a good name, a clean record and an honored career. He desired, on behalf of the visitors, to thank the trade in Ottawa for their kindness and generosity and particularly Gordon Edwards, who had been most untiring.

How Ottawa Trade First Got Together

Gordon C. Edwards returned his sincere thanks on behalf of the boys in Ottawa, and added that it had been a very distinct pleasure to welcome the Toronto men. Referring to early days in the Capital, the speaker said that the late James Davidson, whose son was present, was responsible for the Ottawa trade coming together and organizing, some fifteen years ago. Before that they were all suspicious of the other fellow and would scarcely pass the time of day with him. When a big strike of employees had occurred it had brought the trade together for their own welfare and mutual interest. "Previous to this if any firm was asked to figure on a bill of goods if it was known we were the last one to bid, we were pretty sure to get the order. We cut the price sufficiently to land the business. The same applied to other firms," added Mr. Edwards, "but the days of such senseless price-slashing are over long ago." The speaker told of the formation of the Ottawa Lumbermen's Credit Bureau in 1912. The executive committee met once a week to discuss matters pertaining to the trade. No man would continue in business today if he was told that his business was not on a profitable basis. He added that he had been associated with a number of leading organizations of lumbermen and he could bear out what Mr. Reid had said. Eliminating the business part altogether, the social end alone was worth far more than they gave it credit for—to become better acquainted and learn each other's good qualities. "It has," continued Mr. Edwards, "been a real pleasure to entertain you and we shall be glad to go to Toronto at some future date and give you a chance to get even with us. We will be happy to take a leaf out of your book and do some travelling and visiting as you have been doing in Montreal and Ottawa."

The guests then repaired to the wide verandahs to enjoy the inviting vista and after half an hour a special car conveyed all back to the Chateau Laurier. The C. P. R. train was soon boarded and amid cheers and parting handshakes the visitors left for home, convinced that they had heard, seen and enjoyed an abundance of good things in their all too brief sojourn to the commercial and political capitals of the Dominion.

Those Who Saw and Heard Much

Those who took in the educational trip were: G. W. Boake (Boake Mfg. Co.), Toronto; F. A. Bowden (F. A. Bowden & Sons, Ltd.), Toronto; R. G. Dryden (R. G. Dryden & Co.), Toronto; W. C. Gardiner (Builders Moulding Co.), Toronto; W. C. Irvin (Gibson, McCormack & Irvin), Toronto; T. H. Hancock, Toronto; C. W. Hillock (John Hillock & Co., Ltd.), Toronto; W. C. Laidlaw (R. Laidlaw & Co.), Toronto; C. G. MacBeth (R. Laidlaw & Co.), Toronto; T. A. Paterson (Mickle, Dymont & Son), Toronto; W. F. Petry, Toronto; R. Locke (Powell Lumber & Door Co.), Toronto; T. E. Rathbone (Geo. Rathbone, Ltd.), Toronto; J. B. Reid (Reid & Co.), Toronto; Alex. Rhind (Simpson Planing Mills Co.), Toronto; W. J. Smith (J. B. Smith & Sons), Toronto; John Watt (Watt Milling & Feed Co.), Toronto; G. H. Belton (G. H. Belton Lumber Co.), London; G. N. Kernohan (Kernohan Lumber Co.), London; O. W. Rhynas (Mickle, Dymont & Son), Brantford; Philip Rhynas (Mickle, Dymont & Son), Brantford; Thos. Patterson (Patterson & Crosthwaite), Hamilton; Guy H. Long (Consumers Lumber Co.), Hamilton; G. B. VanBlaricom (Canada Lumberman), Toronto; and Horace Boulton (Ontario Retail Lumber Dealers' Association), Toronto.

Fixing Lumber Prices to Buyer

It Might be Splendid Thing for Retail Dealer and Work Out to Advantage Generally

We retailers have for some time been wanting a stabilized price scale at the mills. We didn't care so much how high the prices were as we did to know that the other fellow was paying the same as we were. Now that mill prices and freight rates have been established we have attained what has been desired in our relations as buyers says C. H. Ketrledge in the "Mississippi Valley Lumberman." It's a question now, how would it affect us if the government takes the notion to establish our yard prices to the consumer. I am of the opinion that if it was done on the basis of the actual cost of doing business—as it will be—the scale of prices in the majority of cases would be higher than they are now, just as it is now with coal dealers. Most of them are getting a larger margin of profit than they did when they were making their own prices.

Some seem to think that the difference in freight rates will make it hard to make out a uniform scale. I don't suppose the relative difference in rates will undergo much change, if any. They will be higher no doubt. Some towns in the same county have always had a little better rate than others, but it has not appreciably affected the yard prices in any of the towns. Generally speaking, prices are about the same in places ten to fifteen miles apart, and this, too, without any special agreement between the dealers. The prices for each item can be fixed in the same way as now, but with reference more to the cost of selling them than they are now, and, therefore, relatively higher because some items are being sold right along for less money than they cost and the dealer is not aware of it.

As I understand it, the scale that would be fixed would be the maximum prices at which the items could be sold. The purpose of this is supposedly to protect the consumer. Theoretically, perhaps it does; practically, it is "bunk." What really does protect the consumer is the free and unlimited dern fool competition between the retail dealers which has always operated to prevent excessive maximum prices from injuring the consumer.

Just and Reasonable All Around.

Under this fixed maximum regime, there is nothing to prevent the giving of lower prices the same as now. But, here is where I think the fixed price plan will work out to benefit the retailer if he has business sense to take advantage of it. The psychology of it is all in his favor. The public will know and understand that the government has extended its sword of authority to prevent the lumbermen from boosting the prices of lumber to the consumer and the prices so established will be the prices they will expect to pay, because the "Great Father" at Washington has decreed that they are just and reasonable to the dealer. And if they are so to the dealer the corollary is they are just and reasonable to the consumer. This is the way that the general public will construe it, just as people are now regarding the coal and food prices that have been established by the same authority. And it seems to me that the retail lumbermen have never had so good an opportunity to sell their commodity on a correct business basis as they will have if this price-fixing plan is extended to them. For one thing, it will afford every dealer the discovery of the real cost of his doing business, something that two-thirds of them have never known all the time they have been handling boards to sell. What they will need under such fixed price conditions is such a degree of good business sense as will impel them to improve the opportunity which the wisdom of the government has placed at their hands. It is natural to "kick" against any change from the established ways of doing things. In this case there probably will be dealers who will object to what they will deem a restraint on their business, but if they have the sense to accept and follow it out they will eventually discover prosperity has, in a way, been forced upon them. Anyhow, the tendency will be for every dealer to keep close to the prices that have been fixed for him and the minimum prices will be more likely to be much higher than they have been.

The price fixing, as I understand it, is not designed by the government to prevent free competition, but it doubtless will have a restraining influence in some degree. How much this will be can only be known by subsequent experience. These fixed prices are likely to continue for a considerable period, so there need not be any apprehension on the part of the retailers concerning the matter of stocking up with this fall's supplies. My judgment is, if there is any change at all it will be to make the scale still higher. The severe drainage of labor by the contemplated army of five million men is bound to be felt by the producing interests of the country, and lumber production will be influenced as much as any other. And as great as our lumber producing capacity is, it is going to be fully tested by the inevitable increase in demand on the products of the mills.

Pacific Coast Products in World Markets

The Operations of Past Year Reviewed and Horoscope Cast on Future Development

—Lumber Commissioner will Go to England Shortly

By Hon. T. D. Pattullo, Minister of Lands, Province of British Columbia

Hon. T. D. Pattullo, Victoria, B.C.

The increase in production of all classes of British Columbia timber during the year 1917, compared with 1916, is 367,012,000 ft., board measure. This is a most gratifying state of affairs, when the decrease in available shipping, the car and labor shortage is taken into consideration. While the export of water-borne lumber to the United Kingdom shows a not unnatural decrease of 6,000,000 feet, and to South Africa a decrease of 5,000,000 feet, yet our export to Australia shows an increase of 14,000,000 feet, and the total export, as compared with 1916, shows a slight advance in favor of 1917.

Again, carrying on the comparison, the "cut" values have increased about one-third, which is commensurate with the increased production of lumber; the

value of the 1917 forest crop being \$48,300,000, while the figures for 1916 were \$35,528,000.

This record of a year of great stress, of a year when the demands of the army upon an already considerably depleted civil population has made great inroads into the available labor supply, is a year to which we in British Columbia can justly point with pride.

The following table will give the comparison between the years 1916 and 1917:—

	1916	1917
Lumber	\$21,075,000	\$28,225,000
Laths	150,000	142,282
Pulp	3,520,000	6,835,034
Shingles	4,500,000	6,900,000
Boxes	1,833,000	1,611,000
Piles and Poles	650,000	467,000
Mining Props and Posts	1,000,000	546,000
Miscellaneous (cut by Railroads, Mines, etc.)	1,150,000	1,425,815
Additional value constituted by the Industry	1,650,000	2,145,000
	<u>\$35,528,000</u>	<u>\$48,300,469</u>

Putting B. C. Products Before the World

The shortage of railway cars in the spring of 1917 was the main difficulty in the way of our placing B. C. lumber on the prairies. The decrease in the "floating" population will, no doubt, have its direct effect upon the movements of trains and consequently upon the available means of transport this year.

The Prairies have hitherto been looked upon as the natural market for our forest products. An energetic and entirely successful campaign of publicity in the Eastern Provinces has effectually put B. C. lumber before the world of architecture, of engineering, of the wholesalers and all who deal in wood.

As a direct result, the Eastern dealers now recognize the undoubted superiority of such timbers as the Douglas fir and Western cedar. The former is rapidly climbing up to its rightful place in the building world, and is acknowledged as being of greater tensile strength than its competitor, the Southern yellow pine.

The constantly increasing demands for this lumber show with the utmost clarity that, as the manufacturers and builders in the Eastern Provinces become more familiar with the many uses to which Douglas fir is adapted, so does their confidence in its durability, strength and beauty show in their renewed orders to the B. C. mills.

The release of shipping following the war will be the ultimate factor in laying our lumber down in the Eastern markets, via the Panama Canal, at prices which will allow B. C. lumber to compete with the forest products from other sources.

But is the Eastern Canadian market to be the goal of the forest

wealth of British Columbia? Stability will only come to the lumber trade with the utilization of the whole log, and thus the seeking of foreign markets seems to be the real solution of this problem.

Awake to Possibilities of Re-Construction

"Après la guerre," the period of reconstruction will call upon the lumber world with no uncertain voice, and this government is fully awake to the possibilities that will thus be opened. Perhaps a factor that is not to be ignored in establishing this new market, will be the 27 wooden steamers and the 18 auxiliary schooners that have been locally built, and whose first cargoes will be lumber destined for the Overseas markets.

The devastation of permanent buildings in France and Flanders, plus the total absence of new building in the United Kingdom during the war period, will undoubtedly call for a huge supply of lumber, and to meet this coming demand, the B. C. Government has decided to send a lumber commissioner to England. The results that in the East have followed an intelligent and aggressive campaign will undoubtedly prove to be even greater in the already depleted lumber countries, where the war has taken its greatest toll. With Sweden and Norway, we can compete with every hope of success. France and the United Kingdom have already practically exhausted the home-grown crop and therefore NOW is the time for B. C. to step boldly into the world market in order to secure a permanent trade connection, with its stabilizing influences.

Concrete Ship More than a Theory

The increasing use of concrete and ferro-concrete (into which the new development, the concrete ship takes place) will demand an enormous supply of the lower grades of lumber. The bridges and the buildings that have yielded to the all-destroying Hun, will probably spring up again, Phoenix-like, from their ashes in this more modern form. The concrete ship is now more than a theory; it is an actual floating and commerce-carrying fact. The concrete ship "Faith," on the completion of her maiden voyage, put into Vancouver to discharge her cargo, and the Master was most enthusiastic as to the vessel's behaviour under the very bad weather conditions experienced during her baptismal run.

We know that the amount of lumber consumed in the building of concrete ships is large, and towards the development of this method of increasing the world's tonnage, we look forward with a confidence inspired by this new vessel as to the further production of this type.

But the war has not only made us look into the future to realize the full forest wealth of the province. The abnormal increase in aeroplane production has naturally had its corresponding demand for aeroplane building timber, of which the spruce ranks first. To meet this demand, every effort has been turned towards accelerating the production of this timber, and an Act entitled the "Aeroplane Spruce Cutting Act" was passed at the last session of the Legislature to speed up the work. This has resulted in a wonderfully increased cut, and it is confidently expected that the output will fully meet the demand.

The Expansion of Pulp Production

Still another important feature of the lumber industry is that of the pulp and paper mills. Not only have all plants been running to full capacity, but new ones are being erected. The enquiries received as to the pulp possibilities in B. C. show that, so far as the province is concerned, this industry is but in its infancy. The increase in the year's production of sulphite pulp brings the remarkable figure of 300 per cent. to light; the production for 1917 being 43,644 tons, against 14,389 tons for 1916. Newsprint also shows an appreciable increase, the output for 1917 being 75,833 tons, and for the previous year 65,229, while the "wrapper" production was 3,170 tons. These figures justify the hope expressed in 1916, that 1917 would show a doubled production. Here again, the ingenuity of man is turning wood pulp to a variety of uses hitherto unknown, and there is little reason to doubt that the increase in the pulp industry will bring in its train the various means of turning out commercialities that mean increased revenue.

Looking back upon 1917, the year, in spite of the many difficulties to contend with, has been a most satisfactory one. Profiting from the past, we can look forward to the future with an equanimity born of the knowledge that the forest products of B. C. carefully and intelligently handled, are about to take a place in the world of commerce which is apparently the design of nature herself.

What Constitutes Efficiency in the Sawmills

Properly Laid-Out Mill with Modern Equipment, Careful Supervision of Operatives and Training of Help are Vital Factors in Production

By G. W. Brock

The call for men for military service, the high wages paid in munitions and shipyard plants, the drain on available labor by enlistments for forestry battalions and other branches of the overseas contingents and the restlessness of labor generally under the present exalted cost of living and numerous avenues of employment have caused lumbermen generally to encounter conditions such as they have never been up against before.

Shorter hours and more liberal pay have not tended to make content the general ranks of workers and the labor problem becomes increasingly perplexing. Much is heard about conservation and economy, and hand in hand with this must go efficiency and system. It is comparatively easy to institute new methods and try out new plans of operation under normal conditions, when openings for labor are neither so plentiful nor attractive, and there is more stability and cohesion in the working ranks than there is today. Trained effort, well directed and properly managed and encouraged, will naturally bring about improved results and augmented production, but, under present operating regulations in both the woods and the sawmills, contingencies have to be encountered and overcome such as were never dreamed of a few years ago. At many points labor has been very scarce, and any kind of help has been brought into requisition. The employer has to put up with oversight, indolence, and incompetency, which in ordinary times he would not stand under any circumstances, but with things in the labor market as they are, it is a case of cutting one's coat according to the cloth available.

Efficiency cannot be overlooked and every attempt must be made to reduce overhead and operating expenses and get out as large an output as possible. Although prices on all lines of lumber have increased and the outlook is for even higher figures, yet the amount obtained for the finished article has not kept pace—or, putting it another way—is no commensurate with the augmented expense of production. Higher freight rates, bigger wages, shorter hours, congested transportation, restricted markets, increased insurance, reduced cut in the woods, scarcity of labor and inexperienced help have all added to the troubles and problems which the sawmill men have to meet at this juncture. Very few new mills are, under the circumstances, being erected, and it requires the exercise of the best thought, skill and advanced manufacturing ideas to overcome all the barriers that beset the pathway of the lumber manufacturer.

Reports from different sources classify some mills as being modern and efficient as applied to the newer or larger plants, and some of the older or perhaps smaller ones as not being so "up-to-date." This raises the question of what constitutes efficiency in the average sawmill.

There are some features of operation in the larger mills that, in a broad sense, might be taken up by the smaller ones, and might tend toward efficiency. But arguing the other way, if a small mill, even if it is not the most modern in construction and design, is producing good results and for the time being meets all requirements in a satisfactory manner, who is there to say that this particular mill is not efficient in its owner's eyes?

He is satisfied with it; it meets his needs; does the job he gives it to do in a specified time; and is capably handled as far as equipment goes. Is such a mill in its smaller way just as efficient as the newer or more modern one with a larger output and greater outlay invested in its construction, machinery, etc. Whether the answer be yes or no, it leads to a series of other questions, all centering around the hub of "What is sawmill efficiency?" By what rules or standards can it be gauged in a general sense covering the conditions? Lumbermen themselves are best qualified to debate the issue and come to whatever conclusion that they think is best.

In a sense it is almost seemingly impossible to apply all the variable factors which are in use as tending toward efficiency in a large mill, and crowd them into a smaller one, irrespective of operating conditions and cost. As an instance, how many small sawmills use steam feed? It is recognized by leading manufacturers as being in advance and a better system than other modes of feeding the saw. The cost per thousand feet sawn is about the same as where other feed systems are employed, but the original outlay for the installation of the steam feed system is greater. Taking it on this point, for the sake of argument, any small sawmill not using steam feed would not be entirely efficient as compared with the most modern mill.

But there are many sawmills in the Dominion who develop a degree of efficiency satisfactory to themselves, meeting their peculiar conditions, whether they use steam feed or not.

Aside from contributory factors, there are only three outstanding rules tending to promote efficiency in the considered "efficient" and "non-efficient" sawmill. Few as the regulations are they cannot with

Effective Type of Log-Hauler

Here is shown a gasoline log-hauler at work in Madawaska County, New Brunswick. Experiments are being carried on in other eastern provinces to see if this type of log-hauler will simplify some of the problems of hardwood transportation.

impunity be disregarded by any sawmill man if he desires to evade the rocks of disaster and reach the port of economy in a business sense.

Three Things to Be Kept in Mind

The three factors as given by a leading manufacturer are:—

Plan your mills to save labor and eliminate waste.

Use the most effective and up-to-date equipment.

Careful schooling of employees and operators of machines.

Every one of the three is important, and with any kind of foresight and administration should prove effective. Not everybody today is going to re-build his sawmill, while some, where they can see a saving of labor can be gained, probably hesitate to make the change. owing to the increased cost of installations, and the somewhat unsettled outlook as to business.

Nevertheless, the man who has the courage of his convictions, recognizes prospects ahead, and knows whereby he can save labor if the expenditure is not too heavy, should do so. With the present high cost of labor in time to come he would be compensated and his mill increased in efficiency.

Having a properly laid-out mill, constructed for the conservation of labor and time, the next all-important feature is reliable and modern machinery, which in the operation of itself, speeds up production, lessens working cost, and is generally more satisfactory. Many sawmills in the Dominion, owing to the war, are operating on a "day shift" only. Thus, if it cost \$20,000 or \$30,000 to install equipment which would do double the work of that in use, it would take it twice as long, under existing conditions, to make up the increased outlay and pay for itself, as if the mechanism had been purchased at the same price in peace times when the mills were running day and night.

The training of employees and machine operators is perhaps one of the most important of all the factors, be they few or many, toward increasing the efficiency of the sawmill. The war as reflected in many sawmills and woodworking plants has plainly demonstrated the great value of trained labor and millmen. Apprentices from time to time have drifted in to fill the position of the experienced hand who has been attracted elsewhere by higher wages or has answered the country's call and, in some instances, the result has been little short of lamentable.

Employees Cannot be Hand Picked Today

Sawmill and woodworking plants are forced to accept pretty nearly any kind of labor that is offered. The operator cannot afford to take a chance of handpicking his employees. Some mills are more fortunate than others. In this connection skilled labor, especially if it has been employed in the same mill or on the same machines for a number of years is a very salient factor tending to efficiency. As one lumberman some time ago remarked, "you cannot take men off the street and put them running a machine." The percentage of accidents to the men themselves being unfamiliar or unskilled with the operations in the mill would result in considerable compensation claims, to say nothing of the damage they might do to the equipment.

Taken all in all the question of sawmill efficiency apparently sim-

mers down in a last analysis, to the most effective, economic, and productive basis as compared with existing conditions, the means of operation one has at his disposal, together with as many factors from the bigger mills that can be worked in, as to give an adequate return for the capital invested.

There are no mill operators who do not value efficiency and look for it. They are more or less constantly observing this man, the operation of a particular piece of machinery or saw, and constantly turning over in their mind whether this workman at a particular job can be improved upon or whether a particular installation is living up to its capacity. Week in and week out during the season's operations these instances continue to crop up. Sometimes changes are made quickly, and at other times they are delayed until the winter repairs are effected to the mill.

With such a perpetual train of events the mind of the owner or operator is ground down to a fine point of observation. What he sees he usually remembers, and if of sufficient importance transfers it back to the store room of his brain for further reference. Thus the constant trend in a sawmill is always tending toward greater efficiency if the operator is circumspect and painstaking, and is not too prejudiced to see and admit some points where he is wrong or whereby the system or operation of his plant can be profitably or more usefully improved.

Making the Most of Means at Hand

In one large Eastern sawmill, changes or improvements have been made from time to time. Efficiency, economy, and capacity production when wanted, may well be termed the three watchwords of the mill. Yet the proprietor has not every new device on the market in his mill. He does not even use the time clock for his employees, but still, his plant is efficient according to his needs. Who is there that is going to tell this man that his mill is out of date or not efficient because he has not consigned certain things to the scrap heap. He is recognized as a leader in his line.

His sawmill is established and operated on the same basis of sound business principle as are all his other undertakings. In the last ten years there have not been very many great changes. He has used band saws for thirty years. One of the biggest alterations made was the employment of a horizontal re-saw instead of a circular re-saw. This change in itself points toward economy or could be likened unto efficiency, as the old circular system used to take out three-eighths of an inch in sawing, while the horizontal re-saw takes out only about one-third of the amount in the cut.

Another condition with which the mills have to contend is the reduction in the size of logs that have been coming to the mills the past few years. Whether or not the sawing of the small log or the large one has any particular bearing on the efficiency of a mill is a question. It is known that it increases the cost of production as compared with its marketable value. It appears that it would have some influence on efficiency on account of the labor employed, compared

Conservation of Wooded Wealth

In this picture is shown the unnecessary waste in leaving large tops of trees in the woods. This is an age of economy and thrift. The photo was taken by G. H. Prince, Chief Forester of New Brunswick, during the past winter.

with the lessened return which the product brings, on a ratio with the work and market value, had larger logs been used.

Years ago 12-inch logs were common around the mills. Today the general average is below this. The smaller log is due to closer cutting on the limits to eliminate danger from fire, and because of their proximity to streams. The "big stuff" was cut long ago.

In connection with the increase in the cost of sawing small logs as compared with large ones, another operator remarked: "It increases the expense very materially and amounts to about twenty-five per cent."

Contentedness of labor in the sawmill is a contributory element tending toward efficiency and also the utilization of all waste.

The steam feed system as used tends toward efficiency in that it carries heavier loads right up to the saw and is more elastic than the other feed systems employed—i.e., electricity and water power.

In the opinion of another widely known lumberman sawmill effi-

ciency can be advanced by the use of up-to-date machinery, with plenty of "transfers," live rolls and lots of power. The design or layout of plant, together with competent help are essential elements toward efficiency. Regarding the use of by-products of the mill for fuel to promote power, the speaker added, "we never aim to waste anything."

"It all depends on the layout of the mill, the use of modern machinery, and placing it where it can be most conveniently and usefully operated. Schooling and intelligent training of help is a big factor," remarked another lumberman.

"Concerning the sawing of smaller logs as compared with those of other years," he added that at his mill a gang saw was used to cut them, operating upwards and downwards. The lost or increased cost of production can be traced to the operator not getting so much lumber from his logs and there are more knots. The lumber is not of as good a quality and consequently brings a lower price when marketed.

Piers, Booms and Log Drive in Lumbering

By Romeo Morrisette, Three Rivers, Que.

From time immemorial, lumber has been greatly used as material for construction, and on account of the developments expected by the after-war problems, the demand will be larger than ever. Eastern Canada with its magnificent forests is destined to be a big factor in the supplying of lumber. Hence the problem of log drive is one of the most important. Rivers cross our timber limits in every direction and are the natural outlet of the logs.

In this country, the railroad is very seldom made use of for this purpose, while the increased discharge of our rivers, due, to spring freshets, is found the most economical way of carrying the timber from the limits to the mill site. But, before reaching this point, the logs have to be handled under certain conditions that the writer will try to explain.

Our Canadian timbers considered floatable may be summarized as follows: The black, grey and white spruce, white, yellow and red pine, tamarack, hemlock, cedar. Their constructive value for housing, trestles, cribworks, etc., is well established.

The first operation in the forest is the hewing. The tree is chosen, cut at a certain height and laid on the ground. Logs ordinarily thirteen feet in length are measured and sawn from the trunk, also from the principal branches when their diameter is large enough. The logs are loaded on sleighs drawn by teams of horses and piled up on the log jetties.

Log jetties are placed on the banks of rivers or creeks. These sites are cleared of trees and bushes, and from there, the logs are rolled to the stream when the freshets occur. When they reach the river they are driven by the swiftness of the current to a general retaining boom, which is called the "Main Log Drive."

Along their course, little conductor booms or crib jetties are placed at the head of the shoals to force the drive to follow the current of the stream.

This conductor boom is usually composed of a series of round timbers, 20 feet in length with two border holes at both ends, through which is passed a chain binding two pieces together; one inch chain is ordinarily used. Jetties are little cribworks longer than wide, not very high, which are sunk at the head of a shoal to direct the current in an opposite direction.

Retaining Boom and Construction of Piers.

The principal feature of a retaining boom is the general place where the logs are gathered before reaching the mill or the assorting gap. It is composed of one, two or three ply boom fastened to piers; these booms are kept in place by chains held at the bottom of the river by anchors or anchor piers.

There are different kinds of piers; but the most generally used is the cribwork. There are many photos and drawings showing the different types of piers; also on one plan are given the principles governing the resistance and overturning forces of a pier.

The principal woods used in their construction are hemlock, spruce and B. C. fir for the body of the pier, and when an ice-breaker is used, it is ordinarily sheathed with oak, birch or elm, which are recognized as offering great resistance to the ice. In such pier the part under water lasts indefinitely, but on the other hand the part exposed to the air and moisture lasts an average of fourteen years.

The piers are built of round, flat or square timber, the pieces are placed one over the other, alternately, and crosswise fastened with spikes and screw bolts to vertical posts. Rooms are provided for the filling in with one-man stones which are placed on a ballast floor.

When a pier is to be built, study must be made to determine the direction of the current, soundings taken to know the topography of the bottom, test pits to ascertain the nature of the bed; if the bearing power of the soil is found insufficient as when composed of soft clay, or washable as in the case of alluvial sand bottom, foundations or pile works are necessary, in the first case, and a prepared stone bed in the latter. The dimensions of the crib are decided upon, the length of the crib must equal the height between the water surface and the bottom. However, in the case of a very large pier, this rule has not always been followed on account of the heavy weight of the pier, where small pressure was exercised by the current, and the pier found sufficient to resist to the overturning force. But in a little low pier, it is advisable to be careful to follow this law closely. A good dimension for the room of a pier is ten feet by ten feet. The ballast floor is placed at the third or fourth row from the bottom, to permit a perfect settlement of the structure. Ordinarily two opposite rooms are left empty for some ten feet high, the opposite corners on the diagonal are found very suitable to help this settlement. On a large pier, the cross ties, half the distance between the water surface and the bottom are designed alternatively to their alternating lines to help the ballast floor to resist to the heavy load of the stone filling in. The vertical posts are made in many lengths, they are spliced at their extremities and well bolted, holes are bored 1/8-in. smaller than the bolt diameter. The longitudinals and cross ties are fastened with one-inch spikes; holes are firstly driven with borer and the spike forced in it with a hand hammer.

Above the low water level, a three-inch sheathing is set on the four faces of the pier, except, where there is an ice-breaker, the batter is one-in-one, a six to twelve inch hardwood sheathing is used. In the centre of the pier, one or two vertical posts, twenty inches in diameter are placed. They are called mooring posts and they are well bolted to the cross ties and longitudinals. Their duty consists to hold back the boom by means of BBB 1-inch dredge chains.

As shown by the photos, square timbers are also used in large quantity. Recently, the construction of concrete piers has been introduced and proved to be economical.

In whirlpool or bay, the pier keeps its rectangular form up to the top and no ice breaker is used.

The average price of a crib when built in round timber is approximately \$4.00 per cubic yard; in square timber \$6.00 per cubic yard, and in reinforced concrete \$12.00.

The unit price of material being summarized as follows:

Stone	\$2.00 per cubic yard.
Hemlock and spruce	15c per lin. ft. (round)
Hemlock and spruce	17c per lin. ft. (flat)
Hemlock and spruce	20c per lin. ft. (square)
B. C. Fir	\$45.00 per 1000 ft. B. M.
Reinforcing steel	\$5.00 per 100 lbs.

The wages may be summarized as follows:

Laborers	\$ 2.00 a day.
Carpenters	3.00 a day
One horse	3.00 a day
Team	4.50 a day

Five men take in an average one day to build one row of crib-work fifty feet by fifty feet.

The Resistance of a Pier.

Three forces are considering acting on a pier: The first, the hydrostatic pressure which is applied at the third of the height from the bot-

tom to the water surface; the second, the current pressure applied at the two-thirds of the same height; and the third the force acting at the surface of the water due to the log pressure.

In this case the hydrostatic pressure has been found as 2,189,000 lbs. The second pressure being found as 18,412 lbs. The section of the river considered being 63,000 square feet, the maximum discharge 200,000 cubic feet second, the velocity of the stream 3.1 feet second. The surface of the pier being 1,856 square feet. The third pressure, the log pressure is taken as 230,000 lbs.

The magnitude of the resultant of these parallel coplanar forces is 2,437,412 lbs. applied at 31.30 feet from the bottom.

The dead weight of the pier being 4,274,143 lbs. the unit weight of materials is taken as follows:

Concrete in the air	145 lbs. per cu. ft.
White spruce in the air	26.4 per cu. ft.
Stone	125 lbs. per cu. ft.
Submerged stone	62.5 lbs. per cu. ft.
Submerged spruce	36.1 lbs. per cu. ft.
Submerged concrete	83 lbs. per cu. ft.
Submerged cribwork filled in with stone	43 lbs. per cu. ft.

The factor of safety for the same pier is determined as 1.85, and the overturning moment as 9,838,000 lbs. feet. The resolution of forces on the lowest parallelogram is determined for the same pier when it is not under the log pressure.

Then the log pressure having been established as 239,000 lbs. as the pier which served for the calculation was a proposed concrete pier, the steel reinforcement had to be determined. The area requested was 38 square inches of steel.

Proceeding in the Construction of a Pier.

During summer, a pier is generally started near the shore where the bank is steep and the water deep. The materials are easily handled. The crib is built for many rows and the structure is towed to the

Places selected as assorting gaps for logs

bed site with tugs; anchors are sunk in different directions in order to keep the pier in position. Stone is carried on flat scows, hand or steam derricks are used to unload and fill the crib.

The most economical way to build is during the winter. The ice is sawn in the proper dimensions, the crib is sunk proportionately to the progress of work, leaving only two or three rows over the ice surface.

Canadian winters offer great advantages for transportation of timber, stone or other materials. However, for concrete piers summer is the best season, otherwise the concrete has to be heated, which adds considerably to the cost. Some concrete work done recently under winter conditions amounted to \$25.00 per cubic yard at the site, where the stone and sand were easily handled.

Anchor Piers.

Anchor piers are built with the purpose of retaining chains tight to a line of boom, serving to guide them and sustain their lateral pressure. These piers are of small dimensions and covered by water, a chain is permanently set down in the pier by one end and by the other to a wooden buoy; during fall when the booms are placed in winter quarters, the buoy shall permit the location of the pier during the next spring freshets. Heavy cast iron anchors are also used for this purpose; however, the anchor pier gives better results as to the sliding and overturning forces which are diminished.

Such anchor piers are built in round wood approximately 20 x 20 x 15 feet, with vertical posts at the centre and four rooms. The

chain is attached at approximately ten feet from the bottom and tightened to the longitudinal, cross ties and vertical posts.

The square timber used as face timber is 12 x 12 inches in dimensions. The sides of the crib are built vertically except otherwise specified, the joints of the face timbers are butt joints, and notches are cut every ten feet, in order to receive the dovetailed ends of the cross and longitudinal ties. The notches are carefully made so that the dovetails shall accurately and tightly fit them and shoulders closed up against the back of timber. Ordinarily a good depth for the shoulder of a notch is two inches. When the cross ties and longitudinal are in more than one piece, pieces must alternate for three

General view of concrete log slide at Shawinigan Falls, Que.

feet at each end, and this when in case of a cross tie over a row of longitudinal. When this case is encountered in a face timber the splicing is made for three feet approximately and well bolted.

On the third or fourth row from the bottom a ballast floor is placed consisting of round sticks of timber of not less than 8 inches in diameter and at least ten feet long heads and points with breaking joints. These spars are perfectly straight. The ballast stone should be one man stone with not less than one square foot on a face.

The one-piece conductor boom consists of one log of approximately 20 feet in length fastened to the next piece by a chain. Such boom costs approximately twenty-five cents per lineal foot.

Other conductor booms are made by fastening together four logs some thirty feet in length, eleven inches at the smallest end bolted at both extremities of the piece where the bolts are crossing. Their cost is approximately ninety cents per lineal foot.

There are also the two-ply booms 20 feet long; two pieces of square timber 15 inches are fastened together. The timber used is B. C. fir. The cost of such boom is approximately \$1.65 per lineal foot. Screw bolts 1 1/4-inch in diameter and washers are used.

Alluvial matters are generally deposited on these booms when stretched during a whole season; before placing them in winter quar-

The logs approaching the slide

ters, a kind of metallic hand scraper is used to remove all vegetable matter which has grown on them. This operation lengthens the life of the piece.

On large rivers, where there are different firms interested in the log drive, places are selected as assorting gap. Such gaps are situat-

ed at the centre of the river and logs which have to be retained for local mills are sent aside in private booms while others are left, going down to firms located below on the river. An opening at the head of the general channel is designed in the form of a funnel, piers are distributed along its sides, one, two or four ply booms are stretched to guide the logs. These booms reach the shore and are attached at intervals along their course by big chains which are fastened to anchor piers, cast iron anchors, or iron cramps driven in the rock of shore. The duty of these chains is to receive the lateral pressure of logs in movement inside the boom.

In leaving the general opening, two chains of booms are placed alternatively some 16 feet centre to centre along which are distributed openings or gaps some ten feet wide through which logs are driven with gaffs to the private boom.

Building an Assorting Gap—The Cost.

At the head of the main channel, twelve men with gaffs, plunge logs under a one-ply boom directing them towards the main channel. Along the boom, other men turn the logs so that they run crosswise, and reach the gap, the butt end first in such a way as to give just a little push to facilitate their entrance into the private boom. Should there be too many logs, the assorter retains as many as he can, leaving the other for the following gaps.

Where the drive is made on large scale, logs are sent to a centre retaining boom, from where they are carried by an endless chain conveyor, operated by an electric horse power motor, placed on a floatable platform. The motor is directly connected to the conveyor by a shaft. In this country where the electricity is abundant, it is

How a large cribwork pier looks

the most economical device. The capacity of a thirty horse power motor connected with such conveyor is 20,000 logs per day. In the main channel approximately 150,000 logs are assorted every ten hours. To operate a two branch assorting gap it takes approximately eighty men paid two dollars a day.

Below is given the cost for the construction of an assorting gap, composed of sixteen pieces of eight ply boom varying from 28 to 50 feet in length and fifteen inches deep, also, two platforms for the conveyor 15 feet wide. It takes approximately three pieces of timber for each boom. The cost can be summarized as follows:

5,124 lineal feet or 76,860 ft. B. M. of timber	\$3,304.76
Bolts and iron, 13,086 lbs.	654.30
Wages	1,412.55
Materials and tools	226.21
Contingencies	21.62
	<hr/>
	\$5,619.44

Reserve Booms—How They Are Built.

The reserve boom is placed on the river where the logs are kept in reserve for the future. There are two ways of placing these logs:—10.—They are sent there pell-mell. 20.—Each log is drawn and corded vertically. This last expedient is very convenient when the company has a little area on the river to dispose of. It is estimated that four acres in area in a boom can contain 1,000,000 feet B.M. of log. On Canadian rivers, there are lots of cascades and falls which necessitate improvements in order that the logs reach their point of destination without being broken and too much worn out by the rubbing on stone and rocks in the rapids. Special devices have been used to preserve the logs against accident which can lessen the value of the lumber. Wooden weir are used to close certain portions of rapids

in order to force and change the direction of current increasing the water pitch with certain advantages. On creeks, gate or stop log sluicing dams are built; they are of the crib type. In certain periods of the year, when the water is low, the gate is closed, raising the level of the lake and its sudden opening causes an increased flow of the creek which attains a satisfactory pitch.

Where there are falls log slides are built. Formerly this was done by building a wooden channel on trestles with a convenient gradient. The slide was of rectangular form. Improvements have been brought about by using steel or concrete of suitable form in the recent constructions.

The photos herewith attached show a slide built at Shawenegan Falls in 1916. Its height is 130.28 feet and its total length 574.9 feet. The approximate cost was \$35,000.00. The material employed was concrete, steel reinforcing, steel plate channels, steel gates and gate hoists.

On the river St. Maurice, to which the great part of the above given data come from, the yearly cost of maintenance for the assorting gaps and the drive of some eleven million logs from La Tuque to Three Rivers, a distance of 105 miles, is approximately \$80,000 per year.

Death of Mr. Robert Stewart

Robert Stewart, head of Robert Stewart, Ltd., who was in the lumber and planing mill business in Guelph for the remarkably long period of 63 years, died recently from pneumonia. Although over 90 years of age, Mr. Stewart's intellect was clear, and his interest in his business, which he had built up to large proportions, never waned. Mr. Stewart was the master of every detail and a man of splendid executive ability and comprehensive grasp of the principles that underlie success. When he went to Guelph it was a place of about 4,000 people, while today, the city boasts of nearly five times this population.

The late Mr. Stewart took a keen interest in the affairs of the Royal City and watched its development with pride. He was born in Halton on March 10th, 1828, and remained on the farm until 1845, when he came to Toronto, where he worked as a carpenter and joiner. In 1851 he went to Milton, and three years later finally located in Guelph. He was a member of St. Andrew's Presbyterian Church, and of Speed Lodge 180 A. F. and A. M., having been affiliated with that lodge in 1866. He enjoyed the confidence and esteem of the trade, and his passing marks another break in the ranks of the veteran lumber merchants of the province of Ontario.

Mr. J. P. Newman Passes Suddenly

John P. Newman, of Wiarton, Ont., passed away recently at his home in that town, the end coming suddenly. He had been in the retail lumber and planing mill line for the past 28 years and was widely known and highly respected. He was at his office as usual during the day of his death and showed no signs of illness until a few minutes after retiring, when death resulted quite unexpectedly through heart trouble. Mr. Newman was a life long Methodist, and in politics a Liberal. He warmly supported every move for the advancement and welfare of the community, and his demise caused general regret, not only among his fellow citizens, but in the ranks of the retail lumbermen, where he earned the confidence of all by his upright business methods and sterling character.

Assistance to Build Workmen's Houses

Initial steps have been taken by the Ontario Government to solve the housing problem in the province. Sir William Hearst, who has given the matter a great deal of thought in the last month, announced recently that the Cabinet had approved a generous scheme by which a loan fund of \$2,000,000 will be created to enable municipalities and building institutions to construct workmen's houses and offer them to working men and women on easy terms of payment. Legislation is being drawn up for presentation to the next session of the Legislature to carry the proposals into effect and to ratify any by-laws or proceedings properly taken by municipalities in the meantime, with a view of taking advantage of the proposed scheme.

Under the proposal any municipality desiring to take advantage of the fund must agree to add at least 25 per cent. of the loan obtained so that for every \$1,000 received from the government, \$1,250 shall be expended for home construction. The rate of interest on the loans payable by the municipalities shall be five per cent. per annum and no house constructed from the proceeds shall exceed \$2,500. While the intention of the government is to give workingmen and families an opportunity to become owners of their homes, it does not preclude the renting of the houses. If rented the maximum monthly rental shall be \$25.

"We Must Not Slacken Speed"

Just Where National Readjustment will Begin or End is Problematical—How will Crisis be Met?

By E. H. Newton, Vancouver

E. H. Newton, Vancouver, B.C.

In days of yore men were commanded to prophesy concerning things that were to come to pass in order that others might read and understand. We are told the men were inspired, and believing this we are in the present day reading their predictions with clearer understanding than ever before. We are told that these predictions were not ripe and fit for use until the present time, and I find that many thinking men and women are inclined to study them now more than ever before. I am not going to sermonize, neither do I lay claim to inspiration, but I have been asked for an opinion of things and conditions after the war, and if my observations and predictions are worth anything you are welcome to them.

In my contributions to the "Canada Lumberman" in years gone by it was comparatively easy to look into the future and foretell with a reasonable degree of accuracy what was before us.

Today the situation is different, and mighty hard to understand. A few days ago I was on a trip aboard one of our coastwise steamers and as she was gliding along the inland route, quite safe from the storms of the open seas, but taking chances with rocks and narrow passes, she came to a point where she had to navigate a sharp turn in the channel and ugly rocks stood high, not only on both sides, but owing to the turn we seemed to be against them behind and before. It was 2 a.m. and the passengers were in bed. The turn must be made and made quickly. The rudder was thrown right over as far as possible in order to make the turn without lessening the speed. Something gave way with such a noise and jar that we bounded out to see what had happened. The engine reversed full steam astern. The accident was averted by marvellous skill when it looked in the darkness as though you could almost reach out and touch the cliff. When the boat was brought to a standstill it was found that one of the heavy chains on the steering gear was broken. Anchors were dropped and repairs made.

Many Channels Are Not Charted

Today our industry is sailing in more dangerous channels than it ever passed through before. There are rocks on every side, and it looks to me as though some of them are very dangerous. We are entering channels that have not been navigated previously, and are not charted. Will we come out upon smooth waters and go on with full steam ahead, or will we find ourselves piled upon the rocks, is the question which concerns us all.

Just as the ship stopped at anchor and made repairs, so, in my opinion, will we be forced to stop for a readjustment before we reach the smooth water. Just where and when this readjustment will begin or end is problematical, but that it is going to come is certain.

We broke our steering gear some little time ago, and the darkness is upon us. The channel is swift and dangerously rough and the smooth water is not yet in sight.

Today we have but one objective, and that is to beat the detestable Hun at whatever cost. Until this is done we are not going to slacken our speed for anything. If dangers are placed in our way we are going to steer past them if possible, without a break, until our objective has been reached. We will then be ready for a readjustment and the removal of the obstructions which are in the way. This readjustment must reach far and beyond the confines of our industry, and I fear it is going to have a disquieting effect for a time, but as day follows night, so will this time come.

One of the strong arguments of labor is that all the things necessary to our comfort and happiness are the production of labor. Yet in the face of this, labor will insist on shorter hours right at a time when every effort is needed—when a crisis is upon us. Whether wisely or otherwise our government, with the government of the United States, has acquiesced. That this should have been asked, let alone granted at a time like this is beyond my understanding. If all things

necessary to our welfare are produced by labor, then the shorter the hours the less labor we get, just at a time when the country is suffering for labor, and consequently the loss of the necessities of life.

Does Not Favor Shorter Hours Just Now

As shorter hours always demand higher wages we get less and pay more for it. Do not misunderstand me. I believe the workman is worthy of his hire, and I am sorry to say that they are not always treated with the consideration due them, but this is no reason why the country should be held up in a time of crisis and when many of those who benefit are either alien or foreigners. If these can be interpreted as friendly acts it is beyond my understanding.

When we emerge from the darkness through which we are plunging and men get time to consider and reflect—for there is going to be lots of reflection—all our major difficulties will be removed and we will find that as other industries readjust themselves and come back to their level, so will ours. We must be sane—everybody—and use only sane methods. Fools talk of revolution. Sane men talk of reconstruction.

After the war there must of necessity be a great demand for lumber. We have the material and all the facilities, and we are Canadians. We will rise to the occasion and will all be glad to once more sail off upon the untroubled waters of prosperity.

The Wholesaler is Not An Economic Parasite

"It happened that, six or eight weeks ago, I was approached by a group of men who asked whether I would be open to a retainer to protect their interests in matters affecting lumber. I asked them their purposes. They stated that their purposes were as patriotic as those of any group of men in the United States; that all they wanted was to be permitted to have the same degree of sacrifice, the same degree of patriotic effort as other men in the industry were giving to their country, said Jos. E. Davis, counsel for the National Bureau of Lumber Wholesalers, speaking in Chicago recently.

"These men represented a group of wholesale lumber distributors, and the situation as it then existed was briefly this: It was stated that those who were in responsible positions, charged with the execution of some of the plans of the government with reference to lumber, had taken the position that the wholesale lumber distributor was an economic parasite; that the wholesaler had no legitimate function to perform and no legitimate duty; that he was a parasite and that the war was doing a very good thing if it wiped the wholesaler out of existence.

"My friends, that judgment, if it then existed among public officials or certain of them, was an entirely honest judgment, but it was due to lack of information and lack of knowledge; and I am here to say that there is not an economist of repute in this country or any other country, there is not a business man of any intelligence who is familiar with the manner in which industry has been ordered in Great Britain and in France during these trying times but who recognizes that the function of the wholesaler and the function of the retailer, and the function of the manufacturer are equally necessary, and each is performing his service and each should be compensated for the service and the costs incurred in rendering that service.

"And so this organization of wholesalers was perfected, and I think I am safe in saying that within six weeks the purpose and functions, the uses and advantages which the wholesaler renders to society in his legitimate place in the lumber industry have been brought to the attention of the men who are charged with this responsibility in government. I think I may safely add that the attitude of those men has distinctly and decidedly changed. Why? Because they know the facts and because we have been on the job telling them what the facts are.

"It is up to every man engaged in any industry at this time to give such facts as he may have concerning the business in which he is engaged. This is of the greatest importance because either one of two forms of regulation is going to come if this war continues.

"In my judgment, either a regulation that is voluntary and self-imposed, which works through the sympathetic co-operation between government officials and men in the industry, or a regulation that comes by operation of law and regulation, enactment such as we have in fuel and food, and it is my firm judgment and belief, from the experience I have had and the study that I have made, that by far the most effective and the best regulation is the one that comes within the industry itself, that is sympathetic co-operation with the Government, as patriotic citizens, without the coercion of law.

"In my judgment, it is the best form, not only for the successful prosecution of the war now, but it is the best form for the future, because the great problems that we are going to confront within our generation will be questions of whether or not this country and other similar countries of the world are going to be converted into socialism or whether we are going to remain democracies."

Must Have Both Strength and Influence

Many Reforms which the Retail Lumbermen Can Secure
if Properly Banded Together

By A. Ludlam, Leamington, Ont.

A. Ludlam, Leamington, Ont.

I may say that I have been won to feel the need of an organization on the part of the lumbermen, in view of the fact that other trades and unions, etc., are fully organized, the result of this organizing being quite in evidence in many ways.

The local, or county organizations, are very good in their way, but it needs a provincial, or even a Dominion-wide organization to handle satisfactorily questions which would be out of reach of the smaller organizations.

I might refer briefly to a few matters which have come under my observation. As you are well aware, the majority of our legislators are of the professional classes—largely the legal profession—and with all due respect to these gentlemen, I think that it is well-known fact that they are the

least practical of any of our various classes of citizens.

These are the men who are making the laws by which we are governed, and they seem to be imbued with the idea that the manufacturers of the country are in every instance fit subjects for special taxation.

There are a few large concerns, it is true, who have succeeded in building up a large capital, but this does not apply to the whole, nor to the majority of those engaged in manufacture. I might speak of that branch of trade with which I am more familiarly connected, that of retail lumbermen, and planing mills operating a comparatively small plant. These come under the head of manufacturers.

What the Planing Mill Man Has

This is an industry that nearly every small town, and even the villages possess, so that they form quite a numerous class. It requires considerable capital to equip a good planing mill, as the machinery is costly. It is also hazardous, requiring a high rate of insurance; skilled labor is very scarce and high priced, and in order to retain the services of such men, we must of necessity give them practically steady employment.

The field being narrow, makes it necessary that the lumberman must get all the work that is in sight, in his limited field; and should he be unable to make his business pay, and be obliged to suspend operations, it is a well-known fact that his costly machinery, in which he has sunk all his capital, is practically junk, as it is considered of so little value. To prove this, it is only necessary to make an application to any bank or loan company for the loan of capital on the value of the plant, and see what success is met with.

Notwithstanding all these disabilities, we find our municipal assessors asking these planing mills to pay sixty per cent. of a business tax, while the merchant is only assessed thirty-five per cent.

Thinks Act May Become Burden

Next comes the "Workmen's Compensation Act." This law bears strongly on the face of it the imprint of the influence of the labor organizations. I do not wish to be understood as speaking against the workmen having some protection, but the present law is exceedingly drastic in its nature. The workman may be wilfully disobedient—he may receive injury at a machine which he has been forbidden to touch, and which he goes to in total disregard of orders, and yet if he is injured, he is entitled to compensation. There are many ways in which, in the near future, this law will become a burden which will be hard to bear. The machinery working the law is so expensive that the three men comprising the Board are paid salaries aggregating twenty-six thousand dollars a year.

Later legislation has also settled the doctor's costs on the employer, and my experience goes to show that the doctor's bills are nearly equal to the amount received by the workman. The assessments are rapidly increasing, and will continue to increase, until, as I said before, it will be a burden that a great many of the smaller manufacturers will be unable to bear.

With reference to another item, I might mention the Mechanics'

Lien Law, which is practically of no value to the supply man. I have been told by lawyers that there is a value, if we would file our lien immediately after accepting an order, but this, it can be readily understood, would antagonize our customers, and the field being limited, the manufacturer cannot afford to antagonize his would-be customers, as that would simply mean ruination to his business.

There are many questions that could be taken up by a union or society, if it were strong—and we must have strength if we are going to have influence sufficient to accomplish any reforms in the lines which I have mentioned, or along other lines. True, the manufacturers' associations were able to accomplish very little in the framing of the Workmen's Compensation Law, but if they had been backed by a strong lumbermen's organization, some better results might have been obtained.

How Advertising Pays the Yardman

By P. C. Canfield, R. E. Butler Lumber Co., Woodstock, Ont.

"In our lumbering business we do not consider that we are extensive advertisers and feel that in the discussion of this subject we can scarcely do it justice. Whatever advertising we do, however, we endeavor to make it pay and we firmly believe that well displayed, forceful publicity matter brings splendid returns. We used the local papers exclusively in connection with our retail lumber business.

Newspapers and magazines are probably being read more to-day than ever before and in our opinion the advertiser who has an attractive heading will find that his ad. will be read. Any concern who has goods to offer must keep its name before the public.

A man might read your ad. a dozen times, but not being in need of any building material he would not pay any attention to it but, if at any time he has any building to do then he naturally connects your name with that purchase.

We do not, therefore, emphasize what particular lines we have to sell, but we do try to make our ads. attractive so that at a glance a reader can see the heading and also the advertiser's name.

In all our announcements, both large and small, we emphasize strongly quality and service and try to back it up. Just as soon as you fail in keeping up your promises through advertising then your advertising is a failure.

A good many concerns will try and tell you that advertising does not pay, but if you trace it down to the proper source you will probably find that in the majority of cases that they are making the failure of their advertising in place of their making the advertising a success.

In the past we have been doing all our own ad. writing, but we believe that advertising is a business in itself and that concerns who make a specialty of this will give you better results than if you do it yourself. In any event we are trying out a new system and by so doing we are giving more attractiveness to our ads, and also saving space.

In conclusion we can only repeat that effective, properly prepared and instructive advertising conducted on a systematic plan will pay every time, providing the right mediums are used.

Rendering the Best Service Possible

We believe that, for the time being, everyone should investigate every department of his business, from the management to the least important department.

Up-to-date methods of accounting, selling, service, advertising, etc., should be adopted. We think that now is the best time to make such improvements, in order not to suffer too much from the present rather quiet business, in our own line of trade, and more especially to be better prepared to meet the uncertain period that will undoubtedly follow.

Let us look for, find, and follow, the sanest, wisest and most economic way, how to conduct our business and live. We can accomplish this by unity, concord and co-operation.

J. O. Chalifour, Quebec, P.Q.
Secretary Quebec City Retail
Lumber Dealers.

Organize to Perpetuate Forest Revenues

The Preservation of Our Wooded Wealth Before Total Depletion—Process of Tree Selection and Permanent Timber Control

By W. F. V. Atkinson, Sault Ste Marie, Ont., Chief Forester, Spanish River Pulp and Paper Mills

The forests of Canada, from which practically speaking must come our future supply of wood for all purposes, are now suffering serious depletion and are within a measurable period of exhaustion, not only for export but also for home use, unless some efficient laws and regulations be soon put into effect. Indeed, this disaster is possible within the lives of some of our present citizens if the fact is not quickly admitted and sinks in deep enough to produce a definite and consistent organization to prevent it.

I have no doubt that the intelligence of our citizens will insist in efficiency with regard to their forest estate before total depletion takes place, but I wish to bring out the point that every season, almost every day, that passes while present methods prevail means a loss to the country as a whole, and to each citizen respectively. If each citizen to-day could realize how much it actually means to himself and to his family in dollars and cents which he, or they, will have to pay out in taxes for their share of this loss, I am sure that the necessary steps to a remedy would be immediately forthcoming. I wish this was as clear and real to all as it is to those of us who have had the opportunity to see and study conditions and the experience to appreciate them.

We have now a daily increasing national debt. This and the interest on it will have to be met from the produce of the country, and therefore the possibilities of exports from our forest products should be to the general public the most attractive aspect of this subject at the moment, and continue to be so for some years to come. The products of the forests have at times contributed very largely to our exports, deducting war material it is even now large and will after the war become very many times greater as it is clearly one of the things that we can sell that others badly need.

The policy of home manufacture is gaining ground and the result is the creation of immense industries. Formerly the export of forest products included large quantities of hewn timber, this has been largely replaced by sawn and prepared lumber, both for building and for other uses. Home manufacture eliminates some of the waste and enables the country to obtain greater prices for these products by the labor its citizens expend upon them. Pulp and paper have also become a very large part of the forest products exported. These in turn are replacing in so far as the laws permit the export of the rough pulpwood and are also in the line of progress. No other manufacture can show greater results from natural resources in establishing foreign credits than the paper industries have created and maintained for our forests.

The Saving of Ontario Timber.

Great progress in forestry has been made in Canada within the last twenty years. Methods however suitable for one part of the forest are not necessarily suitable to other parts; nor is the best method always understood, and this, I take it, is partly why so many plans are proposed and few adopted. Many betterments have been effected but they have been spasmodic and inconsistent with the forest needs as a whole, satisfying for the time being a demand for the protection of some special class of timber.

Let us take the Province of Ontario for example. This surely is no small problem. What do we know about it? What should be done to save our timber and to perpetuate a crop or supply? What is the annual increment as a whole, and what are the local increment rates of the different present commercial species?

Woods not now generally commercial will become so in the near future. This has already occurred with regard to several species. What quantity of wood can we harvest without depleting our capital stock? What are we doing to protect the future and maturing crop against loss? What are we doing to make the future crop per acre greater than at present? What quantity of the wood crop goes to waste naturally by lack of harvesting? What quantity is destroy-

ed by lack of protection? What quantity is being wasted while our cuttings are being made, and why? What quantity of the immature crop is wastefully cut and brings little value to the operator, and again why?

Why are we doing these things, and do the owners of the estate, the citizens of Ontario really know how one of their principal assets is being looked after? Apparently they are satisfied. Would they be if they understood?

Cut No Wood Unless it is Mature.

The trouble is that there is no one to look after these matters consistently and continuously. If these things were looked after, lumbermen could make better arrangements to cut what should be cut and immense quantities of low grade lumber would be saved if a price was made in each case that would permit them a fair return for their labor; this wood is at present wasted. The people on the other hand would retain for future profit such timber as should not be cut. What should then be done under the circumstances? I maintain that no wood should be cut at all unless it is mature, that is to say, can no longer earn by growth increment sufficient to permit it to remain standing, or is so situated that it is liable to be destroyed before it can be cut down.

The only way this can be done is by selection. This means, speaking broadly, the marking of such trees as may be properly cut, or that must be cut, and the protection of those that must not be cut, and at the same time it entails full inspection and measurement of such trees as are cut. It would no doubt surprise some of our citizens to see 60 per cent of the contents of pine trees felled for lumber, left to rot upon the ground because the quality is not sufficiently good to pay the Crown dues. It would also astonish them to learn that in the so-called pine reserves of the Province, taking the total contents of the stand of timber as a whole, there is no increase or growth increment whatever of the total quality, and that this condition is not the case where stands of timber are properly operated. These details are only an insignificant part of a great number of conditions which exist to the detriment of the forest unknown to the owners which are in the last analysis the citizens of the Province.

With the present system the officers of the Crown are engaged in seeing that contracts and regulations, made largely by their predecessors, are carried out in the best way possible under the circumstances, and they have not either the time, the authority, nor the means at their disposal to carry on or control the exploitation of the people's forest to their greatest benefit. Even if they knew what was the best method, no fault lies with them, it is in the system.

Regulations Based on Continuous Timber Policy.

It is only by continued personal inspection and properly graded instructions and the decision of moot points by a competent staff that the lumbermen can get fair treatment and at the same time be obliged to conform to regulations based on a continuous timber supply. This means a staff of employees not at present contemplated. The required staff should consist under the Provincial Forester, of District Foresters, Assistant Foresters, Forest Examiners, Forest Assessors, and a host of Forest Assistants to be graded and controlled by their respective chiefs and to be subject to promotion as well as to discharge on the recommendation of their superior officers after examination or appeal to a Board appointed by the whole body, and sitting with the Provincial Forester as its head.

Wages and salaries of these men need not cost the Province one extra cent. I am satisfied that sufficient savings could be effected under new stumpage regulations to make the increased revenue such as would amply pay for their services. This body might be called Ontario Provincial Crown Land Foresters, and form a part of the permanent civil service of the Province. They should be a corporate body such as the Ontario Land Surveyors. Graded however, as above indicated and provided with a right of certain grades to vote on well defined subjects, among others that of membership, the object being to establish a strong "esprit de corps" and high ideals which should make any infraction of the rules of the society entail permanent dismissal and loss of all benefits. Pensions should also be arranged for according to grade. Membership to be possible only after a special examination and election to the association. Progress from grade to

grade among the forest assistants to be based on examination and the requirements of the work.

In order to get a start in this organization there are now no doubt a large number of thoroughly competent and reliable men employed as Crown timber agents, Crown scalers, timber cruisers, fire inspectors, timber inspectors, general foreman, and possibly fire wardens. These might pass an examination on physical as well as forest qualifications and be accepted as a nucleus of the association, grading them and advancing them as their qualifications permitted. These grades and occupations to be clearly defined beforehand subject, of course, to changes as time and the organization progressed. The membership would be permanent depending upon the conduct of the individual and the rules laid down among which party politics should forever be eliminated.

How many capable men, after years of forest experience in forest operations have been lost to the benefit of the forest because they felt that it was necessary to provide a home for their old age and an occupation which would carry with it some protection for the future. Alas, how many in order to hold their jobs, temper the log scale and the regulations to their immediate patron, on the pretext that the conditions of the timber sale were too onerous.

Competent Men Should Work Out Details.

This matter is one that needs a long and careful study and should be given to a committee of competent men to work out, including amongst others, under the Provincial Forester, a lawyer, a lumberman, an actuary, and two or three other intelligent men including possibly Crown timber agents, or foresters of training and experience. These men should work out a detailed report covering every phase of the work. The able and efficient methods of the U. S. Forest Service should be closely studied in order to benefit by their experience and to adopt such parts of their organization as might be suitable to our own conditions. A general outline as to wages, organization, pensions, etc., should be laid down and when this is done it will be time enough to define how the revenues may be procured,

W. F. V. Atkinson, Forest Engineer,
Sault Ste. Marie, Ont.

but as promised in this paper, it is not so much a question of low cost of administration as of protecting the provincial forests from final exhaustion and to increase the yield.

The able studies made by Dr. C. D. Howe, Ph.D. on the St. Maurice River district in Quebec, go to show how little is really known about the conditions governing the production of woods at present used in paper making. This refers to one class of wood in a limited locality. What about our white pine and other useful woods? The Trent Watershed Survey in Ontario, the present Crown timber survey in New Brunswick, the able report on Forest Conditions in Nova Scotia, by A. B. Fernow, L.L.D., who says "it appears foolish to administer or prescribe regulations for a property in ignorance of what it is," he recent investigations and regulations with regard to cutting in the Province of Quebec, the work done in British Columbia and on Dominion forest lands, all point to the fact that the time has passed when agreements with lumbermen which fixed their boundaries and bonus and exacted a fixed stumpage rate, leaving practically the rest to take care of itself, is a satisfactory method to the owners of the forests of this country.

Fire protection methods and organizations have made great progress, but this again is only one condition. We know what is done

in Europe and elsewhere. We know that we need to put all our resources in order to see that we may face the serious conditions that are coming and are upon us. Further studies should be carried on in Ontario and work of this kind should become part of the permanent literature of the proposed forest organization. No amount of studies, or plans will ever avail unless there are on hand capable and right men, independent of all outside influences and secure in the knowledge that they cannot suffer in doing their duty, who as the knowledge of the conditions and the requirements become clearer will consistently carry out the plans and instructions laid down by the competent authorities to the benefit of the forest estate, which is in reality a trust in our hands for the benefit of our province or country both now and for all time.

Wood and Wood Products in the Quebec District

Exports to the United States from the Quebec Consular District registered a further advance in 1917. The total value of all commodities shipped was \$22,900,931, as compared with \$16,264,382 in 1916, a gain of 40 per cent.

Wood and wood manufactures in 1917 were 89 per cent. of all shipments and amounted to \$20,399,738, an advance of \$6,244,135 or 44.1 per cent. A survey of quantities handled reveals the fact that betterment in actual trading was only about 13.1 per cent or 31 per cent. below the gain in money values. The following comparative table sets forth the trading for 1916 and 1917 in detail:

Articles.	Unit.	1916		1917	
		Quantities	Values	Quantities	Values
Paper and Mfgs. of:					
Boxboard	lbs.	124,040	2,359		
Printing, news	lbs.	212,851,729	4,391,903	270,337,754	6,493,862
Pulpwood	lbs.	347,563	7,686	234,367	7,466
Wrapping paper	lbs.	2,015,733	84,171	1,872,055	156,424
Wood & Mfgs. of:					
Pulpwood, rough	cords	119,803	709,939	89,867	692,990
Pulpwood, peeled	cords	180,282	1,261,808	247,058	1,988,594
Pulpwood, rossed	cords	59,422	520,085	25,754	206,909
Lumber, rough	M. ft.	80,897	1,482,375	92,523	2,082,792
Lumber, planed	M. ft.	10,814	218,061	10,929	295,199
Laths	M.	37,798	102,225	20,742	75,623
Shingles, other than white pine	M.	1,527	5,511	2,169	6,392
Miscellaneous			12,892		2,572
Woodpulp:					
Mechanically ground	lbs.	162,155,441	1,807,395	197,021,477	3,380,022
Sulphate (unbleached)	lbs.	130,427,966	2,741,230	110,307,510	3,207,491
Sulphite (unbleached)	lbs.	32,120,235	807,963	56,637,164	1,803,409
Total			\$14,155,063		\$20,399,738
Total of all Exports			\$16,264,382		\$22,900,931

An examination of the above statistics shows the most striking advance to have been in news print paper, which added 57,486,025 pounds, or 27 per cent. to quantity and \$2,101,959 or 48 per cent. to value. The increase in wood pulp bulk was not as pronounced as in 1916, amounting to 39,262,509 pounds as against an increase of 83,524,522 pounds in 1916; value statistics are reversed, the advance being \$3,034,327 in 1917, and \$2,314,679 in 1916. The sulphite unbleached variety leads pulp increases with 24,516,929 pounds or 76 per cent.

Increases all Along the Line.

Gains are the rule throughout the table, the most notable exception being wrapping paper, which declined 143,678 pounds, but advanced \$72,253 in value. Pulpboard was also a heavy loser in quantity, being 113,196 pounds below the preceding year, value showing a falling away of but \$220.

Pulpwood results though showing no loss in the aggregate, were well below the levels attained by manufactured products. They show an advance of 3,172 cords, and a money increase of \$396,661. The peeled variety was in most active demand, and the only one to show improvement in either quantity or price. Shipments of peeled increased 37 per cent., while rough declined by 25 per cent. and rossed by 50 per cent.

Eleven thousand, seven hundred and forty-one feet of lumber went to the United States in excess of the quantity shipped in 1916; value was augmented by \$677,555. Practically the entire quantity increase accrued in the rough variety which also accounts for 40 per cent. of the monetary advance.

During the early months of 1917 movement of these products slowed down considerably owing to car shortage and other transport difficulties. But conditions have been ameliorated and with water transport again available recent months have developed an activity which, if continued through the season, will set a new local high record for wood and its manufactures in 1918.

Manufacture of motor trucks for direct and indirect war needs is considered an essential industry, the War Industries Board of Washington announced recently, and priority on material will be granted.

The Market and Uses of Eastern Spruce

Will this Widely Known Canadian Wood be in Time
Diverted Solely to Pulp?

By W. Gerard Power, St. Pacombe, Que., Prés. of C. L. A.

W. G. Power, St. Pacome, Que.

The total lumber sawn in Canada in 1916, according to government statistics, was 3,490,550,000 feet board measure, of which 38 per cent., or 1,340,000,000 feet board measure was spruce and balsam.

Over and above this quantity, last statistics available show that in 1915 about 1,400,000,000 feet board measure of spruce and balsam was converted into pulp and paper, making a grand total of 2,753,330,000 feet board measure. Most of this spruce was cut in the provinces of Quebec and New Brunswick.

These figures will give you some idea of what an important asset of the Dominion are the spruce forests, and how they have helped to increase our industrial growth.

Very great changes have taken

place in the value and uses of spruce in the last fifty years. The early operators in Quebec, and probably all over the Dominion, did not consider a spruce tree of any value, and when logging areas of mixed growth of pine and spruce, they cut out the pine, leaving the spruce standing. While I have no absolute figures as to when the first spruce trees were cut in this province for commercial purposes, from available records I do not believe that any very large quantity of spruce was logged before 1870.

When spruce was first cut for commercial purposes, they simply cut the choicest trees, as only the best lumber could be marketed at that time, but as years went on, logging of spruce increased, as the wood became better known, and white pine got scarcer and higher in price.

Everyone is fully posted as to the changes that have taken place in the last fifteen years, as regards the dimensions of lumber that can be sold today, as compared to fifteen years ago.

This wood is now used in house building, box business and for other purposes too numerous to mention. Everyone, of course, is familiar with the enormous demand for clear spruce for aeroplane construction. The wood cannot be gotten out in sufficient quantities to supply the different governments.

Fifteen or twenty years ago, the bulk of the spruce manufactured in Quebec and New Brunswick was shipped to the United Kingdom, but as time went on, and the quantity cut per annum in New York State and in Maine decreased, a demand came from the United States, which now takes a great deal of the spruce manufacture in the province of Quebec, and a good percentage of that manufactured in New Brunswick.

The first pulp mill to use spruce in Canada was built in 1866. About 1896 the first spruce pulpwood was shipped to United States mills. This business commenced in a very small way, but has now grown very large.

One of the most important changes taking place, and which will affect the future manufacture of spruce trees into lumber, is the ever increasing area of spruce lands, formerly logged for lumber, that are now being taken over by large pulp and paper corporations. This will, to my mind, in time practically eliminate the using of spruce for lumber, and this change will probably come a great deal faster than most people think.

Taking the Risk Out of the Truck Investment

There are some points which it is well to recognize and inquire into thoroughly before purchasing a motor truck. Here are certain facts worthy of consideration which the president of a leading motor car company has handed out. He says that he could not afford to handicap his transportation department with trucks not adaptable to its needs. Neither could he afford to purchase trucks that were backed up by doubtful manufacturing facilities or of unknown reputation. His transportation problems could not be solved by trucks that had not demonstrated their mechanical superiority, as that would invite uncertain deliveries or delayed shipments.

"As a careful buyer, I would look first of all to the ability of the truck to adequately meet my requirements. I know that truck owners who are not behind on deliveries—who do not risk delayed shipments or failure to meet freight and express schedules, apply the same rigid tests in purchasing their transportation equipment that they apply to their production equipment.

"Experience has proven that a truck in order to be operated economically, must fit the purpose for which it is to be used. Any truck will carry goods. The truck that will carry them most efficiently and economically is the one which best fits the purchaser's requirements.

"Is the truck of the right size to accommodate the style of body I need? Is it built heavy and strong enough to stand up under my loads? Will it prove adaptable to the emergencies that occasionally pop up, such as slight overloads, without getting top-heavy? Will it be easy to load and unload?

"These and other points I would carefully investigate and make doubly sure before going any further, because a misfit truck means not only high upkeep, but represents an investment that will prove a liability instead of an asset.

Investigating Reputation and Other Things.

"Once I was satisfied that I had found the right size and style of truck, I would then investigate the reputation of the makers.

"Is it a manufactured or an assembled truck? Who are the manufacturers? What is their record? Are they financially strong and sound? How long have they been going? What is their reputation as engineers and designers? Dependability is the big basic factor to be taken into account in the purchase of a truck and the product selected must be backed by manufacturing experience, integrity and facilities.

"I know that the purchase of a truck is but the beginning of the transaction, for the thing of permanent and paramount moment is to keep that truck running without interruption. That is why the manufacturers should have unlimited manufacturing facilities. Their reputation and prestige must be second to none. They should know conditions under which trucks are used and build accordingly.

Then, again, the prompt supply of duplicate parts in case of need; thorough factory responsibility, and the ability and disposition to co-operate, are insured only where the maker is thoroughly responsible and permanent.

"The primary object of my investing in trucks being to serve more customers or deliver and haul more goods in a shorter space of time, I would next investigate the source of power.

"Is the power plant equal to the power demands I would make on it? This would mean that the motor would have to be built for use on trucks, and one that had been proven in years of service by companies hauling goods of approximately the same weight and description as mine.

"I would make sure of its flexibility in making the short stops and starts of traffic zones, as well as giving a steady uninterrupted flow of power on the long stretches in suburbs and country. I would test it on stiff grades and different types of roads. I would talk with other owners and get their experience of gasoline and oil consumption. As the motor is the heart of the truck, I would thoroughly satisfy myself in every way that my truck would live a long life and not suffer from chronic 'heart failure.'

The Axles, Brakes and Springs.

"My investigation would next be concentrated on the next three truck essentials—axles, brakes and springs. Are the axles of the proven type as to principle of construction? Are they made of the highest quality material to stand the brunt of my loads without giving out? Are they easy to take apart when in need of overhauling?

"Do the brakes possess super-strength with which to hold the load on all grades? Are they quick to act and stop, when in action? Have they the bridge-builder's factor of safety to protect my property and the lives of my drivers?

"The springs must be heavy, but flexible, sturdy and pliant to keep the load away from the frame. This would mean that the steels and other metal components should be selected by skilled metallurgists. Each grade of metal should have been selected for the particular requirements for which they are to be used, chemically analyzed for flaws, heat-treated to give strength, milled and machined for accuracy. I know that chrome vanadium and nickel steels are the most dependable and if possible should be liberally used in all vital parts.

"I would then investigate the width and thickness of the frame to see whether it was of liberal dimensions and constructed to withstand the severe stress and strain of continuous loads. This is the foundation of the truck and the real support of the load.

"Then I would look for such details of refinement as would insure constant service. Among these might be mentioned oiling devices, which should be easily attended to, motor, transmission and axles that are accessible, so that my driver will take pleasure and pride in keeping it in best of order.

Why a Retail Lumber Dealers' Assoc.?

To Eliminate Abuses, Correct Annoyances, and Foster Friendship and Harmony Among Members

By Thomas Patterson, Hamilton, Ont.

Thos. Patterson, Hamilton

We think one of the main benefits to be derived from an association of this kind, from the standpoint of the planing mill man, is an education along the lines of cost production. We are continually asked to quote on new lines of work, some new design in interior trim or in construction of a window or front door, and in many cases there is no precedent as a basis for estimating. How many times after tendering for, say, a nice hardwood stair, with all the panelling, the frequently called for seat and the numerous items which go to complete the job of this kind to satisfy the architect, you find that your estimate which you looked on as being possibly just a little stiff, turns out to be the reverse, and instead of making a profit you find you have a probable loss or possibly

an even break staring you in the face to compensate for the worry and hard work such a job entails. The free discussion of different features which go to make up the cost of these articles, and the experience of members who have been over the jumps, and who are satisfied and are willing to give the others the benefit of their experience, will do much to improve present conditions.

Another feature is the removal of petty jealousies by frequent contact with your competitor. How many times has a friendly discussion of a seemingly aggravating attitude between competitive dealers resulted in a friendly understanding, and the offending party turn out to be altogether a different stripe to what you had him painted.

Grade Standardization is Necessary

Still another object to be attained is the standardizing of grades and manufacture both in the sawmill and planing mill. At present when you buy a stock of lumber from almost any of the leading manufacturers, in order to make an intelligent purchase you must be thoroughly acquainted with their rules for sorting and the character of the logs which they are handling. Each manufacturer is a law unto himself and makes his grades as he thinks will produce the best results from the log he is handling. Not only does he grade to suit himself, but in a great many cases he uses names and terms which he thinks will best promote his own interests. We must admit that this condition is to a large extent the result of the great difference in the product of the white pine log, but we think that we as retailers should have some say in the matter and have some guarantee that when we buy a certain named grade from two separate mills standard recognized rules should apply in both cases.

With regard to the manufacture of the stock in the planing mill there is also much room for improvement. There is no reason why a flooring board or a board of siding should not match with that turned out by another factory. As it is at present if I have a small lot of any of these items left over from a shipment I must be careful and not get it mixed with a shipment from some other source or I will surely be in trouble.

Further Changes in Lien Law

Another source of much trouble and loss to the retailer today is the unsatisfactory condition of the lien law. We have had some amendments to this law already conceded and expect to have further changes enacted that will throw more of the responsibility on the proprietor.

We publish an organ known as the "Monthly Bulletin," which we expect, under the able direction of our secretary, Mr. Boulton, will prove an interesting and instructive adjunct, and hope to furnish practical hints and information through this medium, that will well repay a careful perusal. This, with the training course, will be mailed to the members monthly and the course should fill a long-felt want, particularly amongst our members in the rural districts.

These are just a few of the abuses and annoyances that an association should be able to remedy, and it is with that in view that our association was formed, and we fully expect will more than reimburse the members for any cost which it will entail.

Burning Green Wood Successfully

By Walter Thomas, Nanaimo, B.C.

We have put in full operation at the Van Engineering Works an annealing oven for annealing cast steel castings which burns wood exclusively. This installation is an unqualified success. Slabs are hauled right off the saw of a mill close by. The timber is water-soaked, coming right off the saw in addition to having the natural moisture in it. The oven is eight feet wide, ten feet long and eight feet high, and is easily maintained at a temperature of 1,600 degrees Fah. with one cord of wet wood for ten hours. We can easily give 2,200 degrees Fah. if required. There are other installations in British Columbia in full operation equally efficient and meeting the requirements of the users as to economy and in using wood.

To burn successfully green wood (or even dry wood) it must be recognized that wood (the same as coal) is composed of fixed carbon and volatiles and that to obtain the perfect evolution of the gases from both the fixed carbon and volatiles and assure the perfect combustion of the same, the volatile gases must receive a different treatment to that which the carbon requires. In order to do this something totally different to the ordinary grate surrounded by furnace walls is required. There must be a definite method in the design of the heat generator which must provide means whereby the gases, which are liberated when wood is first subjected to heat, pass through a preparatory process before they are allowed to pass out into the combustion chamber mixed with the gases from the fixed carbon. This has been done in the heat generators installed in B. C., as said before, with unqualified success. Notwithstanding the wood is consumed in the manner described there is nothing complicated in the construction of the heat generator, neither is the generator in any way sluggish in operation. In fact, heat can be generated more rapidly and maintained with greater certainty than is possible by any dried fire system. Having proven the stationary heat generator for burning wood in an eminently satisfactory manner, we are now, at the request of the Forestry Department of the Pacific Coast, arranging to provide a semi-portable heat generator which can be attached to "without the removal of a bolt" standard yarders and roaders in our forests so that the following benefits can at once be secured.

A total abolition of the cause of forest fires from hot carbon being thrown out from hauling engines used in our forests.

The operation of the semi-portable heat generator not being dependent upon the draft created by the exhaust from the engines will maintain the full efficiency and capacity of the boiler under all conditions so that there shall be no interruption in the haul, as is the case when present methods are in use, when on account of the continuous change of draft owing to the variable load on the engine the fuel in the fire box is so disarranged in the endeavor to maintain steam that the boilers die out and the whole hauling operation stops awaiting another supply of steam.

Logging boilers will have a longer life on account of no water dropping on the upper tube ends from condensed exhaust steam, and the lower ends will last longer on account of the fire door not being opened at any time allowing cold air to act upon the highly heated surfaces and tubes.

Where conditions are favorable the exhaust steam not being required for draft purposes it can be utilized to heat the boiler feed water which will also add to the efficiency and capacity of present installations.

Spruce is in great demand on the Pacific Coast for aeroplane purposes and any device which will make for more rapid production and at the same time lessen the forest fire danger will undoubtedly be received with great interest in all the lumber provinces and states on the continent. I am getting out a preliminary design of the semi-portable heat generator and how it will look when attached to the yarder.

Walnut Tree Two Hundred Years Old

"A woman, a dog and a walnut tree—The more you beat 'em the better they'll be," is an old rhyme that has come down from the "good old times." Since the adage is not true of the woman and the dog, it may not be true of the walnut tree, and perhaps the walnut tree that has been cut down in Moss Park, Toronto, because it was "practically dead" has really had a good time. Its age is estimated at 200 years, and that would make it a forty-year-old when General Wolfe stormed the heights of Quebec and regretted that he was not a poet. The timber was sold to B. M. & T. Jenkins, antique dealers, Toronto, for \$10 by the Parks Department. Black walnut is worth \$75 per M log run in the bush and a tree of 12 inch diameter and 12 foot long would produce about 500 feet.

The Gibson Mining Company Ltd., are contemplating the erection of a sawmill at Kalso, B.C. The president and general manager of the company is Mr. D. K. Kay.

T. G. Loggie, Fredericton, N. B.

New Brunswick Taking Stock of Timber

The Most Progressive and Economic Survey Yet Undertaken in the Dominion—New Forest Act is Far Reaching

By T. G. Loggie, Deputy Minister of Lands and Mines, Fredericton, N.B.

I think I am expressing the views of everyone who has studied Forestry problems in this country that the step taken by New Brunswick in the inauguration of the Forest Survey in 1916 has unqualified support. Indeed the making of this survey has been contemplated for some ten years, but on account of the lack of funds the matter was not finally grappled with until an indefatigable and resourceful minister made provision for the expense of this

incurred when forest conditions are changing continually by lands being logged over annually and large areas being laid waste by forest fires?" My answer to this is, conditions like these are noted on the plans when they occur so that up to date information is always to be had in the Forestry Department of the Crown Land Office.

I have said we are carrying on a most comprehensive survey of the Crown Lands, in addition to that we claim the new Forest Act will be far more reaching than anything heretofore attempted in the Dominion in the management of the public domain.

The principal feature is an Advisory Board to aid the Minister in carrying out the new progressive forest policy. The Board consists of five members, as follows:

The Minister of Lands and Mines, the Deputy Minister, the

survey to be paid out of the "Crown Land Sinking Fund," being the result of moneys paid in the way of bonuses from timber licenses during the years 1913 and 1914.

We claim to-day that we are carrying on the most progressive timber and soil survey that has, as yet, been undertaken in Canada, and getting the work done at a much smaller price than was ever anticipated.

Will it surprise the public these war times with the present high prices of supplies when I say that a four per cent survey of New Brunswick is being made for a little over twenty-five dollars per square mile, or four cents per acre? By a four per cent survey it means that for every one hundred acres reported upon the actual trees above 6 inches in diameter on four acres are counted, tabulated as to their size, species and value, as well as making an examination of the soil by digging test pits so that the thickness and value of the soil may be noted.

The survey is carried on by what is known as the strip method by running parallel lines twenty-five chains apart and counting, caliperling and noting every tree beyond six inches in diameter four and one half feet from the ground within thirty-three feet of the line on either side. Burnt lands, barrens, stunted growth, lakes, rivers, roads are also carefully noted so that when a block is thus surveyed the Licensee or the prospective buyer knows the value of the block.

No survey can be of value unless the results are mapped with the information obtained, plainly marked and tabulated. These plans are drawn on the large scale of twenty-five chains to the inch, and prints are always obtainable.

So much for the character of the survey, but what of results? At the 1st of May, 1918, after two years's field work surveys and plans were completed for 1,125,000 acres out of the total quantity of 7,125,000 acres of Crown lands.

The following results have been obtained on the first 800,000 acres examined:

- 77.6 43.3 per cent. area covered with softwood timber.
- 30 per cent. area covered with mixed hard and soft.
- 4.3 per cent. area covered with hardwoods.
- 19. 10.3 per cent burnt land reproducing.
- 8.7 per cent. area burnt land not reproducing.
- 3.4 2.8 per cent area barren, treeless land.
- .3 per cent area lakes and water.
- .3 per cent. area cleared and cultivated.

	Per Cent.
Softwoods.	57.1
White Spruce	9.9
Black and Red	15.8
Fir	15.9
White Pine	3.3
Red Pine004
Cedar	8.4
Hemlock	3.7
Jack Pine14
Hardwoods	42.9
Yellow Birch	18.4
Maple6
Beech	3.3
White Birch	8.9
Poplar	5.4
Other hardwoods9

It may be said by unthinking persons "Why all this expense is

The unnecessary waste in high stumps in cutting trees

Director of Forest Surveys, a representative of the Lessees of Crown Lands, a representative of Private Land Owners.

The Board has held its first meeting and has planned out the work in accordance with the Act. Permanent forest rangers, irrespective of party lines, who have all the qualifications of wood rangers, and after passing a searching examination are to be then chosen. These men will have charge of the fire ranging, scaling, inspecting woods operations, building lookout towers, constructing telephone lines, protection of game and in short, they will be employed throughout the year in everything that pertains to the forest. From present indications it would appear the passing of the new Act is going to be crowned with success and a brighter prospect is in sight as to the care and management of the New Brunswick Crown Lands—its most valuable asset.

Associated Effort Demanded for Retailers

Co-operation and Organization will Produce New Type of Lumber Merchant—Upward Tendencies that will Revolutionize Trade

By Chas. A. Bowen, Secretary National Retail Lumber Dealers' Association

Charles A. Bowen, Detroit, Mich.

It is said that Chinese pay their physician only when they are well and do not pay him when they become ill, or, in other words, he is paid to keep them well and not make them well after they become sick.

What a wonderful thing it would be if we could apply this same principle in a general way to our association work and have all those in the trade we represent members with us and paying us to keep them in a healthy business condition, instead of holding aloof from all organized effort to have this condition ascertain and only come into the organization and pay their money under stress of times or conditions.

The day is long past when any intelligent business man will dare question the necessity for trade organization, and while we are yet

far from the ideal association condition, the trend of the times is rapidly bringing into being the desire among men to be more closely associated. The old order of things is passing away, and CO-OPERATION is now the word instead of competition, as formerly.

To make a success of such co-ordinated effort, however, there must be a reason for its existence. The only incentive for association is the opportunity to do collectively what every individual member seeks to do to further the best interests of his business by furthering that of the industry; to secure economic results of mutual interest through joint activity such as legal, legislative and commercial, rather than through individual or divided effort. The success or failure of any undertaking depends upon the unity and energy of its organization.

Get Together—Forget Selfish Interests

There is nothing mysterious or strange about associated effort; it is an open book; so much so that even "he who runs may read." It merely means that men are able to get together, forget selfish interests, do business with one another and the public "out in the open," and that honesty rules. It means that men now realize that they must "come out of their shell," that they must not be like a turtle, that they must take the broader view or lag behind, and that such activity is an education not obtained in any other school. And likewise, there is no great secret in business. The sooner men forget the old-fashioned notion and thought that they have some peculiar advantage over their competitors, or that they have some sort of a monopoly of brains and recognize that these are only wild imaginings, the sooner will they agree to associated effort, and the sooner will they have the right kind of co-operation that will bring success, the lack of which will bring failure.

George W. Hubbard says, "I suppose after all, the business man, like the rest of us, will develop as the botanist says 'true to type,' the man who cultivates a pleasure in his business, like the man who creates a love for family and home will be ever on the lookout for means of improvement; while the man who only sells goods or service to make a living will view with disdain or resentment, any suggestion that involves more thought and more work."

The conditions of business, the world over, at this particular time demand co-operation in every line, but in no one line of business is it needed more than in the retail lumber business. When the broad scope of the work which should be done by the dealers in lumber, under a properly co-ordinated plan, is contemplated, one is almost staggered with the possibilities and filled with wonder as to why the opportunities have been so long neglected.

The Broadest Vision for Co-operation

In the United States at this time a program is being worked out which needs the largest and broadest vision for co-operation ever attempted by lumber interests. The manufacturers are coming solidly to the assistance of their government and have been of immeasurable value to the government and to themselves because of their associated

efforts; the wholesalers of lumber are amalgamating their interests and are associated together to work out the details for their own protection and are offering their services to the government; and last, but by no means least, the distributors of lumber, the retailers, are making rapid strides toward closer affiliation between the twenty-five to fifty thousand of them in their own interests and also to work with and for the government.

Much attention is being given to taking surveys of handling costs and overhead expenses in connection with the proposed plan of the government of fixing prices all down the line. It has already been definitely settled that the War Industries Board shall fix the price of the major woods—yellow pine and fir—not only from the mill to the government, but to the dealer as well. The next step may be the fixing of the price from the dealer to the consumer, and while it is a complicated matter and can only come after a very careful and elaborate canvass by the authorities, yet the situation justifies a most urgent effort on the part of the retailers to get their cost data in shape to present. This cannot be done individually, and the government does not want to deal with individuals in matters of this kind, but asks that it be handled through national associations representing the different industries, or divisions of industries.

The Need of Proper Cost System

The lack of big broad organization and co-operation among retail lumber dealers is responsible for their great lack of knowledge of this one essential of cost data in their business, as well as of many other fundamental ailments. The same condition exists in Canada. A prominent dealer of one of the principal cities of Canada, in writing along this line recently, says: "The subject of fixing the price of lumber to the trade is very interesting. Now that these steps have been taken I should think it very probable that the price fixing would extend so as to include prices from the retailer to the consumer in the United States. It is also quite probable that the Canadian Government will follow the move made by the United States Government in determining lumber prices. It may be some months before this is done here. The matter has been under consideration for some months in Washington, and no doubt machinery has been organized there to handle it. It will be necessary for the authorities at Ottawa to give the matter a good deal of study before finally determining prices."

"All this brings directly home to those of us engaged in the lumber trade the importance of uniform cost accounting and the necessity of studying and determining costs. The retailers have been very slow in recognizing this. We still have a great many men engaged in the retail lumber trade who are not up-to-date on merchandising and who are quite hazy on accounting. I believe that the definite action taken by the government will put the trade on a better plane of shaking our dealers up and compelling them to study this end of the business."

The Urgency for Constructive Work

This is only one of the many phases where association among retail lumber dealers is a necessity, to say nothing of such need for overcoming the many abuses of the business and the need for constructive work in every department.

The times are changing, however, and while it is difficult to prophesy, we believe we can see an upward tendency which in a few years will revolutionize the trade, and a growing desire to co-operate which will produce a new type of lumber merchant, as much advanced over the present lumber dealer, as the present civilized citizens of America are advanced over the original savage. This will only be brought about, however, by co-operation and organized effort, and by every retail lumberman realizing his responsibility and doing his share of pulling the load. Be like the Chinese in employing their physician; become a unit in the organization which is working for your benefit and pay that organization well to keep you from a sick business condition, and then do your individual part to keep yourself industrially well and all those around you in your same line of business, and the results will be more than satisfactory.

The Eburne Saw Mill, located near Eburne station, was totally destroyed by fire recently. Much valuable machinery was consumed and the loss is estimated at \$75,000, fairly well covered by insurance. The lumber burned was valued at about \$10,000 and was largely for Japanese export. The output of the mill was 60,000 ft. per day and 100 men were employed.

Opening Eastern Market for Western Lumber

How Competition and Distance Have Been Overcome—Possibilities of Panama Canal Route and Establishment of Distributing Centres

By C. J. Brooks, Vancouver Lumber Company, Toronto

C. J. Brooks, Toronto, Ont.

About the same time as the Great War started the lumbermen of British Columbia began a drive on the markets of Eastern Canada. Several years previous to that time the red cedar shingle had made its appearance in Ontario and had gradually won deserved recognition. Douglas fir timbers for heavy construction were also beginning to be well and favorably known; but at the beginning of the war no great quantities of staple B. C. lines were being carried by the dealers of Eastern Canada.

Beginning with 1914 there has each year been a continually increasing quantity of, particularly the better grades of, B. C. fir and cedar moving eastward, more or less speedily—sometimes more, sometimes less—to the markets of Ontario, Quebec and the Maritime

Provinces; and while there is no great secret about the development of this trade, the Annual Number of the "Canada Lumberman" offers a particularly appropriate occasion on which to glance over the situation in general review, noting how things have come about and estimating the probabilities as far as may be.

Economic enthusiasts will remember one of the sage observations of Adam Smith—that "commodities always tend to move from where they are cheap to where they are dear." This statement, which is dignified by the appellation "Economic Law," lies at the root of the matter.

Inauguration of an Active Campaign

In the years of depression immediately preceding the war the demand for B. C. forest products in the great market of the Prairies had fallen off to such an extent that prices become very low, while stocks in the yards of the B. C. manufacturers accumulated to such a degree that these gentlemen began to look longingly towards the industrial markets of Eastern Canada for relief. Accordingly the Forestry Department of the B. C. Government opened an office in Toronto, and the Commissioner initiated an active campaign of educational propaganda among the manufacturers, lumber dealers and architects of Ontario.

Owing largely to the fact that prices of the forest products of Eastern Canada had not suffered proportionate depression with those of the far West, making it possible to deliver the western product on the eastern market at prices comparing favorably with those of local stocks, educational work towards creating a demand was not slow to bear fruit. Almost at once the western salesmen appeared on the scene, local wholesale firms made Coast connections, and the movement of western stocks eastward gathered volume, which has increased from year to year.

The pioneer salesmen from the West did not have a rosy time during the first year of "working out of Toronto." While economic conditions were to a large extent in their favor they were confronted by two great obstacles—competition and distance from the market. Southern yellow pine was coming into the Ontario market quite freely in competition with the lines desired to be introduced—flooring, ceiling, etc., and the Westerners were up against the problem of educating the trade to the superiority of B. C. fir over its widely known and used competitor. Dealers carrying Southern pine in staple lines for the building trades were naturally reluctant to duplicate their stocks in B. C. fir; and Western salesmen had a good many fruitless trips in their endeavor to gain a footing in the new market. Much "preaching of the fir gospel" was done the first year which produced very little in the way of immediate results.

The Growth of National Wood Finish

Persistence in the personal touch by the Western salesmen, however, aided by the educational propaganda of the B. C. Lumber Commissioner at Toronto, soon began to make itself felt. The conditions were particularly favorable. Prices were advancing all around.

Southern pine, owing to transportation difficulties in the United States, was becoming more and more difficult to secure. Clear stocks for interior finish in local lines were practically unobtainable. "Natural wood" finish had grown in popularity and for beauty of grain B. C. fir had and has no equal; so after the somewhat discouraging experience of the first season, when it was a common thing for a salesman to talk half a day in order to persuade his customer to have a few sample lots of lumber included in his car of shingles, a demand began to be felt for B. C. lines which quickly grew to considerable proportions.

The distance obstacle, some 3,000 miles—remains rather a serious one. Yet, as the volume of shipments have increased the transcontinental railways have not been slow to react to the money making possibilities in handling this traffic, and for the past year or more good service has been given except as interrupted by occasional car shortages or other abnormal conditions. It is now quite customary for cars to cross the continent in four to five weeks. This, of course, means practically six weeks to two months from the time a dealer places his order till he receives delivery, and has without doubt been a good deal of a drawback to the possible development of this trade. For during these war times two months may see many changes. It seems clear, however, that if a continually increasing volume of business can be transacted under the uncertain conditions which have existed since the beginning of the war between the western manufacturers and the eastern consumers, a return of normal conditions should greatly augment that volume—other things being equal.

Manufacturing Towns are Good Customers.

The B. C. lumbermen's best market in Eastern Canada has been, up to the present, the manufacturing towns of Western Ontario. Toronto has accordingly been the logical headquarters, and the western selling force has grown from three or four salesmen in 1914 to upwards of a dozen at this time, while several Toronto wholesale firms have also made western connections. Several Montreal wholesalers have also entered the field, and that city absorbs a considerable quantity of B. C. stocks, with a growing demand. B. C. salesmen also report increasing business from points in Quebec other than Montreal, and from the Maritime Provinces.

Up to the present prices have not permitted the introduction by the Eastern Canadian dealers of inferior B. C. grades in competition with local frame material. Lines carried are almost exclusively clear grades of flooring, ceiling, siding and interior finish. Common or sound knotted cedar board have been quite extensively sold in Ontario for barn boards and have given good satisfaction, evidenced by repeat orders; but throughout the Eastern Canadian market as a whole inferior western grades have not as yet been able to compete in price with those of local growth, except in a few instances, as those of cedar barn boards and silo stock.

Practically every lumber dealer in Southern and Western Ontario handles B. C. cedar shingles. These are unquestionably the best shingles produced anywhere. The standard grades XXXXX and XXX are about the easiest thing to dispose of that the western salesman has to offer. There is also a considerable demand for the lower grades "Stars" but these find a readier market in the province of Quebec.

Apart from the retail dealers as a class, perhaps the largest buyers of B. C. stocks in Eastern Canada are the large railway companies. The purchases of these companies run into tens of millions of feet per year, consisting largely of car material and heavy timbers for bridge and trestle work.

Eastern shipbuilding concerns have also been heavy buyers for their special requirements during the past two years, and a further growth of this demand is to be looked for; which demand the B. C. operators by continual additions to their numbers, will be better able to take care of.

Other than industries mentioned there are not as yet many large manufacturing concerns who have gone much beyond the experimental stage with B. C. lumber. Now and then an enterprising concern into whose operations lumber largely enters decides on a trial car; and the B. C. salesmen having made commendable headway with the Eastern lumber dealers have still other fields to conquer, fields too, which present great possibilities.

He would be a courageous individual who would venture to assert

confidently what the future will bring forth in connection with this newly developed trade of the B. C. lumber manufacturer. Price will necessarily remain a controlling factor. It seems probable, also, that when normal shipping conditions return after the war, cargo shipments will be made via the Panama Canal and distributing centres founded at convenient points in Eastern Canada. Southern pine will

undoubtedly, in due course, reappear as a competitor, but in the meantime B. C. fir is becoming more widely known and more widely used every day. And so long as the "ultimate consumer" likes to have his abode finished and his floors laid with lumber that has no knots, with the natural development of Eastern Canada the B. C. manufacturer will find a continually growing demand for his "upper grades."

After-War Problems Lumbermen Must Face

Vital Matters Affecting the Interests of the Industry that Must be Dealt with Efficiently

—Organizing the Forces for the Welfare of All

By H. A. L. Swan, Sec.-Treas. of Ottawa Lumbermen's Credit Bureau

H. A. L. Swan, Ottawa, Ont.

Some folks tell us that successful lumbermen are born—not made. Don't believe it. The so-called "born lumberman" is first of all a mighty shrewd and clever business man; not only a good salesman, but a superior buyer. His shrewdness and success come from living with his business. He eats it, sleeps it, dreams it, studies it twenty-four hours a day, and for a rest, meets his contemporaries in committee to discuss the many questions affecting their mutual welfare, and then he does the thing his best judgment tells him to do.

The man who is not the so-called "born lumberman" either lacks the experience to do the right things, or he doesn't profit by putting into practice what he does know; nor does he discern the wisdom of discussing with his

contemporaries the many problems affecting his business. He lives alone. He is not aggressive. He does not keep abreast with the times. The only lumbermen he knows are those who come to sell him goods.

In the olden times when lumbermen were not numerous, everybody knew everybody, and their interests were more or less interwoven, and as a result of this unconscious co-operation, they all made money, and the business was conducted with a certain degree of pleasure. But what a change in this great industry of late years! The lumber industry has developed to such magnitude and importance as to become one of Canada's greatest national assets; but those great men who have been instrumental in this development have, I feel, lost sight of the fact that through the keenness of competition necessarily arising, the great benefit of co-operation with those in the same lines of trade has been forgotten. There is no firm or individual to blame for this; it is a case of the man becoming so "dog-gone" wrapped up in the business that he has forgotten that there are other poor souls struggling with identically the same problems with which he is wrestling, and the only apparent reason why they have not gotten together is that they have persisted in speaking of each other as "competitors" instead of "contemporaries."

Confronting Questions of Present Day

It must be apparent to all that there are many problems confronting the lumbermen to-day that were not even thought of before August, 1914, and perhaps we could mention "Labor," "Business Tax," "Conscription of Wealth," as some like to term it, as the most important. Then there are "Government Price-fixing," "Export After the War," "Shipping Facilities," "Provisioning the Camps," "Fire Protection," etc., etc. None of these can be dealt with by the individual dealer or operator. So now we are brought to the double task of organizing our forces before we can deal with the vital questions protecting the interests of the trade. This must be done speedily, because, mark you! the world-war will be over suddenly, and soon the great lumber army will be found standing without a general.

With regard to conscription, it is apparent that the term "Conscription of Wealth" is of vague import, because, as used it suggests that it should be resorted to in the same manner as that of obtaining recruits for the army—although there is really no simile. It is not fair to compare the two questions except that when a nation is at war it has a right to confiscate either persons or property for the good of the common cause. That is not disputed, but when a nation wants men for the army there is plainly nothing to do but to take them. But when it wants farm products, machinery, lumber, etc., the case is not

settled by affirming its right to conscript farms, shops and mills, or seize their products. In short, if this were carried out it must be obvious, that there would be no industry from which the nation could derive wealth or taxes. It seems that this argument should be prepared to show that disbursements for wages are far above those of any previous times; the number of workers greater, the time nearly full, and the wages higher. The expenditure of these widely distributed sums creates a vast volume of trade and traffic from which the nation can obtain a greater benefit than by conscription of wealth.

Preparing to Meet the Labor Situation

Regarding the labor problem, this, like all other questions, is one that will require very careful attention at the close of hostilities. It must not be forgotten that the labor leaders of both continents have seized the present tightness of the labor market to prepare for the great influx of labor from Europe. It seems that the lumbermen's associations would be well advised to prepare a schedule of wages, hours of work, now, and be in a position beforehand to meet the situation. What I wish to point out is, that in price-fixing it must be apparent that if an eight-hour day is adopted throughout the country, it must increase the cost of things. Because the same amount of work is not done as in, say, ten hours, the cost of production must necessarily be greater, and will also require a larger staff.

The effect of higher production cost, and higher selling prices is to curtail purchases, and thereby lessen the demand for labor. Under present conditions labor is able to force many concessions which appear to come from the employer, but as a matter of fact they get them because the employer is able to add the cost to the price of the production; but this is merely a war condition, and the problem lies with the education of labor now, so that they will understand the actual situation after the war. They must be shown that the present demand for general commodities is only a temporary creation and must vanish with the signing of peace.

The Careful Scrutiny of all Credits

With respect to credits, it is generally understood that the debtor class will gain, and the credit class will lose by reason of inflation. It is assumed that the debtor class is the poorer class and the credit class is composed of the rich people. It would seem to us that this is not correct, because the owners of property, the employers of labor and operators of business enterprises, should be classed with the debtors, because they do not regulate the prices. On the other hand, I should be inclined to place the laborer with the creditor class, because he does regulate the price of his labor. While the salaried class feel the pinch of high prices now, they will be the first to recover after prices are reduced.

High prices make it all the more necessary to extend greater credit because the retailer must have greater accommodation as prices and supply of credit act and react upon each other. More credit means greater facilities to the public for bidding against itself, so that when the merchant finds that prices are so high that it is necessary for him to find credit accommodation, it is all the more important that he scrutinize carefully all applications which come to him for credits. In other words, he must dispose of his goods in a manner that will give him quick returns in order to retain his credit standing in a crisis.

These are just some of the many problems which the lumbermen will have to contend with, and must be dealt with by the standing committees of an effective association.

A serious fire broke out on the morning of July 23 in a large lumber pile at James River in Antigonish County, N.S. The large piles of lumber were near the railway ready for shipment, and when the blaze was discovered it had made considerable headway. As the fire fighting facilities at James River are limited, calls for assistance were sent to Antigonish and New Glasgow, and men and apparatus were rushed to the scene of the conflagration. The loss was well up in the thousands.

Douglas Fir Used First on Cornwall Canal

Contractor on Lock Gates had to Give Personal Guarantee to Government in Employing it in the Place of White Pine in 1893

By Philip D. Gordon, Mason, Gordon & Co., Montreal

Philip D. Gordon, Montreal

As far as I know, the first mill in British Columbia to introduce their products in this Eastern market was the British Columbia Mills, Timber & Trading Company, of Vancouver, who were not only the pioneers in this market, but also one of the earliest manufacturers on the Pacific Coast.

The first shipments made were in the shape of Douglas fir timber, to be used for the construction of lock gates and dredge anchors. The first timber was ordered by the contracting firm of Messrs. J. & R. Miller, of Ingersoll, Ont., which firm is still doing business under the name of Roger Miller & Sons, Limited, with headquarters in the city of Toronto, Ont.

This timber was used in the building of lock gates on the Cornwall Canal about the year 1893. Mr. Roger Miller has frequently told me of the difficulties he had to overcome in order to get the consent of the government engineers to use Douglas fir in the place of white pine, which wood had been used ever since lock gates were built.

Owing to the size of the gates and the extreme difficulty in procuring white pine, some other wood had to be used as a substitute. Mr. Miller recommended the use of Douglas fir, but had to give the firm's personal guarantee as to its suitability before final consent was given, and it is worthy of note that ever since that time, Douglas fir has been almost wholly used in the building of lock gates; the quantity of oak used getting smaller all the time, and in most instances abandoned altogether.

First Large Cargo Came Around Cape Horn

In the fall of 1893 the British Columbia Mills, Timber & Trading Company loaded a sailing ship with a full cargo of fir timber and lumber, sending her around Cape Horn. The vessel arrived in Montreal in the spring of 1894, and unloaded in the Lachine Canal, the freight paid being about forty-five shillings or \$10.80 per thousand feet. This load was the first large cargo of fir ever brought to Eastern Canada, and it was in fact the only cargo from the Pacific Coast to be brought directly to the St. Lawrence until the spring of 1915, when we brought three large cargoes via the Panama Canal.

During a trip to the East in 1894, Mr. Charles M. Beecher, of the British Columbia Mills, Timber & Trading Company, made the first sale of Douglas fir dredge anchors to the Montreal Harbour Commissioners, the largest being 36 in. by 36 in.—60 feet. These sticks were at that time considered wonders, and when the cars were shipped the timbers carried a very large cotton strip bearing the words—"British Columbia Tooth-Picks"—in large letters. Like lock-gate timbers, Douglas fir has ever since been used for dredge anchors, but the sizes have gradually increased until the Montreal Harbour Commissioners now use them as large as 46 in. x 46 in. x 70 feet, some of which size we have now on order.

Many Prejudices Had to Be Uprooted

My first personal connection with the British Columbia wood products trade was in August, 1895, when I made an arrangement with the British Columbia Mills, Timber & Trading Company, of Vancouver, to sell their products in Eastern Canada on commission. Without a doubt it was very uphill work for a long time, many prejudices having to be overcome, as both white and red pine timber and lumber in Ontario were plentiful and cheap, so that the low prices offered by the British Columbia mills were the strongest inducement we had to offer, as well as being able to supply the larger sized timbers at very low figures.

I find on looking up our records, our first sale was on August 29th, 1895, consisting of 56,000 feet clear B. C. cedar, the first sale of fir tim-

ber was on October 12th, 1895, for 45,068 feet, and the first sale of fir finish was on January 2nd, 1896, for one car of beaded sheathing.

In April, 1896, Mr. Charles M. Beecher again visited the East and spent several weeks going about the country with me talking up B. C. products, which was a very great help, as he was without doubt one of the best posted men in this connection of his day.

In 1895 our sales were 126,000 feet; in 1896, 546,000 feet of timber and ten cars of flooring and finish, and in 1897 the sales increased to 1,088,000 feet of timber, but only six cars of flooring, etc., and so on. We continued our very pleasant relations on a commission basis with the British Columbia Mills, Timber & Trading Company until the fall of 1904, when the demand for timber, particularly, had increased so much that this firm could not undertake to supply our requirements, and we were forced to go into the open market, buying wherever we could, but have ever since retained our friendly relations with the British Columbia Mills, Timber & Trading Company, and still act as their selling agents for fir finish in the province of Quebec and the Maritime Provinces.

The Prices Prevailing in Early Days

It may be of interest in this period of high prices to give some of the figures at which B. C. stocks were sold at in the early days.

Fir timber, 7 x 7 to 12 x 16—27 ft., dressed 4 sides	\$27.00
Fir timber, 10 x 12—39 ft., and 12 x 15—20 ft., dressed	26.50
Fir timber, 14 x 14, x 55 to 60 feet	34.00
Fir timber, 16 x 16, 80 feet	42.00
Fir timber, 36 x 36, 60 feet	46.00
Fir timber, for dredge and scow building, dressed to specification	33.00
Fir flooring, clear edge grain, 1 x 3	25.50
Fir finish, clear edge grain, 1/2 x 3 and 4 in.	18.00
Fir stepping, clear edge grain, 2 x 11 and 12 in.	32.50
Fir, 3 in. clear, in rough	33.00
Cedar, clear, 1 x 8 and up	35.50
XXX cedar shingles	2.40

These prices were all delivered on a Montreal or Ontario rate of freight, which was at that time 60 cents per 100 lbs., and are a few samples only of prices existing in 1896.

The difficulties which had to be met in the earlier stages of the Pacific Coast wood products game were only overcome by constantly keeping the advantages of the woods before the contractors, architects, and engineers, and finally the retail yards, until as time went on they gradually came to see these advantages in their proper light, and the trade has assumed the very large proportions of the present day.

Fine Tribute Paid to Canadian Foresters

Mrs. John Hawkins, of Calumet, Que., has received a letter from her husband, Pte. John Hawkins, of the 55th Company of Canadian Forestry Corps in France, in which is enclosed the text of a letter from Gen. Humbert, commanding the 3rd French army, complimenting the company on its work and excellent results. General Humbert's letter is as follows: "The forestry operations were undertaken by the 55th Company, Canadian Forestry Corps, with the greatest ability, and the results obtained have been remarkable in spite of the difficult conditions under which the operations were performed. The company has given in all circumstances, particularly under enemy fire, a splendid example of courage in the accomplishment of their duties. The general commanding the 3rd French Army expresses his satisfaction to the officers, N.C.O.'s and men of this unit. (Signed) General Humbert."

A report received at Ottawa by J. Ray, Canadian trade commissioner, Manchester, England, says the British Government is propounding a scheme to erect at least 300,000 houses under state and municipal rate aid as soon as conditions are favorable. "This prospective demand for building timber, doors, window, sashes, etc.," says Mr. Ray, "should be closely followed by Canadian manufacturers."

"There are unmistakable signs that after the war timber merchants and builders will turn to Canada for larger supplies of these structural woods than they imported four or five years ago."

General view of lumber mills and yards in Three Rivers District. The large piles and mill in the middle foreground are the property of Mr. J. H. Dansereau, while to the right and separated by the St. Maurice, is a part of the yard of the Wayagamack Pulp & Paper Company. On the extreme left where the St. Maurice joins the St. Lawrence is the mill of the St. Maurice Lumber Company, and on the right the smoke from the mill of the St. Maurice Paper Company can be seen.

Three Rivers is Great Industrial Centre

Logging Operations with the Manufacture of Lumber, Pulp and Paper Have Given Splendid Impetus and Stability to the City—Its Varied Activities

A great part of the industrial prosperity of Three Rivers, P.Q., depends upon the lumbering and pulp and paper industries. The city is fortunately placed at the mouth of the St. Maurice, with its many tributaries, draining an area extending more than 300 miles to the north, and containing immense timber limits, mainly of spruce. The country is essentially a lumbering district, with mills on the St. Maurice from Grand Mere to Three Rivers. The extent of the industry may be gauged by the fact that the members of the St. Maurice Forest Protective Association own 12,577 square miles, ranging from less than a mile to over 3,000 miles, and the description of the mills in this issue will give an idea of the value to the city of the industries referred to.

Three Rivers possesses an excellent harbor, allowing of ocean steamers visiting the port. In pre-war days, large numbers of deals

dripping on the tributaries is done by the men of each company, but from La Tuque down the St. Maurice the work is undertaken by the St. Maurice River Boom & Driving Company, Ltd., which collects the logs for the Three Rivers mills in a boom about a mile above the mouth of the river and sorts them, the logs belonging to each mill being directed into the different booms.

How the Mills are Located.

The cut reproduced gives a good idea of the layout of the principal mills. The plant of the Wayagamack Pulp and Paper Co. Ltd., on Wayagamack Island, is across from the city proper. The principal part of the mill is devoted to the manufacture of kraft paper, but the sawmill and pulpwood cutting-up mill are also extensive. The pulp and paper mills of the St. Maurice Paper Company, Ltd., at Cap. Madeleine, is the newest mill, and is a very substantial building. The company's saw and pulpwood mill is in Three Rivers, and is a large plant. Near the Wayagamack Mill is that of Mr. J. H. Dansereau, and not a great way off is a sawmill owned by the Belgo-Canadian Pulp and Paper Co. Ltd. Occupying a site on Notre Dame Street, Three Rivers, is the sawmill of the St. Maurice Lumber Co. In the pre-war days most of the lumber was exported to the United Kingdom, but with the shortage in bottoms, the bulk of the lumber is being sent across the border. The consumption of pulpwood is very large, and has increased in recent years.

Besides actual manufacturing, Three Rivers does a fair business in lumber. The firm of Alexander Baptist has a planing mill. The name of Baptist is famous in the lumbering history of the St. Maurice, Mr. George Baptist, a pioneer in the industry, having established the first lumber mill in the St. Maurice Valley. The Burrill Lumber Co. owns a sash and door factory, while there are allied branches of lumbering, particularly in the woodworking field, which carry on business in the city.

The St. Maurice Forest Protective Association (which with the Driving and Boom Association is housed in a new building) has its headquarters in Three Rivers. It was a pioneer among such associations, and the methods employed have been adopted by other societies. The work, both of a practical and missionary character, has extended year by year, and it is not too much to say that the protective measures have saved hundreds of thousands of dollars.

Turn Out Sixty-Five Million Feet

The Normal Season's Cut of Lumber of St. Maurice Paper Co. Who Specialize in Many Allied Lines

In recent times the St. Maurice Paper Company has come into public notice by reason of the establishment of a very fine pulp and paper plant of Cap Madeleine, P.Q. But extensive as is this plant, it does not cover the most important part of its operations, from the lumber point of view. The company is an amalgamation of three concerns, the Charlemagne & Lac Ouareau Lumber Co., Ltd., the Gres Falls Company, and the St. Gabriel Lumber Company, Ltd. When the pulp and paper mill was built, the operations were divided into four divisions—the Cap Madeleine, pulp and paper; Charle-

View showing logs entering sawmill of St. Maurice Paper Company, and pulpwood cutting-up mill

were loaded for Europe, and in addition, lumber was sent in bateaux to Montreal for the ocean liners. To-day this lumber is being partly diverted to the United States, and vessels for U. S. ports are loaded at the wharves of the lumber companies. Even prior to the war much lumber was manufactured for the States. The city has also good rail facilities, and in another direction has the advantage of an abundant supply of electric power, the plant of the Shawinigan Water & Power Co., being 21 miles distant.

The logging operations, with the manufacture of lumber, pulp, and paper give employment to thousands of people. Within recent years the erection of pulp and paper mills in the St. Maurice Valley has brought added prosperity to the district, and in particular has favorably affected the City of Three Rivers. That city is just now making great progress, owing in part to the location there of two shipyards and other industries.

Most of the logs are cut for the companies under contract. The

magne, at the mouth of the Assomption River, lumber, pulp wood, planing mill, with clapboard and shingle mill at Montcalm; Three Rivers, at the mouth of the St. Maurice, lumber and pulp wood; St. Gabriel, at St. Gabriel de Brandon, on Lake Maskinonge, lumber and pulp wood. The Union Bag and Paper Corporation, N.Y., hold a controlling interest in the company.

The limits are very extensive, nearly 2,400 square miles, divided as follows: Charlemagne, 588; St. Gabriel, 22; Three Rivers, 1,529. These are scattered along several rivers and their tributaries. The pulpwood is all sent to the pulp and paper mill at Cap Madeleine, that from Three Rivers and St. Gabriel by rail, and that from Charlemagne by tug and barges of 360 to 400 cords capacity. The larger spruce logs and the white pine are manufactured into lumber for the domestic, U. K. and U. S. markets. Nearly all the logs are cut by jobbers, and in an ordinary season the cut is about 65 million feet, employing nearly 2,000 men in the woods. The combined capacity of the lumber mills is 350,000 ft. B.M. per day, and that of the pulpwood cutting up mills 750 cords per day.

The most modern plants are at Cap Madeleine and Three Rivers, the last named having been practically rebuilt three years ago after a fire. The logs for this mill have to be driven from 30 to 200 miles, and this season men were at work on 14 tributaries. The log-driving on the St. Maurice River is done by the St. Maurice River Boom and Driving Co. Ltd. The mill has a capacity of 15 to 18 million feet of lumber and 35,000 to 40,000 cords of pulpwood.

The Sorting Ground of the Logs.

Half a mile just above the mill, the logs of the different companies are sorted. On entering the company's boom, they are elevated into the mill on a log haul-up, and delivered from the deck to either side of the mill. On one side is a log carriage and on the other a twin circular saw slabber. Logs on the former are dealt with by a double-cut band saw, which takes off the slabs and also takes out boards. From this twin circular saw the logs go to a Kendall gang of circular saws. The slabs are re-sawn on a Yates and a Gidding & Lewis horizontal resaws, which cut the lumber five feet and longer, $\frac{5}{8}$ inch and thicker from the slabs. The lumber which requires edging travels to double edgers; the boards from these machines and also those from the band saw and Kendall gang are then transferred to a trimmer, which squares up the ends.

The edgings and what remains from the slabs go to a five saw slasher; a portion of this is sold for firewood, and the rest is conveyed to the burner.

After being trimmed the lumber is graded and piled. The lumber is hauled to the yard by an electric locomotive, over a tramway 700 feet long. The trestle on which the line runs has several branches, 250 feet long, on either side, and the lumber is conveyed from the cars attached to the locomotive to the piles at the various branches by means of rollways. Delivery can be made on to the cars of the locomotive from either side of the sorting tables, by means of the main switch.

As is usual, the filing room is situated above the mill, the machinery being supplied by the Hanchett Swage Works, Big Rapids, Mich. Simonds' Canada saws are used.

On the Way to the Barking Drums.

The logs for the pulpwood cutting up mill are sorted in a gap just above the mill. The log jack has a capacity of 20,000 logs per day. On entering the mill they are dealt with by Ryther and Pringle slashers, the cut logs falling into a conveyor, which travels to the four

barking drums, making $7\frac{1}{2}$ revolutions per minute. The cleaned wood drops out automatically, is caught on a conveyor, and taken to the pile. The wood which has not been thoroughly barked is returned to the drums. The bark is sent to a squeezer to extract the moisture and then burned.

The sawmill is driven by steam and the cutting up mill by electricity. The four boilers for the former are automatically fed by sawdust, which falls from the machines on to a conveyor. In the event of the sawdust coming too freely, it can be shut off by a gate, and sent to the burner. There are two engines for the lumber mill. The current from the pulpwood mill is transformed, in a separate power house, from 2200 to 5600. The engine for the power for running the electric locomotive and for lighting the mill was supplied by E. Leon-

Lower floor cutting up billets at the Canadian Toy Works, Three Rivers, Que.

ard & Sons, London, Ont., and the electrical equipment by the Canadian General Electric Co., Peterborough.

Joe M. Dalton is the manager of the Three Rivers Division, Sam. Hamel, mill superintendent; and H. T. Ham, superintendent of woods operations.

The machinery at the Three Rivers saw and cutting up mills, the pulp and paper mill at Cap Madeleine, and the other plants, was mostly furnished by the Waterous Engine Works, Ltd., Brantford, Ont., and include saw mill machinery made by the William Hamilton Co., Peterborough, Ont.

The wool room at Cap Madeleine is equipped with two Carthage chippers with conveyor feed arrangement, horizontal shaking screens, and long belt conveyors leading to the chip bins in the sulphate and sulphite mills. The sulphate mill, with the recovery and alkali rooms, includes in its equipment Swenson evaporators, melting furnaces, revolving incinerators, disc evaporators, etc., six diffusers and two Continental digesters. The capacity of this mill is 60 tons daily.

Operations in the Pulp Department.

The sulphite mill is equipped with two Manitowac digesters with Jolbert lining and the usual accessories. The acid plant is in a sep-

General glimpse of plant of St. Maurice Paper Company, showing portion of huge pulp pile on the left.

arate building, containing lime and sulphur storage, rotary sulphur burners, coolers and complete barker reclaiming system. The capacity of this mill is also 60 tons daily.

The ground wood mill is entirely electrically driven, the three lines of five grinders each, 15 in all, being each driven by a 1,200 h.p. motor. Six of these grinders were by the Jenckes Machine Co. Ltd., Sherbrooke, and nine by the Waterous Co. The stock is pumped to the screen room, which is fitted with Waterous vertical quiller screens. Excess of ground wood not used in the paper mill is taken off eight wet machines made by the Sherbrooke Machinery Co. and hydraulically pressed. The daily output is 100 tons. The paper mill is equipped with two Pusey & Jones 166 in. paper machines with 60 in. dryers, running at 635 feet, driven from the basement with a drive of the English cotton rope type, each machine being driven with a Terry steam turbine. The capacity is 100 tons daily. The boiler house contains six 500 h.p. B. & W. water tube boilers with superheaters, chain grate stockers, Greene fuel economizers, etc., and overhead storage bunkers of 700 tons capacity.

The head office is at the Board of Trade Building, Montreal, Mr. Alec. MacLaurin being the responsible director in this country.

Wayagamack Mills Are All Modern

They Occupy an Extensive Site on the St. Lawrence and Possess Latest Equipment Extant

The plant of the Wayagamack Pulp and Paper Co., Limited, situated on Wayagamack Island, Three Rivers, Que., is an example of one of the most modern plants in Canada. The chief part of the business is the manufacture of Kraft paper, but the Company also owns a very large saw mill and pulpwood mill, the whole occupying an extensive site on the banks of the St. Maurice River.

The Company's limits, on the St. Maurice River and its tributaries, total over 1,200 square miles, and contain chiefly spruce, with

General view of sawmill of Wagamack Pulp and Paper Co., Three Rivers

some white pine. Logging depots are located at Rat River, Flammand, and on the Croche River, from which centres logging and driving operations are carried on.

After the logs have been driven to the mouth of the St. Maurice River, they are sorted at a gap a short distance above the mill, the small logs going into the pulp mill boom and the large logs into the saw mill boom. The logs in the latter are again divided into spruce and pine booms.

The mills consist of a saw mill and a pulpwood cutting up mill. The buildings are of brick and concrete construction, and are equipped with the finest machinery and appliances.

The saw mill is a very long, wide structure, so planned that the process of manufacture is continuous, and that the logs coming in on the long jack at one end are manufactured and delivered into wagons for shipment or piling at the other. The logs on entering the mill are loaded on to steam feed carriages on each side of the log deck, and are cut by double cut band saws.

The slabs are sent by live rolls to re-cut saws—one at each side of the mill—and from there to double edgers, and by a central conveyor, to the butt saw. The residue goes to the chippers for the pulp mill. The finished boards are sent on another conveyor to the sorting tables, graded as they pass on a chain conveyor, and loaded on to wagons for shipment or piling. Some re-sawing is done by a band re-cut saw placed near the sorting table.

The Shipping Arrangements are Fine.

The sawdust drops from the saws into the basement and is conveyed from there to the boilers. The latter, eight in number, are also fed by the refuse.

The filing room is located in the roof and directly over the saws, and is equipped with several machines supplied by the Waterous Engine Works Co., of Brantford, Ont.

The company has excellent shipping facilities, both by land and water. A wharf which will accommodate several canal boats is situated in the lumber yard. For the purpose of splitting boards for those customers who may desire it after the lumber has been manufactured, a rip-saw is located on the wharf. Any lumber required to be split is taken from the piles, ripped and loaded. A siding from the C.P.Ry. also runs into the yard.

The pulpwood cutting up mill is equipped with three saws, which cut the logs into four lengths of an average of 3½ feet; these fall into a conveyor, which carries them outside of the building to the main conveyor. This main conveyor is a structure 1,200 feet long and is built of steel resting on four solid concrete piers. As the bolts of wood pass up the incline, men divert the wood required for immediate use to the chippers, while that for storage purposes goes on to the wood pile. As the wood is required during the winter, it is returned by means of the main conveyor to a hot pond in the basement of the chipper mill, and from there by another conveyor to the chippers.

The saw mill is driven by steam, and the pulp and paper mills by electricity.

All the machinery, boilers, and engines in the saw mills were supplied by the Waterous Engine Works Co.

The Company has built a number of residences on the Wayagamack Island for the employees. It runs a boarding-house and has also provided a cafeteria at which the employees may obtain meals at reasonable prices. The Company was a leader in the policy now being adopted by many industrial concerns, of constructing good houses which not only helps to retain efficient help, but is of substantial benefit to the men and their families in the way of living accommodation.

Mr. C. R. Whitehead is president of the company, and Mr. Frank I. Ritchie is superintendent of lumber departments.

The Dansereau Mills Are Busy

The Manufacturing, Storing and Shipping Facilities are Most Convenient and Complete

Mr. J. H. Dansereau has for thirty-five years owned lumber mills—for fourteen years at Vercheres, five at Louiseville, and sixteen at Three Rivers. He has also been the owner for ten years of another mill at Pont Rouge, Que.

Mr. Dansereau possesses 32,000 acres of timber limits on the Croche River, a tributary of the St. Maurice River and the quantity

A general view of the huge pulpwood piles of Wayagamack Pulp and Paper Company, at Three Rivers, P.Q.

of lumber on these limits from a valuation made last winter is 34,000,000 feet of lumber.

The capacity of the Three Rivers mill is 12,000,000 to 15,000,000 feet a year. That mill, situated in the city of Three Rivers, is driven by steam. Power is supplied by two engines of 150 h.p. each, located in a fireproof building, and four boilers, of 125 h.p. each, also located in a completely fireproof building supply the steam to those engines. An automatic oiling machine for all the entire mill is situated in the engine room.

Logs are hauled into the mill by two separate log haulers. Sawing is made by one Waterous band saw and one large circular saw, two large carriages with steam feed, also three niggers and two log loaders; three circular re-saws and three double edgers; one trimmer, one slasher, lath mill and furring mill. The lumber, after it is sawn, is loaded on trucks and hauled on two 13 foot-high elevated trussels to the yards, where it is piled.

The shipping facilities are such that six boats can be loaded at the same time at the wharves, situated about 100 feet from the piling yards.

The plant includes blacksmith shop and machine shop. Mr. Herule Dansereau, Jr., is manager of the plant.

Valuable Limits of Pulpwood.

The Pont Rouge mill is situated on the Jacques Cartier River, 6 miles west of Quebec. Mr. Dansereau owns on the river timber limits of an area of 183,360 acres. A valuation of these limits, made by expert foresters, on different occasions, give a total of 2,567,040 cords of pulpwood, all of which is spruce and balsam. The greatest part of this quantity constitute good sawing logs. The limits are only thirty miles from the city of Quebec, which gives great facilities for the hauling of provisions and supplies. The distance for the drive from the nearest limits to the mill is thirty-four miles by the river.

The mill, situated on the Canadian Pacific Railway line, has a capacity of 15,000,000 to 20,000,000 feet of lumber per year, and is driven by water-power supplied by two Samsons water wheels of 500 h.p.; but the power is developed for an additional 4,000 h.p., for which only the water wheels have to be installed. One 125 h.p. boiler supplies the steam for the steam feeds, niggers, log loaders and pickers.

Logs are brought from the Jacques Cartier River into a pond of capacity of 75,000 to 100,000 logs, from which they are hauled into the mill by two separate log haulers.

They are sawn on one side by one band saw, one carriage with steam feed, one steam nigger and log loader; one re-saw, one double edger. On the other side by circular twin saws to slab the logs for the gang, one large 45 inch gang, two circular re-saws, one double edger, one slasher, one trimmer, one lath mill, and also one planing mill.

Lumber is piled on two C.P.R. sidings of about 1 1/2 miles long and loaded direct into the cars from the piles for shipment. A blacksmith shop and a machine shop are also included in the plant.

There are also several houses to lodge and board the men. Mr. Honore Dansereau is manager of the Pont Rouge plant.

The First Mill in the District

St. Maurice Lumber Co. Own Six Plants and Produce Extensively Lumber and Pulpwood

The plant of the St. Maurice Lumber Company on Notre-Dame St., Three Rivers, P. Q., occupies the site of the first mill erected in the district. The original mill was built by an American Company, and the property, after passing through several hands, came into the possession of the present company, in 1891.

The site is an ideal one from the point of shipping facilities; it is on the banks of the St. Maurice and St. Lawrence, and there is sufficient depth of water at the wharves to enable ocean liners to be loaded, while a siding of the C.P.R. runs into a portion of the yard, so that lumber can be loaded direct into the cars.

The company owns six mills, the one referred to, manufacturing lumber and pulpwood; and four rossing plants situated at Batiscan, P. Q., New Glasgow, P. Q., Gaspé Harbor, P. Q., and Connaught station, Ont., on the T. & N. O. Ry., also another rossing plant not in operation, at Pentecost River, P. Q.

The timber limits and fee lands comprising an area of about 500,000 acres are on the St. Maurice, Batiscan, L'Achigan, Pentecost rivers and at Gaspé.

The normal cut for the Three-Rivers plant is 20 to 22 million feet, 15 per cent. of which is white pine and the remainder spruce. It is manufactured for the European, Canadian and U. S. markets. The company does its own driving on the tributaries, but on the St. Maurice the work is done by The St. Maurice River Boom & Driving Company Limited.

The property in Three Rivers covers an area of about 70 acres, the greater portion being taken up with the yards for stocking and

drying lumber. The mill has a capacity of 160,000 feet per day. The logs come down the river, and those for lumber are conveyed to the upper part of the mill by the log jack. They are kicked from the deck on to the log carriage and the slabs are cut by the band saw. The logs then go to a Wicks gang saw, with a capacity for six logs at each operation, and afterwards to the resaws, edgers and trimmers.

There are two single band saws, one Wicks gang, two re-saws, two double edgers, a slasher, and lumber trimmer. The edgings are converted into lath, and the slash and other pieces which cannot be profitably used are conveyed on a chain cable and loaded into carts for firewood. The lumber is sent to the sorting tables, graded, and loaded into trucks for the drying and storage yards. The refuse is conveyed to a burner.

A comparatively small amount of pulpwood is dealt with in a cutting-up mill. The logs are cut into sixteen inches and twenty-four inches lengths, and then conveyed by a cable conveyor direct into boats at the wharves; in the event of no boats being available, the wood is diverted near the wharves to a storage conveyor, and so on to the pile.

The company has large yards, which are divided by means of six main roads and five cross roads, all laid with wood. The roads are wide, with ample space at the various cross sections. Each width and length of lumber is piled into separate piles, each being numbered with a corresponding record in the office.

The plant is driven by steam. The engine house adjoins the main building. The engine is by the John McDougall Caledonian Ironworks, Montreal, and the eight boilers were supplied by the Waterous Engine Works Co., Ltd., Brantford, Ont. The boilers are fed by the sawdust, which is conveyed from the mill direct to the boilers. The gang referred to above is driven by a separate engine, situated in a basement, and made by the William Hamilton Co. Ltd., Peterborough. Practically all the mill machinery is of Waterous make, the gang however, being manufactured by the William Hamilton Co. Ltd.

The filing room is situated above the sawing floor. Saws are supplied by the Simonds Canada Saw Co. Ltd., Henry Disston & Sons, and E. C. Atkins & Co.

How He Has Three Gangs of Men

"How are things going at your mill," inquired one lumberman who has had some bitter experience recently in connection with the help problem, of another, when they met on the train.

"Fine," said Mr. K. "Matters couldn't be better. We have three gangs of men now."

"What?" asked his friend in surprise. "Are you operating your mill the full 24 hours? Have you introduced the eight-hour movement, the same as in the West? You say you have three gangs of men."

"It is just like this," remarked Mr. K— with a sigh: "There is one gang working, one going and one coming. That makes three, don't it? In all my experience in the lumber line—and I have been 27 years at the game—I have never seen help so scarce or so restless as it is at the present time. The number of fellows going and coming for no excuse whatever is alarming. I know of one plant in the north employing less than 70 men and yet during a recent week 22 left and 18 came in. This is typical of a certain class of labor, and its disquietude in many operating centres. Surely the government should step in and control this floating, fleeting element—principally foreign—which appears to want nothing so badly as a "do nothing job" at a to-notch figure—and even then I doubt if many would be satisfied," concluded the speaker.

The James W. Sewall office, of Old Town, Maine, timber estimators and foresters, reports one of the wettest seasons in the woods its men have ever seen. This concern has a crew of cruisers in Western Ontario under Mr. A. C. McPheters, another in the Oenobscot Watershed of Maine under Mr. Frank L. Holmes, one in Washington County, Maine, under Mr. O. W. Madden, and one in the Adirondacks, New York, under Mr. James A. Connors. All alike report continual wet weather, so that the downpour must be well scattered.

An event of unusual interest will take place in Bathurst, N.B., on August 10, when the Bathurst Lumber Company, Limited, will hold its first annual employees' picnic. Arrangements are being made for the entertainment of from 2,500 to 3,000 people, representing the employees of the company and their families. Two bands will be in attendance, and a big programme is being mapped out, so that all will thoroughly enjoy the day without a thought of loss. The Bathurst Lumber Company intends to pay the men's wages just as though they were at work in the mills. Some idea of the magnitude of the undertaking can be gained from the fact that it will mean a loss in production of one hundred tons of pulp at their pulp mill and several times one hundred thousand feet of lumber from the sawmills.

What Association Has Done for Retailers

Some things that have been accomplished, and how the organization has proved of much value to its members, all of whom are willing workers in the cause which they have so much at heart—Provincial convention will be held in Toronto on September 3rd and 4th—Rousing rally is confidently expected on that occasion.

By Horace Boulton, Toronto, Secretary of the Ontario Retail Lumber Dealers' Association

The success of any movement in the nature of a trade association depends, more than anything else, upon the manner in which the members take an interest in its work. This is a trite enough statement, but its bearing upon the progress of any association is so definite that it must be kept in mind. The successful work that has already been done by the various associations that have been organized among the lumbermen in Ontario is a forcible illustration of the fact that the members of an association have, in their own hands, the making or failure of the whole movement.

It would be difficult to name any parallel cases of such definite and valuable work done by associations during the first few months of their existence as has been done by the associations which have their headquarters in Toronto. The cause of their success is found in the fact that every lumberman who has joined has done so not only for the sake of the benefits which he expected to receive, but also because he was convinced that the trade was urgently in need of the co-operation and good fellowship which such associations provide.

One of the most interesting of the associations formed in Ontario during the year is the Ontario Retail Lumber Dealers Association. In some respects it is based upon similar ideas to those of the Wholesale Association, which was organized at the same time, but it has a few distinctive features and special problems of its own, which make it stand out as an association with a peculiar field, requiring, more than most associations, the heartiest possible co-operation and the most aggressive type of development.

The retail lumber dealer, for some strange reason, is one of the most difficult classes of merchants to interest in an association. He thinks his business less adapted to associated effort than any other, and suspects his competitor more vigorously than any other merchant. Why this should be so, is hard to understand, but it is one of the difficulties that have to be met with, and overcome, in the creation of a successful Retail Lumber Dealers Association. This difficulty, however, has a compensating advantage, for such men, when once convinced by results, are the most enthusiastic kind of boosters that any association could desire. This is the situation that is developing in Ontario, and which it is the object of this article to outline.

Had Confidence and Clear Sightedness.

It was hard work to get the dealers in Ontario lined up in sufficient numbers to make it reasonably certain that an association could be formed. The work was done, however, by a few enthusiasts whom the rest of the trade have to thank for their clear-sightedness and their confidence in their fellow dealers. Accepting many risks and shouldering a great amount of work for the good of the cause, these dealers have been working early and late, day in and day out, for nearly two years, and to-day, they can legitimately take credit to themselves for having at last created an association which is producing fine results and has the support of the whole trade. To illustrate the success of the association and its encouraging outlook, it is only necessary to review some of the work that has been done during the first seven months of its existence.

The most interesting fact of all is that an association which had no existence less than a year ago has to-day a membership list which includes over a hundred and thirty of the dealers in Ontario, all of whom are working keenly for the development of the Association. This is a better record than the most sanguine of the early supporters of the Association expected. There are about 450 retail lumber dealers in Ontario who can be considered prospects for membership in the Association. The list of members already secured, therefore, amounts to more than 25 per cent. of the prospects, and includes practically 100 per cent of the larger firms who one would expect to be the easier ones to obtain.

It takes time to work up a membership list in any kind of an association. There are always those who have to be shown that the benefits expected will be secured. It is not at all surprising, therefore, that some of the dealers should have held off for a time. To-day the

Horace Boulton, Toronto

apathy of many members of the trade has been overcome. They know that the association is a valuable aid to them in a great many ways and they are joining in encouraging numbers and making use of the association in many ways.

Much Information of Practical Value.

One of the most successful accomplishments of the association has been the publishing of its Monthly Bulletin. This Association Bulletin has been making its appearance each month since April. It has been a success, both financially and as a means of carrying to the members of the trade much information of practical value to them in the daily transaction of their affairs. Each number of the Bulletin has been larger and more interesting than those which have preceded it, and to-day, after only a few months of existence, it is the equal of any similar association publication in the United States or Canada.

There are so many ways in which an association can be of value to its members that it is difficult to select those which stand out as being of special interest. One of the most important things which the Ontario Retail Lumber Dealers Association is doing is the preparation of a report of the average cost of doing business. This is being completed from reports which members of the association are sending in to the secretary. In making the information public, particular care will be taken to give out only averages of cost, so that the figures submitted by the individual firms will not become public property. The reports which have already been submitted show a most surprising state of affairs. It appears that the cost of doing business varies all the way from about fifteen to forty-five per cent. Such variations cannot be accounted for by differences in the conditions prevailing at different yards. There is one conclusion which cannot be avoided, namely, that some of the dealers have not included, in their estimates of cost, elements which are both considerable and important.

Necessity for Accurate Cost Accounting.

This is one of the ways in which the association will be of inestimable value to its members. Through its Bulletin and in many other ways it is forcing upon the minds of its members the great necessity for accurate cost accounting, as well as the urgency for more modern methods of business than have been in use in many yards. In fact, the situation with many of the dealers in Ontario has made it of the utmost importance that an association should be formed to act as a means of interchange of ideas. Competition and loose business methods had run wild to such an extent that only the vigorous remedies made possible by co-operation could effect a change. It is most remarkable to what an extent this co-operation is already producing results and showing the dealers the way out of many of the troubles which they had formerly believed could not be avoided.

In contrast to the work of an educative nature which the association is carrying on, is the work done as a result of the weight of its influence in the settlement of trade disputes. It would not be wise to report names and facts in detail in this connection, but some of the results can be outlined to show that an association, by means of the combined influence of all its members, can frequently induce firms which are heading straight towards the courts, to become reasonable and agree to a settlement of their disputes.

In this connection, a number of cases have already been submitted to the association, and in nearly all cases the results have been satisfactory to the retailer and the wholesaler or manufacturer alike.

Some Definite Results Recounted.

The first case handled was that of a delayed shipment of a carload of stock which was ordered in the fall of 1916. The retailer had been unable to persuade the wholesaler to ship the car. The wholesaler claimed to have been held up by embargoes to such an extent that shipment had been impossible. A very short time after the matter was placed in the hands of the association, a carload of another class of stock which was acceptable to the retailer was offered, and

the shipment was put through. Both the retailer and the wholesaler were pleased to have the matter cleared up.

Similarly, a carload of shingles which had been on order since January, 1917, was still undelivered when the association was asked to take the matter in hand. This was only a short time ago. An arrangement of the difficulty has been reached. The car is now on its way to the retailer and the secretary of the association has letters from both parties expressing much appreciation of the work the association has done. Everyone is pleased and the cause of difficulty has been removed.

In one way and another the association has also been able to protect many of its members against firms which made a practice of selling to the retailer's customers. Very definite results have been secured in this direction.

One of the members of the association had a claim against a wholesaler for stock which had not been delivered, and which he had been obliged to purchase elsewhere in order to make good with his own customer. Although the association had not a definite hand in the settlement of this case, it is beyond question, according to the statement of the member concerned, that the influence of the association assisted him in securing a settlement. In this case the wholesaler handed over to the retailer a cheque to cover the latter's loss. Had this settlement not been secured the case would have been made the subject of a law suit.

The value of the association's work is not recognized in Ontario alone. Wholesalers in many parts of Canada are lending it their support, in an unostentatious, but none the less effective manner. Salesmen representing most of the large wholesale firms in all parts of Canada are telling of its work when they call upon the trade. Salesmen from the United States, when calling upon Ontario retailers, are doing the same thing and are helping to enlarge the membership list of the Association.

The Desire for Mutual Helpfulness.

The backbone of the association is the desire of each member to do anything he can to help his fellow retailer. The helping hand is extended, not only to members, but to any other dealers who may be in need of it. This is illustrated by the case of a dealer in Buffalo who had ordered stock from an Ontario wholesaler and needed delivery much faster than he was getting it. In fact it looked for a time as though he would not get delivery at all, of the major portion of the order. This Buffalo dealer applied to his local association and they in turn applied to the Ontario Association. The Ontario Association took the matter up with the wholesaler in Toronto and with the manufacturer, who happened to be situated in Michigan. The result is that much of the order has already been shipped and the manufacturer has promised to do everything he can to complete the shipment of the stock at an early date.

These cases are mentioned as examples. They illustrate clearly the fact that the combined influence of an association is far more effective in many cases than that of an individual, however capable a business man he may be. They also illustrate the point that in definite service, on a dollars and cents nature, the association is in a position to make

returns to its members that amount to many times the amount of the fees charged for membership.

Matters of legislation are also engaging the attention of the Ontario Retail Lumber Dealers Association. The chief of these is the consideration of the Mechanic's Lien Act. The Act, in its present form has many objectional and unjust features. A number of amendments were presented by the Retail Lumbermen during the last session of the Legislature, and several of them were passed. The Legislation committee of the association is now preparing a proposed new Act which will be presented at the next session. This Act will be modelled along the lines of the most progressive acts elsewhere in force, and it is believed that there is a fair prospect of having it passed.

Will Hold Big Convention September 3 and 4.

The record which the association has made in the few months of its existence is such an encouraging one that the directors have decided to hold a convention on September 3rd and 4th, at Toronto, in order to demonstrate to the trade that the association is already a success and to show those who have helped to establish it that their work is being appreciated by the rest of the trade. Arrangements have already been made for most of the programme, which make it certain that the convention will be very largely attended and will be of great interest to the trade. There will be business meetings on Tuesday, September 3rd, a dinner on Tuesday evening, as guests of the Toronto wholesalers and retailers, and a day at the Canadian National Exhibition on Wednesday, September 4th.

The visit of the dealers to the Exhibition will be one of the chief events of the convention. The directors of the exhibition have offered the association a number of privileges which will be greatly appreciated by the visitors. All of the members will be admitted to the exhibition free of charge. The officers of the association will be the guests of the exhibition directors at luncheon. A large tent will be provided for the use of the lumbermen exclusively, as a meeting place and a place to rest. In the evening a special section of the grand stand will be allotted to the members of the association where they will be able to witness the entertainment free of charge and in comfort.

Dinner Will be Unique Event.

The dinner which is to be given in the evening, on Tuesday, September 3rd, will be a unique event in the history of the lumber trade in Ontario. It will be the first time that the trade will have had an opportunity to hold such an event. The Lumbermen's Section of the Toronto Board of Trade took the initiative in the matter by inviting the retailers to hold their convention at Toronto so as to afford them an opportunity for entertaining them. The gathering will undoubtedly be the most representative and largest meeting of lumbermen that has ever been held in Canada, and will be a concrete illustration of the progress that has been made by the association movement during the present year. The wholesalers also have made great progress in this direction and the dinner is expected to resolve itself into something in the nature of a great demonstration of good feeling among the various elements of the trade and a striking illustration of the fact that co-operation is feasible not only between individuals but also between associations.

Some Pointers on Workmen's Compensation Act

By Samuel Price, Toronto

Employers and workmen in lumbering and wood working, as in other industries, in the Province of Ontario, have been under a new system of law in respect to accidents, for the past few years. The liability of the employer and the rights of the workmen are upon a very different footing from formerly, and the procedure is also different. Instead of the employer, by whose fault, or imputed fault, a workman is injured, being liable to an action at law for damages, employers are now liable only to assessment for contribution to an accident fund, out of which compensation is paid (with slight exception) for all accidents in the industry. This is in accordance with the modern, and more humanitarian view that industry should contribute to the loss sustained upon workmen by accident in the employment, in the same way as it must bear the loss of broken machinery.

The Compensation Which is Paid.

The substance of the Act briefly is that the workman gets 55 per cent. of his lost earnings, but in death cases the allowance cannot exceed a flat payment of \$20 a month to the widow and \$5 a month to each child under 16, or \$40 to all, the \$5 being increased to

\$10 where there is no widow or where the widow dies. The pension form of payment is used in death and serious disablement cases, as being likely to be more in the interest of the beneficiary. No compensation is paid where the disability lasts less than seven days, and serious and wilful misconduct of the workman forfeits his right to compensation where the disablement is not serious. Otherwise the only condition is that the accident must have arisen out of and in the course of the employment.

Since 1st July, 1917, the workman, whether disabled more or less than seven days, is also entitled, under the Ontario law, to necessary medical and hospital services during the first month's disability.

Some Features of the Law.

The outstanding features of the present Act are its simplicity, speed, and inexpensiveness for all parties. The intricacies and technicalities of the old law and procedure have been banished. Reports from the employer, the workman, and the doctor usually suffice to settle the question of compensation, and cheques go forward to the workman within a few days after these are received. There is no need of legal assistance. Cheques are always made and transmitted direct

to the workman or his dependents. Where in a few cases doubt or difficulty does arise, further inquiry is made, and an officer is sent to investigate where deemed expedient. The employer is now protected from actions for damages so far as accidents to his workmen in their employment are concerned. Neither in England nor in most of the United States does he enjoy the same complete immunity. To the employer court proceedings or the danger of them were always an embarrassment as well as a cause of ill-feeling, and often to an employer an adverse verdict might mean ruin.

The Fears of High Rates.

In addition to knowing beforehand, within reasonable limits, what is going to be his expense for accident protection, the cost of the new system is found to be very much less than was anticipated when the Act was going into force. Many employers viewed it with serious alarm. Few are complaining at the present time, and all appear to recognize the many advantages of the new system. The prophecy that malingering would be rampant and expenditure reckless, and that the burden upon employers would constantly increase, has not been justified. The average rate per \$100 of pay roll under the first table of rates adopted in Ontario for 1915, as estimated, was \$1.64 for all the industries under Schedule 1 of the Act; the average rate for 1915 as finally adjusted was \$1.27; the average rate for 1916 as finally adjusted was \$1.09; and the average preferred rate for 1917, as estimated, is 98 cents. We are providing for our liabilities as they arise; there is no accumulating burden for future years.

Apart from the grants to safety or accident prevention associations, practically all the money contributed by employers goes to the workmen or their dependents as compensation, or is paid for medical aid, the bulk of the expenses of administration being paid by the Province.

Assessments are fixed and levied much in the same way as a municipality fixes and levies its taxes, each class of industry as appearing in the schedule of the Act being in effect a mutual insurance association. The rate, however, is modified to a limited extent by the application of a system of merit rating which is now being adopted, under which employers with a bad accident experience will pay more than those whose accidents experience is good.

Employers are required to make to the Board an annual return of the wages they expend, and any employer commencing an industry covered by Part I of the Act must immediately notify the Board.

Default in report renders the delinquent individually liable, under an amendment known as Section 93a, for payment of any compensation that may be awarded to one of his workmen, in addition to his liability for assessment, and the statutory penalty, which is very severe. This is a protection to other employers against paying for accidents of non-contributors. Section 93a is being consistently applied and the cases of report of accident to workmen of an employer who has not contributed are now exceedingly rare. The non-collections are only a fraction of one per cent. of the total assessments.

Total Accidents and Compensation.

The total number of accidents reported during the year 1917 in all the industries under the jurisdiction of the Board was 36,514. The amount of compensation awarded during the year was \$2,913,085.81. Of the total compensation \$623,556.37 was in Schedule 2 industries, the balance of \$2,289,529.44 being in Schedule 1. The number of accidents reported in all industries during the first half of 1918 was 22,702, being an average of 149 per day; 212 of these were fatal cases. The amount of compensation awarded during the first half of 1918 was \$1,672,362.84, being an average of \$11,002.38 per day. The amount in Schedule 1 industries for the half year was \$1,210,130.02, being an average of \$7,961.38 per day. The amount paid for medical aid during the first half of 1918 was \$183,429.92, or an average of \$1,206.77 per day.

Compensation for temporary disability is usually paid bi-weekly; pensions, monthly. The current benefit list at present averages about 4,500 workmen and dependents receiving compensation, exclusive of workmen who receive medical aid only; and the number of persons receiving compensation during the year is about 28,000, some 10,000 more receiving medical aid only.

During the first year's operation of the Act, 1915, industries generally were inactive. A considerable increase in the total volume of industrial activity occurred in 1916, and a further increase in 1917, the increase being chiefly in industries stimulated by the war, a number of lines of industry, however, falling below the usual average. The same tendency continues in 1918. Broadly speaking, the accident experience of 1916 was the worst of any of the years in proportion to the volume of industry carried on.

Lumbering and Woodworking Figures.

Coming to the lumbering and woodworking industries particularly, it is to be remembered that these are in two classes, lumbering (including logging, river driving, saw mills, etc.) being in Class 1, and

planing mills, sash and door factories, manufacture of mouldings, wooden wares, boxes, etc., being in Class 4. Furniture manufacturing again is in a different class, Class 3. It should be remembered also that purely mercantile business, including lumber dealing carried on by a firm which is not manufacturing, does not come under Part I. of the Act at all, though the employer if he desires may, under a recent amendment, apply to the Board to be covered. Dealing with Class 1 and Class 4, in which the readers of the "Canada Lumberman and Wood Worker" will be chiefly interested, the following figures will be interesting:

	For Year 1917	Class I.	Class 4.
Assessments collected on estimated pay rolls		\$ 155,372.93	\$ 90,091.31
Estimated adjustment		30,875.00	18,925.00
Compensation awarded, including estimates		146,402.53	117,621.25
Paid for Safety Associations		2,719.69	2,942.63
Estimated wage expenditure		12,413,407.22	7,135,896.64
Estimated number of full year workers		15,500	10,000
Total accidents compensated for year 1916		1,003	901
Temporary Disability cases		825	682
Permanent Disability cases		132	215
Death cases		46	4

It will be noted that the experience of Class 4, as compared with Class I has been bad, and it is to be regretted that this experience in Class 4 seems to be continuing during the present year. In Class I the logging experience was especially good.

The Rates of Assessment.

The rates of assessment, since the commencement of the Act, for the chief lines of industry in each of the two classes are as follows:

	1915	1916	1917 Preferred	1918 Provisional
Class I.				
Logging	2.00	1.80	.90	1.20
Saw Mills	1.80	1.50	1.10	1.50
Class 4.				
Planing mills or sash and door factories	1.50	1.80	1.80	2.00
Lumber yards with planing mills	1.50	1.80	1.80	2.00
Lumber yards without manufacturing (added only on application of employer)			1.80	1.40
Manufacture of				
Boxes	1.50	1.80	1.80	2.00
Hardwood flooring	1.20	1.00	1.50	1.60
Vehicle woodwork	1.00	1.00	1.00	1.10
Wooden articles	1.20	1.50	1.50	1.80
Cooperage60	.60	.60	.70

For comparison, the rates prevailing in a number of adjoining and other of the United States, as given in the official Bulletin of December, 1917, published by the Industrial Commission of Ohio, and prepared by their Actuary, Mr. Watson, will be interesting. These, as Mr. Watson states, are the official workmen's compensation rates of the stock companies in the States mentioned other than Ohio, the Ohio law being (in practice) an exclusively state insurance system like that of Ontario. It may be that these rates are sometimes reduced or evaded, or are altered by segregation or shifting of classification, or that in some cases, if the employer obtains permission of the Board, he is able to carry his own insurance, and there are, of course variations in different items, but apparently in no place on the continent with a similar law are rates of assessment upon the whole as low as in Ontario.

Figures that Prevail Elsewhere.

In most places they are vastly higher and in many of the States mentioned the benefits are less than in Ontario.

	Class 1.	Class 4.
	Logging	Saw Planing Wooden Mills. Mills. Mills.
New York	9.14	9.54 3.81 3.32
California	5.97	4.97 3.13 2.72
Illinois	7.45	7.78 3.10 2.70
Wisconsin	4.82	7.62 3.03 2.64
Indiana	7.09	7.40 2.95 2.57
Michigan	6.48	6.77 2.70 2.39
Kentucky	6.19	6.47 2.58 2.25
Colorado	4.80	5.02 2.00 1.74
Pennsylvania	4.35	4.16 1.71 1.45
Ohio (Preferred rate)	2.15	3.85 1.90 .83

Ontario (1918 Provisional Rate)	1.20	1.50 2.00 1.80

Big Impetus Given to Wooden Shipbuilding

How the former flourishing Industry in Maritime Provinces has been revived—Larger crafts are in evidence—Reminiscences of early types of vessels—First wooden ship built by white man was constructed in Nova Scotia—Several counties awakening to the possibilities in store—An abundance of ship timber yet remains.

By Elihu Woodworth, Parrsboro, N.S.

The first wooden vessels built in America by white men were constructed in Nova Scotia, which was then known by another name. This fact is as clearly demonstrated as anything that has been recorded in connection with the early history of this continent, and it cannot be successfully disputed.

Perhaps it is not generally known that to Nova Scotia belongs the honor of originating the first stone or concrete ship. This, however, appears to be the fact, for tradition tells us that Glooscap, the legendary hero or super-man of the Micmacs, had a stone canoe. No details of its construction are given, so we are unable to state whether it was built of reinforced concrete or carved out of the solid rock. We are left in ignorance concerning its dimensions, but it must have been of considerable size, for we are told that Glooscap and his friend went a-fishing in it in Minas Channel and that Glooscap harpooned a whale and "threw it into the canoe." The position held by Glooscap among the Micmac Indians appears to have been similar to that ascribed to Hiawatha in his intercourse with the Ojibways and other northern tribes. Hiawatha, like Glooscap, appears to have had a taste for navigation, for he is credited with being the originator of the birch canoe. His invention at once became popular, and was adopted, with slight distinguishing characteristics, by every tribe in North America, not excepting the Micmacs. Can it be possible that the style of vessel introduced by Glooscap is, after all these years, at last coming into its own?

Barques Built Over 300 Years Ago.

But to return to the building of wooden ships. We are told that Pontgrave built "a barque and a pinnace" in the summer of 1606 at Port Royal, now Annapolis Royal, and that Poutrincourt "also built two barques" at the same place the following year, but after that there is no record of any vessel being built for many years in Nova Scotia. We may assume, however, that vessels were built when needed, but no doubt they were of small dimensions. Unlike the "barques" built by Pontgrave and Poutrincourt for public use and benefit, vessels built in later years were the results of private enterprise. The settler who engaged in shipbuilding did it for his own profit and convenience, just as he might have built a house or a barn. It was an ordinary business undertaking of no special interest to the general public, and no record was kept nor required. During the frequent changes in ownership, which occurred in the early history of Acadie it is probable that little attention was given to shipbuilding, except in cases where vessels were absolutely needed for local use, but when British rule became firmly and permanently established we may assume that a different condition soon developed with regard to building and owning ships. The early settlers were descended from a great maritime people and no doubt some of them were familiar with the building and sailing of ships. The country produced an abundance of excellent timber; the surrounding sea teemed with fish, and trade with neighboring countries could only be carried on by water. Vessels were urgently needed for fishing and for transportation. Can there be any reasonable doubt that, record or no record, the vessels were built and used as required?

The first vessel of which we have any definite information that was built in Nova Scotia after the country had changed its name and allegiance was a 48-ton brig built at Yarmouth in 1787. Several schooners and sloops of less tonnage are said to have been previously built in that country, but no reliable records have been preserved. There seems to be, however, no reason to doubt the accuracy of the statement, for we are told that Jonathan Leavitt built a small schooner named the "Monneguash" at St. John, "before 1770," and that William Davidson, the first British settler on the Miramichi River, built a large schooner there in 1773, and named it the "Miramichi." It is not likely that Yarmouth would be far behind the neighboring province in the shipbuilding industry, and we are told that as soon as a beginning had been made the business expanded rapidly. Brigs of increasing tonnage were turned off, and in 1814 a full-rigged ship of 300 tons was launched. In 1879, ninety-two years after the first brig was launched at Yarmouth, the number of vessels on the Yarmouth registry books was 297, aggregating 153,515 tons. Of course this does not include the vessels that had once been on the books, but had been lost or sold or broken up, but enough remained to give the population of Yarmouth County at that date nearly seven and one-half tons of shipping per

head. Probably that was about high-water mark for Yarmouth shipbuilding, but many fine vessels were built after that date by or for Yarmouth owners, and including at least half a dozen which ranged from 1,150 to 2,154 tons register.

How the Industry Spread Widely.

But Yarmouth was by no means alone in the enjoyment of the benefits of the shipbuilding boom. Her nearest neighbors, the counties of Shelburne and Digby, turned off large fleets of fine vessels, some of the largest of them for Yarmouth owners. Annapolis, the cradle of American shipbuilding, did not forget the art she learned in the early days. Kings County, admirably adapted for shipbuilding purposes, was for many years actively engaged in the industry and turned off scores of fine ships. Cumberland, more than half surrounded by water, built ships in nearly all her numerous coves and inlets. Shipbuilding was a leading industry in Colchester for more than half a century, but, for a time became almost entirely extinct. Pictou was one of the earliest counties to undertake the building of ships, and is credited with launching "the ship Harriet, burden 600 tons, in October, 1798." This, undoubtedly was the largest vessel built in the colony up to that time, and was followed by many noted ships, but of late years her naval architects have devoted their attention to the development of steel shipbuilding. Hants was, for a time at least, the leading shipbuilding county, and still holds the record for the largest ship ever built in the province. Halifax built many vessels of various sizes, but went almost entirely out of the business, and will never again be a great builder of wooden ships. Lunenburg built an immense fleet of vessels, chiefly of moderate size, and the local demand for fishing craft has kept the industry alive when it was practically dead in some of the other counties. Queen's County, now incorporated with Shelburne, contributed her quota during the boom days of the last century, and had not entirely abandoned the industry when the revival came. Vessels were built in the other counties and in Cape Breton, but they were neither very large nor very numerous, and in later years with decreased demand they became an almost negligible quantity.

Strong, Seaworthy and Good Carriers.

It was not to be expected that the ships of the early days would equal in style or finish those built in recent years. The first vessels were strong and seaworthy and good carriers; the rest did not greatly matter. That the vessels were especially strong was due in part at least to the abundance of excellent timber. It was almost as easy to get large timber as small, and, consequently, much larger frames were used in former days than would be thought necessary now in vessels of similar size. In many cases speed was regarded as less of a consideration than carrying capacity, but this was by no means an invariable rule. Many of the first vessels were designed and built by experienced shipmasters who knew what they wanted, and some of them evidently knew how to get it. Speed, as well as other desirable qualities, was soon developed in the provincial shipyards. The "Orquell," one of Pictou's earliest ships, held the record for many years for the fastest passage across the Atlantic. In 1800 the big "Rover," of 100 tons, was fitted out from Queen's County as a privateer to prey on Spanish commerce. The "Rover" had the reputation of being remarkably fast and appears to have deserved it, for she overhauled and captured many prizes along the Spanish Main and sent them into Liverpool. In the war of 1812-14 Liverpool again came into prominence and became a great privateering port. A fleet of small vessels was engaged in the business, and from twenty to thirty prizes might have been seen at one time in Liverpool harbor. But fortune was not all on one side, as with Captain Godfrey and the "Rover," for a good many Nova Scotian vessels became a prey to New England privateers. In this connection it is held that during the war a ship was being built at Partridge Island, on Minas Channel, near what is now Parrsboro. The cry of an American privateer attempted to land near the new vessel, but the shipwrights gave the visitors such a warm reception that they soon changed their minds and retired.

Built, Launched and Took Command.

The first vessels built in this province were built because they were wanted by those who built them. Some, of course, were built for others who contracted for them in advance but none of the builders ever thought of building as a speculation. In many cases when a

vessel was launched the men who built it took command and sailed away without any thought of seeking a purchaser. If, during his voyaging, he found someone ready to give him more for his vessel than it would cost to build another quite as good, he would probably accept the offer and go home and begin to build another and perhaps larger ship. Something like this frequently happened, and as the provincial vessels became more widely known the demand for them rapidly increased. Finally the old shipmasters who had been building vessels for themselves decided that it would pay better to build for others, so they retired permanently from the sea and devoted their whole attention to building ships for sale. Others who had been building vessels for their own use, but did not sail them, kept energetically at work enlarging their own fleets. New shipyards were opened all along the coast by men who wished to share in the prosperity which seemed to attend the pioneer builders. Modern improvements were frequently introduced and much greater attention was given to style and finish. The demand for ships kept pace with the increased supply; freights were fairly remunerative; wages, although ridiculously low in comparison with current rates, were fully as satisfactory as they are at present, money was being acquired with reasonable rapidity and the country generally was prosperous.

Shipbuilding conditions in New Brunswick were, in many respects, very similar. The building of ships was almost coeval with the arrival of the first settlers, and the industry developed with great rapidity. Vessels of various dimensions were built in many parts of the province, and in some places the work soon became an important industry, but the business, even in the early days, showed a disposition to concentration at St. John, and, undoubtedly, more vessels were built at that port than at any other place in the Maritime Provinces. New Brunswick ships in general and particularly the ships of St. John became known the world over, and some of them became

Car loads of rock elm logs for shipbuilding taken out at Marmora, Ont., by Hall Bros., of Toronto

famous. The fastest St. John ship was the "Mares Polo," launched in 1851, and chartered by the Imperial Government to carry passengers from England to Australia. Her first voyage in that employ broke all records; for the trips out and back were each made in less than eighty days—a record that has never been surpassed by a sailing vessel. And yet the "Mares Polo" did not have the monopoly of speed, for there were many fast ships in New Brunswick and Nova Scotia. Among the latter may be mentioned the Halifax barque "Stag," which made the run from Halifax to the Equator in twenty-one days, which is said to be an unbeaten record. A reputation for speed was also acquired by many of the smaller craft such as the profiteers in the early days of last century and later by not a few fishermen and coasters. Some of the smaller vessels built by David Lynch of St. John, gained more than a local reputation for fast sailing, and notable among them was the pilot boat which was named for the builder, Donald McKay of East Boston, the designer and builder of a fleet of the largest and fastest clipper ships that ever sailed salt water, was born in Shelburne county and acquired the art of shipbuilding before he left his native province.

Veteran of Eighty Back at Old Trade.

Many men who were noted for the excellence of the vessels designed and built by them during the palmy period of the industry have been removed from the stage, but a few were left to resume the work when the revival began. One veteran, eighty years old, who has 143 ships to his credit, is now building a fine vessel on Prince Edward Island, and is not likely to stop at that. The fact is that wooden shipbuilding came very near to being a lost art, and that, combined

with the urgent demand for young men elsewhere, has caused our shipyards to be manned by an unusually large proportion of men past middle age.

Wooden shipbuilding probably reached its greatest expansion in these provinces about thirty years ago. But even before that time, strange as it may appear, provincial shipowners had adopted a policy that was destined to greatly injure their own business. Actuated by a commendable desire to keep their fleets up to a high standard of efficiency, they decided to sell their old ships whenever they required reclassing and replace them by building new and perhaps larger vessels. To carry out their design they were willing to accept very low prices for their old vessels, but even when great reductions had been made it was found that the Scandinavians were the only people who were willing to invest in vessels of that character. The result was that a large number of the old provincial ships fell into the hands of the Norwegians, who, except for putting a windmill on each vessel to do the pumping, spent very little money for repairs. Having thus secured a fleet at ridiculously low figures, and being able to sail their vessels with wonderful economy, they were in a position to compete for the carrying trade on terms which could not be profitably met by the owners of good ships. As a natural consequence freights declined and the demand for new ships decreased. Then came the big tramp steamers with their enormous carrying capacity and their greater dispatch, while freights dropped still lower and the demand for ships entirely ceased. Shipyards were closed all over the country, while shipwrights, sailmakers, riggers and other associated trades were forced to seek employment elsewhere. A few fishing vessels were still built along the coast, as required; a builder here and there turned off an occasional coaster, while one yard in Cumberland county built at least one vessel every year, but wooden shipbuilding, so far as the country was concerned, was dead, as many believed, beyond any hope of recovery. Wooden ships became poor property and their owners disposed of them as quickly as possible, and often at unremunerative prices. In the first years of this century shipbuilding in the sea provinces was little more than a memory.

Few Men Saw Vision of Revival.

Then came the revival. Sales, wrecks and inevitable decay had greatly reduced the number of home ships and had increased prices in the home market. Half a dozen years ago a few vessel men had vision enough to perceive that there were not sufficient ships left to fill the local requirements. Accordingly they built vessels for their own use and were so successful that others who had been somewhat doubtful were induced to follow their example. Then the great war began. The demand for vessels became imperative, but at first the effect upon wooden shipbuilding was scarcely appreciable. A few extra keels were laid, but every such venture was regarded as a doubtful proposition. What was the use of building a lot of vessels if the war would be ended before they were finished? If the shipbuilders had dreamed that the war would continue until now and be greater than ever, with the end not even in sight, there is no doubt that many shipyards would have been opened in 1915. But it was not to be. Few men were given Kitchener's vision, and the almost universal belief was that the war would soon end. Shrewd business men were unable to see any money in ships, and refused to enter the building game. After more than a year of war some began to see the light, but the start they made then showed very few results until the following year. Even after a second year of slaughter and destruction the results of the revival were less apparent than might have been anticipated, and it was not until last year that the movement began to be general. And even then by far the greatest results were seen in the counties where shipbuilding had never entirely ceased. Lunenburg, for instance, turned off a fleet of 38 vessels. It is true that eleven of them were gasoline motor boats, ranging from ten to forty tons, but the other 27 registered from 87 tons to 345 tons, and averaged about 150 tons each. Queen's, Shelburne, Yarmouth, Digby and Annapolis each built fewer vessels than Lunenburg, but nearly all of them were of greater tonnage. Cumberland turned off nineteen schooners, the smallest of which registered 357 tons, while the largest measured 475 tons. The nine vessels averaged 426 tons each, and this combined tonnage was greater than the output of any other county except Lunenburg.

Many Contracts are Being Carried Out.

The number of vessels under contract, or in course of construction at the beginning of the present year was greater than at any time in 1917, and many additions have been made since Digby led with twenty-one ton schooners, one big four-master and a steamer. Some of them have already been launched, but more have been added, and the number larger than ever. In June twenty-four vessels were being built along St. Mary's Bay within a distance of twenty miles. One vessel launched in the county this summer registered 1,100 tons—the largest that has been built in the Province since the revival began. Cumberland began the year with eighteen schooners and three

four-masters, but several more were soon added. Cumberland shipbuilding in late years has been confined to the Parrsboro Shore, but now vessels are being built on Chignecto Bay and on Northumberland Strait, while shipyards that have been silent for thirty years, are again ringing to the sound of the axe and mallet. Hants is just getting into her stride, but she will have to move much faster to reach the gait she struck more than forty years ago. Her contribution last year was a tern schooner of 394 tons, another of 371 tons, and a two-master of 67 tons. This year she started with five vessels of much greater dimensions, and will probably add to the number before the year is ended. Some counties appear to be just awaking and seem scarcely to realize that there is a revival. These may come into the game later, but some of them appear to have a preference for steel ships. This can scarcely be on account of lack of material, for there is said to be an abundance of ship-timber still remaining, but in many cases builders will have to go farther afield for their stock and there is undoubtedly a big advance in price.

The revival in New Brunswick has scarcely paralleled the move-

ment in Nova Scotia. It was later in starting and its development has been less rapid. But many fine vessels have been built in various parts of the province; more are being built, and there are indications of increasing activity. St. John, which was undoubtedly the leading shipbuilding port of the province in the last century, was extremely deliberate about resuming the industry. The thousand-ton schooner which was launched there last June, was said to be the first vessel built at that port in twenty years.

Larger vessels are being built every year, as is always the case during a building boom, for shipbuilders always seem to be determined to surpass their own greatest efforts, but there has been practically no change in rig. Two, three, and four-masted schooners are the accepted rig, and the day of the big, square-rigger seems to be done. In the case of auxiliary schooners it appears to be the fashion 250 tons, recently launched at Shelburne, and another of the same to dispense with topmasts, but otherwise the rig is unchanged. The only exceptions to the rule that have been noted are a brigantine of size now being built at Cardigan, Prince Edward Island.

B. C. Making Record in Building Wooden Ships

Since the Shipbuilding number of the "Canada Lumberman" was published in October, 1917, a great deal has been done in the shipbuilding industry at the Pacific Coast. Though hampered to a certain extent by the unrestful attitude of labor, many ships of different types have been launched, and some of them are on the high seas in all parts of the world, carrying cargoes of British Columbia products, chiefly lumber, as they depart on their maiden voyages. Since this time last year the shipbuilding industry has grown into one of the largest in the province. These yards are almost within the shadow of the mighty forests from which the huge timbers are taken and there is no doubt that British Columbia is going to make a record in the matter of wooden shipbuilding within the next few years, providing the different labor organizations do not make demands which will make the thing impossible. There are to-day eight shipyards at the Pacific Coast, six building wooden ships and two building steel steamers. Of these four are located at Vancouver, being the Western Canada Shipyards, Ltd., William Lyall Shipbuilding Co. Ltd., Wallace Shipyards, Ltd., and J. Coughlin and Sons' Shipbuilding Co., Ltd., the former two constructing wooden ships and the latter steel.

The Lyall Shipyard's program for 1918 consisted of six wooden steamers of 2,500 tons. Five of these have already been launched, as follows: War Puget, February 10; War Cariboo, April 17; War Cayuse May 7, War Atlin, May 27, and War Nicola, June 24. The other steamer, named the War Suquash, is on the stocks and is almost ready for launching.

The Western Canada Shipyards were successful in securing contracts for the construction of six steamers, to be of 2,800 tons. Of these the War Nootka was launched January 14; War Selkirk, March 6; War Tatla, May 23; and War Casco, July 4. The other two—War Chilkat and War Tanoo—are expected to be launched within a short time.

The other shipyards are the Pacific Coast Construction Co., Ltd., located at Port Coquitlam; New Westminster Construction & Engineering Co., Ltd., at Poplar Island, in the Fraser River at New Westminster; The Foundation Company of British Columbia, Ltd., Victoria, and The Cameron-Genoa Shipyards, Ltd., also at Victoria. It will be seen that the real heart of the industry is at Vancouver.

The Pacific Coast Construction Co. at Port Coquitlam have launched two steamers—the War Tyee, early in the spring, and the War Sumas, July 12. This firm also has a third hull on the way, which is being planked, and is making preparations for the laying of the keel for hull No. 4.

The New Westminster Construction Co., Ltd., at their Poplar Island yards have launched the War Comox, April 11, and the War Edensaw, June 8th. They have two vessels on the ways, just about ready to be launched, but are being delayed owing to the non-arrival of boilers, engines and rudder posts.

The Cameron-Genoa Yards at Victoria have been busy up until this year, building ships for the Canada West Coast Navigation Company of the auxiliary schooner type, the first of which—the Mable Brown—was launched, January 27, 1917. This year they have launched the War Yukon and War Haida, June 12, and have one more on the stocks which will soon be ready for launching.

The Foundation Company of B. C. Ltd., at Victoria, have launched the War Songhee, December 27, 1917; War Masset, April 18,

1918; and War Babine, June 15. Their fourth hull, named the War Camchin, is ready for launching, having also been delayed awaiting the delivery of her rudder. The War Nanoose, their fifth hull, is just about 95 per cent. complete and is awaiting her machinery.

All of the above-named steamers were built or are building under contract to the Imperial Munitions Board for the British Admiralty.

Contract Awarded for Twenty-four Ships.

Owing to the fact that many of the ships have unnecessarily been delayed owing to labor troubles, it has been reported that the British Admiralty is not going to let any further contracts for wooden steamers in British Columbia. This however, has not been confirmed, but the fact remains that some of the yards are on their last ship and some of them have ways remaining idle for the want of further contracts. It has, however, been made public that a contract for the construction of twenty-four wooden steamers has just been placed by Montreal interests with the Lyall Shipbuilding Co. This order arrived in the nick of time for the large staff of workmen who had about finished the last of the company's contract for six steamers. The new vessels will be of 3,500 tons' capacity, which represents a substantial increase in tonnage over the 2,800 ton type called for in the previous contract. It is understood that the Lyall Company is going to double its yard space and to establish six additional ways, making twelve in all. The building of these steamers will call for about 25,000,000 feet of timber and lumber, which is now being arranged for at the mills. The five other yards are still unprovided with new contracts, but there is a confident feeling that in the near future this will be remedied and that a still larger force of workmen will be needed to execute the orders expected to be placed.

Increased Output of Industrial Plants.

The shipbuilding industry has increased the number of employees of British Columbia industrial plants by approximately 25 per cent., while the output of products will be increased by a round 50 per cent. This means that the industrial output for the province, including ships, will, for 1918, be something over \$125,000,000, as compared with \$72,000,000 in 1915. The number of employees in all plants this year is between 40,000 and 45,000, and the payroll is between \$20,000,000 and \$25,000,000, as compared with \$15,000,000 in 1915. In 1900 the total industrial output of British Columbia was less than \$20,000,000, and the number of industrial employees 12,000 approximately. There are almost as many employees in the shipbuilding interests alone now as there were in the entire province in 1900. The capital invested in British Columbia has jumped from \$22,000,000 invested in manufacturing plants in 1900 to around \$200,000,000 in 1918, at least \$50,000,000 of the latter being due to the various shipbuilding industries and allied industries.

Roe & Abernethy, Hudson St., Marpole, Pt. Gray, Vancouver, B.C., recently lost their sawmill at Eburne, B.C., by fire. The loss is estimated at \$65,000, and the company intend to rebuild at once at a cost of \$70,000.

A big forest fire recently raged in the Wolfsohn Bay district, near Powell River and destroyed one of the camps and considerable of the outfit of Bloedel, Welsh and Stewart, one of the large operators in that territory. The damage to the property of this company alone will, it is stated, amount to over \$50,000.

Taking Out Rock Elm in Ontario for Ship Timber

Hall Bros. of Toronto Specialize in Round and Hewn Stock for Wooden Vessels— All Sales on Cubic Foot Basis—The Sources of Supply Few

The building of wooden ships in Canada is rapidly developing into an outstanding branch of our national undertakings. During the past few weeks not a few vessels have been launched which constitute important contributions to the Merchant Marine of the Dominion. The furnishing of the necessary timber is an important adjunct in connection with shipbuilding. One of the firms which have been specializing for some years in this sphere of activity are Hall Bros. Ltd., 174 Mutual St., Toronto. Last year they took out some 2,500 sticks of rock elm, both square and round, or about 75 carloads, and so far this season their business is over double that of 1917. Before the war Hall Bros. Ltd., shipped direct to the Old Country, but since 1914 all export business has been done through Canadian concerns which maintain offices and permanent organization in Great Britain.

"Yes," remarked Mr. S. E. Hall, president of the firm, "we believe that rock elm is the most suitable timber for shipbuilding, whether used above or under water. It is very strong, clear and durable. It is also straight grained and will last practically an indefinite period. Besides that, it will bend and possesses other advantages which we maintain are not equalled by any other kind of wood."

Length and Dimensions of Stock.

Rock elm generally grows in clutches of from 25 to 100 trees, and is found in certain sections throughout Eastern and Western Ontario. Hall Bros. buy up all the rock elm possible from the farmers and sell the timber direct to the trade. It is used for garbage stringers and planking in shipbuilding and is from 12 to 55 feet long; varying in sizes from 9 x 10 up to 20 x 24 inches. The average length, however, is about 30 feet, and the average dimension, 12 x 14 inches. Most of the timber that is exported is hewn, the scoring axe being first used and the finishing work done with the broad axe. There are four men in a gang and not more than 100 cubic feet is squared per day. Canadian shipbuilders prefer to buy in the round and have their own saws which rip the wood to the proportions required. Most of the rock elm and also a smaller quantity of gray elm which is handled by the firm, are bought from the farmers on a board measure basis, which is best understood by the owners, but all sales transactions are conducted on a cubic foot basis. The value of the timber is based on the average cut per stick. The difference in price between square and round timber is about 25c per cubic foot, but in the end the dressed article is possibly the most economical, owing to the saving in freight rates.

In the accompanying illustrations there are seen shipments of round rock elm logs taken out at Marmora, Ont., and also a consignment of square timber secured at Marlbank, Ont. Some of the sticks are so long that it requires two cars to carry them.

In addition to specializing in ship timbers Hall Bros. carry on an extensive business in all kinds of hardwood lumber, and deal with large consumers and wholesalers. They have built up an extensive connection and last winter operated four camps in Hastings County. While the firm do not own any mills still they furnish stock for same in the interest of their customers. Hall Bros. Ltd., were incorporated in January last under a Dominion charter, the capital stock being \$100,000. S. E. Hall is president and manager of the company, J. M. Hall, first vice-president, and T. G. Hall second vice-president. The latter looks after the shipping and getting out of the timber, while S. E. and J. M. Hall attend to the buying and selling and inspecting.

Hewn rock elm timber for shipbuilding cut at Marlbank, Ont.

The brothers come of a lumbering stock, their father, Samuel Hall, being engaged in the sawmill and timber business all his life. He passed away at Tara, Ont., last year. In his younger days he carried on a square timber business through the white oak regions of the south, and later operated a mill at Marmion in Grey County, and then removed to Keady. Timber of all kinds was sawn and the sons are thoroughly practical from the logging camp to the marketing of the finished product.

After leaving home in October, 1905, S. E. Hall was engaged for nearly three years with the Bradley Lumber Company, Hamilton, Ont., inspecting and selling. This organization handles ship timbers and it was there S. E. Hall got his initial acquaintance with the wood required for nautical purposes. Ten years ago he came to Toronto

S. E. Hall, Toronto

T. G. Hall, Toronto

J. M. Hall, Toronto

and launched out for himself. He was soon joined by J. M. Hall, and more recently T. G. Hall was also taken into partnership, the firm becoming "Hall Bros. Ltd." Nearly one half of their business is done in supplying ship timbers, and if the present development in wooden shipbuilding continues, their association with this branch of the timber trade will become increasingly important.

"Yes," concluded Mr. S. E. Hall, "it is unusual to find timber squared to-day with the broad axe, but such operations are carried on by us wherever possible. The head of our gang of hewers is a man

who has had over thirty years' experience and can hew timber until it is almost as level as a billiard table. Such work is becoming practically a lost art, but as already stated, Old Country firms prefer that ship timber should be hewn, while in Canada most of the shipbuilding concerns have their own cutting plants. They take the timber and rip it up to whatever size is required. We buy rock elm wherever it is possible to locate it, and we could greatly extend our operations if the sources of supply were larger and not so widely scattered."

Lumbering Operations in Bruce Peninsula

By W. J. VanDusen

The Bruce Peninsula, in the province of Ontario, was at one time covered with a luxuriant forest composed of white and red pine, hemlock, maple, beech, birch and ash. Lumbering has gone on almost continuously from 40 to 50 years. In this time vast quantities have been removed, but a worthy rival to the lumberman in the destruction of these forests was the fire which, when started in the coniferous forest would burn until the material gave out.

In the early days white and red pine alone were valuable enough to be taken out. A little later hemlock was added until at present very little but hardwood is left. For this reason the fire danger has been decreased year by year. But never in the history of the region, as far as could be learned, was there any attempt at protection. The lumbermen of to-day in this section maintain that if a fire should start, it would stay on the ground and do no damage.

A ground fire will run through a stand logged 10 or 12 years ago, but will not get further than one or two hundred feet into the virgin forest. These fires do not damage the standing timber, but do destroy, or at least, damage any volunteer growth which happens to be in its path. Then, again, these ground fires are injurious to the soil which covers the rock very thinly in places. Various estimates have been placed on the annual cut of the Peninsula, but they vary within wide limits. Most agree, however, that if the present cut is maintained there will be very little left on the Peninsula in ten years.

The forest in the Bruce Peninsula consists entirely of hardwoods, principally maple and beech. Part of the tract has been logged 12 years ago, and on this section the average stand per acre was about 4,000 with a maximum of 6,000. On the virgin portion, however, the average would be about 8,000 with a maximum of 10,000 or 11,000. Of this stumpage 60 per cent is maple, 30 per cent beech and the remaining 10 per cent is made up of other hardwoods, principally of basswood, elm, birch and ash. The entire cut is sawn timber and is very sound. The trees in the more open stand are more branched, hence reducing the merchantable length. Taken as a whole the timber is fairly straight with medium taper. Eighteen logs are counted a thousand board feet, therefore the average log would contain about 55 board feet.

As a general rule there is a plentiful supply of snow; in fact at times, there is an over supply, which hampers the cutting and skidding. It has been estimated that an ordinary depth of snow (1-1/2 ft. 2 in.) increases the cost of cutting about 10 cents per M., and that of skidding about 25c per M. Then again when the snow is deep certain winds give considerable trouble on the hauling road by drifting at the edge of the bush. The hauling commences just as soon as the road can be put in shape, for the weather is not stable enough to be careless of good hauling weather.

Location and Equipment of Camps.

In locating a camp several points must be taken into consideration, a few of which are: The camp must be easily accessible; must not be too far from base of operations; water supply must be best obtainable; good drainage away from water supply.

On account of the proximity of the camps to the villages of the Peninsula supplies can be obtained very readily and, therefore, very little is kept on hand. The hauling teams bring out all the supplies on the last trip back to camp, thereby eliminating the necessity of toting teams. For the season 1909-10 the cost figured out to 16c

per meal, or .48c per man per day with an average number of 20 men in camp. To-day the cost is double this amount.

Snow ploughs are used on the hauling road, and hauling sleighs equipped with 6 ft. and 8 ft. bunks and binding chains. The sleighs are loaded by hand with cant hooks and spiked skids, or by block and tackle.

How the Roads are Laid Out.

The general topographical features and their effect on the making of roads is interesting. The foreman of the camp looks over the ground in the early part of the season and decides where the road will go, indicating it by blazing the trees along the course. It is a very difficult thing to decide on a road in country of this nature as there are so many choices and the question is to pick the one with the least amount of evils. There are short momentum grades of 20 feet at least. Then there are long drawn grades of between 10 feet to 15 feet.

In going down these grades a chain is looped under the back runner and although this is hard on the road it effectively brakes the sleigh, but generally hills are sanded. If the chain ever broke there would be no stopping the sleigh, but that possibility has never hap-

The blister rust appearing about May 1st each year on swollen portion of white pine stem

pened. As soon as the cutting begins in the fall two men are detailed to get the roads in shape. These two men are supposed to have the road ready to break in as soon as there is sufficient snow. During the hauling season they are busy keeping the road in shape. On some of the smaller down grades, hay is used to hold the loaded sleigh, back. No tote road is required, the hauling road serving that purpose. The cost and upkeep of roads averages approximately \$3.00 per day throughout the season.

There are the cutting crews and the skidding crews. Six of a cut-

ting crew are supposed to keep a skidding crew busy. Then there are the two men on the roads and a few teamsters.

A cutting crew consists of two men. Each crew is supplied with a cross cut saw, wedge and measuring pole, while each man has his axe. Most of the axes were 4 lbs. in weight.

The Utensils of the Cutting Crew.

Before commencing to fell a tree, each man clears away any obstructions on his side. Then they both notch the tree at once. It was surprising to me to see how readily all the men swung right handed or left handed, as the case required. The two men worked together to a nicety in notching the trees. Then they sawed it through from the opposite side, felling the tree, and proceeded to cut off the first log, measuring the length by the pole as they waded through the deep snow. The logs are cut 12 ft. long normally, but occasionally 10 ft. and 14 ft. lengths are cut on account of a defect in a log. As each man proceeds up his side of the fallen tree any branches are removed which are met with. On the whole few branches of any size have to be removed for the trunk usually becomes crooked at about this point. Most of the trees yield 3 or 4 logs. Six of a crew cut an average of about 7,000 per day.

A skidding crew consists of four men. Two of these roll the logs up unto the skidway as they are delivered to them by the skidding team, and mark length on small end. One man drives the team snaking logs from where they were cut to the skidway. The fourth man clears away the snow from the logs in the bush sufficient to make them plainly visible. He also removes any obstructions which would hinder the passage of the team. Only one team with a pair of tongs is used with each crew. The team oscillates from side to side of the skidway. For example, if it brings a log from the east to the skidway after unclamping the tongs it proceeds westward for its next log, thus saving unnecessary turning.

The snaking trails are from 50 feet to 100 feet in length. All that is done in "constructing" such a trail is to cut away any obstructions which would impede the movement of the team. The location of skidways is important as there are many places that would be practically inaccessible to a team and sleigh. From these places, however, a team can readily snake the logs to the skidway which is located in as accessible a position as possible both to the hauling teams and cut timber. Then in the construction of the skidway the loading of the sleigh is kept in mind, the logs laid for the foundation of the skid being kept where possible above the level of the hauling road. The number of logs to the skid varies considerably. Under favorable conditions logs from a considerable area are brought to one skid and again in other cases the conditions are such that only a few logs are put on each skid. The number ranges from 25 to 300. The logs remain on the skids any where from two hours to three months.

Hauling of the Logs to the Mill.

As soon as the road is in good enough condition the hauling of the logs from the skids to the mills commence. It is usually Christmas before the road is well broken and ready for steady hauling. Sometimes, however, the weather does not permit hauling till after the New Year. Two men are kept on the main road throughout the hauling season and they are able to keep 1 1/2 miles of road in good shape. Hay is used on the short steep down grades and is varied in amount to regulate the impetus required for the grade immediately in front.

The sleighs used are of good construction, being the ordinary bob-sleigh with cross chains. The bunks are from six to eight feet in length and each sleigh has of course, a binding pole and chain. The pole used is always ironwood. In loading the sleighs the cant hook and spiked skids are used or block and tackle. With a skid of small logs, two men can handle the logs, but in most cases the third man is necessary. Care is taken to have the load balanced nicely before the logs are bound on by the chain.

An average of about nine logs per load is good hauling, taking into consideration the road and the fact of the logs being maple and beech instead of the lighter coniferous logs. The average for a season is 500 ft. per load. The hauls vary in length, one to five miles being about the average. In good weather two to six trips daily are made. The companies have teams of their own for hauling. The contractors are mainly farmers of the surrounding country who have very little farm work to do during the winter months.

The Scaling and the Way it is Done.

The scalers are employed by the companies and are paid a salary regardless of amount passing through their hands. The scale used was a combination Doyle and Scribner rule, taking Doyle rule for all logs under 28 in. in diameter, and Scribner for all larger diameters. The scaling is done at the mills or at different points along the shore. When the logs are cut in the bush, the small end of each log is marked with blue chalk, so that when a load is drawn unto the dumps the scaler has no difficulty in scaling all the logs at the small end. If a log is not marked it is missed, but the driver usually sees that all the logs are marked. The scaling is done on the sleigh just before un-

loading at the end of the haul. In this way the number of board feet hauled by each man can readily be kept track of.

Any tree which will pay for the expense of taking it out is cut. From this it will be seen that the tree weeds, the crooked, deformed or decayed trees and trees with a stem too small to make a log are the main components of the forest left by the lumberman. Then too the only seeming object of the operation is to get the logs out at the lowest possible cost regardless of the condition in which the forest is left. As a result the ground is left covered with an interlace mass of tops and branches.

The Condition After Timber is Removed.

Being composed of hardwoods the resulting brule is much less liable to fire than if it were composed of coniferous woods. However, it does add greatly to the fire danger which could be considerably diminished by the downing of this brush.

This area is only suitable for the growing of trees. The composition of the forest, as well as the soil, is steadily deteriorating, due to the present system of handling the limits. I would suggest that a diameter limit of 10 in. D.B.H. be adopted, and that as many as possible of the undesirable species and poorly formed individuals be girdled. This can be done by the cutting crew at a very small cost, and the increased growth conditions would amply repay the small expenditure. Then again the young growth should receive some consideration and efforts should be made to obtain reproduction of the best species. The hardwoods are becoming scarcer in Ontario from year to year, and it is high time that we manage our remaining hardwood forests in such a manner that they will continue to supply our necessities.

N.B. Lumbermen Want Better Consideration

A large delegation of North Shore lumbermen in the province of New Brunswick, mainly composed of those who only hold small areas of Crown lands, recently waited upon the provincial government and presented strong arguments why they should receive that consideration from the Crown Lands Department which was virtually promised them when the timber act was passed by the former government in 1913. That legislation provided that after the Crown lands were classified the smaller lumbermen only holding limited areas of the Crown lands of the province would be given at least twenty-five per cent. of the very large limits held by some of the big operators. They pointed out that they had better equipped mills than some of the largest limit holders, and yet had but a small area which would not suffice to provide the equipment with saw logs. Among those present were: W. S. Loggie, M.P.; D. J. Buckley, J. W. Vanderbeck, D. Manderville, J. W. Maloney, W. J. Thurber, J. D. Volkman, J. S. Fairley, F. D. Swim, Karl Swim, Frank Fairley, Alex. Storey, Earle Storey, J. T. Sutherland, Guy Johnson, A. Bryenton, William Anderson and their counsel George McDade. The delegation urged that the government should amend the law so that the appropriation of this twenty-five per cent. of the larger holdings might be made before the Crown lands are fully classified. The government promised to consider the arguments presented.

Should Know Costs of Doing Business

It ought to be obvious to every retailer, that in view of the favorable prospect for fixing of retail prices to the consuming public he should lose no time in the matter of studying out his costs of doing business, so that he will be able to make a right showing of what they are to the authorities entrusted with this work. Some dealers probably are not sure as to what their costs are. In such a case it would pay the dealer to employ a competent accountant to figure it out for him. Then he will be able to tell whether the fixed price is just to him or otherwise.

Of course, it's practically impossible for the authorities to ascertain the costs of every individual retailer. Therefore, they will obtain them from a representative number in different sections of the country, and from them strike an average which will be used in fixing the price. So it is up to the dealers themselves to be sure about what their costs are, for, as I've said, this will determine the action of those who fix the prices. It is possible there are some who think their own salary should not be included in their cost estimates. Any estimate based on excluding this is wrong and any business man doing it loses that much thereby. Doubtless, when this price fixing becomes a fact, there will be many individual dealers who will be receiving for the first time a salary for running their own yard.

If plans now under way are carried through logging operations on a very large scale will shortly be commenced on immense cedar and fir limits which lie some ten miles north of Port Haney. The limits are said to comprise over seven hundred million feet of the finest cedar and fir timber, and Messrs. Abernethy & Loughheed, local representatives of the Miami Corporation, of Wilmington, Delaware, are now seeking concessions from the municipality of Maple Ridge, which will enable them to bring the timber over certain roads in the municipality.

Sawmill Machinery and Equipment

The Latest Type of Link-Belt Combination

Where the practical requirements are strength and low cost the latest type of link-belt for elevators and conveyors which is being offered to the sawmill trade by the Link-Belt Company, of Chicago, is the malleable iron and steel "Combination" link-belt "C" class. The new combination has some very definite advantages for drag work. The model possesses a pin accurately fitted to the side bars. A flat portion milled accurately on the end of the pin is used fitting into a perfectly broached hole on the side bar. By preventing motion be-

The pin and side bar in link-belt

tween the pin and the steel side bars which hold it, the length of life in service is increased.

Among other advantages are pins and side bars made of steel having 75,000 to 80,000 pounds tensile strength per square inch, a hard, tough, durable grade of stock. Pins rolled smooth after forging. The rolling compresses and trues up the original hard scale surface. Cast centre links made of best grade of malleable iron for durability and strength. Pin holes in heads of links cored smooth and clean by a special process of manufacture, and forming with the rigidly-held, smooth, hard pins, an excellent joint for durability. Accurate pitch and small clearances, furnished by accurately made patterns and dies. This preserves the accuracy of fit between wheels and Link-Belt, and makes both more durable. Close-fitting joints which keep out gritty material that might otherwise work in and cause rapid wear in many classes of work. The pins are usually provided with cotters, making the "Combination" link-belt detachable. Riveted "Combination" link-belt can be furnished if desired.

Finding Right Amount of Strain for a Band Saw

The correct amount of strain a band saw should be subjected to has been discussed many times. Some saw filers like an excess of strain on their saws while others find that just enough strain to keep the saw from slipping on the lower band wheel gives perfect satisfaction without producing snaky saws or causing cracks in them. Recently the subject of the correct amount of strain came up between two expert filers, says "The American Lumberman." One of the filers used 5,000 pounds strain with good results, while the other used 9,000 pounds strain. As both filers were working on exactly the same size mill, of the same make and with saws of the same size and make, the saws being 12-inches in width, 14-gage and 44-feet 6-inches in length the situation was remarkable, especially as each mill gave good results and cut nearly the same amount of lumber a day. This excited the curiosity of the writer who has a hobby of looking deeply into mechanical matters and a number of tests were made with the following results:

Filer No. 1, or the 5,000 pounds strain man, used tension of the true circle type, running his tension from edge to edge with little tire. As a result his saws showed no cracks, but had a habit—no matter how fitted up—of dodging slightly on striking the log. After the saw sunk itself it cut a good line thereafter. This was the only defect found in the mill and the reason for it will be explained later in this article.

Filer No. 2, or the 9,000 pounds strain, used a much deeper tension, but a 1¼-inch stiff tire on the tooth edge and a 1½ inch tire on the back edge of his saws. His saws cut straight lines without the dodging resulting from Filer No. 1 saws, but the latter sawyer's saws showed a number of long cracks. Naturally, the first thought was, which was right? Who was really getting the best results? One filer was saving a large saw bill each year, but produced slightly defective lumber sometimes, while the other made very good lum-

ber but had a new pair of saws shipped him every sixty to eighty days. From the writer's viewpoint as a band filer, both men were working their saws at a disadvantage. One used too little strain on his saws and the other used too much.

To explain my findings and the method I have used to advantage for years on all sizes and makes of mills, the accompanying sketches were prepared. Figure 1 shows the lower band wheel and a section of the straining device. At "A" is shown the weight that puts any desired strain on the saw; that is, when the hanger is at the notch marked 9,000 the strain on the saw is 9,000 pounds. At "C" is shown the bearing on top cap. Note that the shaft fits snugly against this top cap of the bearing and with pressure. The dotted line between the lower half of the bearing and the shaft end shows the slight looseness to prevent undue heating. When the strain is off the mill or saw this shaft finds a resting place in the lower half. With the shaft hugging the top cap with pressure straight lumber was produced as there was no dodging of the shaft end when the saw struck the log and with saws run as Filer No. 2 ran them the broad tire, which was nothing more or less than false tension or a useless strip of dead steel, served as a cracking target for the excessive strain, although the saws made good lumber. Figure 2 is an enlarged view of the same shaft end and bearing and shows how the shaft end should fit up snugly as a result of the strain. Figure 3 shows what caused the dodging of the saw in the case of filer No. 1, or the small strain man. At "F" is shown a dotted line, that means there was not enough strain on his saws to hold the shaft up as in Figure 2. Thus every

time the saw entered a log this shaft would jump up against the top cap of the bearing and cause the trouble. By adding on more weight to make the strain 7,000 pounds, the weight of the lower band wheel would be just overbalanced and perfect lumber produced. Thus the true circle tension with narrow tires or edge to edge tension does the work, saves saws and seldom if ever cracks a saw. It pays, sometimes to note the hidden things about the mill and the more a filer knows about such things as this the greater his worth and usefulness will be.

Why a Band Saw Should Be Lined Square

Many a filer has asked why it is that band saws are so inclined to lead in the log when they are fitted perfectly level, tensioned evenly, correctly placed and with swaged teeth ground square on top, underneath and of the same width spread on both sides of the saw, says R. C. Leibe, in the "American Lumberman." The writer, after close observation and considerable study, enlarged the saw and swaged teeth on paper in order to get at the direct results of lining the saw in the log, a custom that is so general that it may almost be termed universal. This study brought out some points that led to experiments in actual operating. These experiments turned out so well that they are here passed on for the benefit of other filers. After all, there is nothing very remarkable about this method, which consisted merely of making everything perfectly square, including the band mill, saw and carriage, which is guided by the V-rail. The result, however, was a great improvement in sawing conditions when everything was thus put square.

The real situation is best grasped by a study of the accompanying illustration. Possibly because of their very smallness the swaged band saw teeth have not been greatly considered as having much to

do with running a saw, but actually the swage points have as much to do with the running as tension itself. The faces of the swaged points must be kept square and it is as important as well to line the supporting saw blade square with the timber to be sawn, or else an unnatural condition will result. Fig. 1 shows this unnatural condition very clearly. At (C) is a view of the lower band steel, while at (D) a very much enlarged section of a band saw is shown. This was made very large compared with the band-wheel to show how a saw lined in the log a trifle, as is always the case, must work under the wrong condition. The band wheel is shown lined in the log to a great degree to bring out the situation clearly, while the log section in the sketch shows the position of the carriage that holds the log. Note the dotted line across the log, and the dotted line that touches the face of the band wheel. This shows clearly the direction in which the saw is travelling when it hits the log. That is, the inside of the swaged point comes in contact with the log end first and maintains the lead throughout the cut notwithstanding the nature of swaged teeth always to lead to the higher or longer joint which contains the most swage. The saw is lined in the log so much that it overcomes this high side tendency and does lead into excess. This places an unnatural working condition on the saw.

The slight lead in the log is claimed by old-timers in the game of milling to overcome several things, including the saw's tendency to slide off the hill of a rounding log, or to make a saw take hold of a slick, barked log when sawing the first slab. In Fig. 2 is shown the condition under which a swaged saw tooth may be run and still strike

FIG. 4

FIG. 5

FIG. 6

the log at the same angle as shown in Fig. 1, in that one corner of the swage point takes the lead. However, in Fig. 2, the saw being square with the log and having no lead to counterbalance the high-side lead of swage, the saw would lead to the high side as shown. In Fig. 3 the ideal condition is shown. That is, all things should be square, with no lead on either side and no strain in the saw and mill. Fig. 4 shows the correct position of the saw in the log, with no binding of the blade in the cut from leading. Fig. 5 shows a square timber being sawn, the saw shown being buried in the cut, thus showing the working condition of a leading saw. Note how it binds against the board being cut off of the timber. Fig. 6 shows a case of extreme lead in the log. Avoiding this condition will save much time and

trouble for the mill man and bring good results. If the mill man will make his slogan "Square and Level With All Things Mechanical" there will be no trouble.

New Cutting Tool for Felling Trees

Instead of the usual type of saw, a cutting-tool has been used in felling trees and has proved quite a success, says "Lumber." The cutting teeth are arranged in spiral formation about a horizontal shaft so as to concentrate the cutting power upon a few points at a time, and the tool is brought into contact with the tree by means of a hand lever on the frame of the machine. The tool, or spiral saw, as it may be called, is rotated by belting from a gear train run prefer-

ably by an electric motor, or if desired the motor may be coupled directly to the tool shaft. The gear train is made use of merely to multiply revolutions and is, hence, not an essential part of the invention.

By arranging the tool shaft in a vertical position, the machine may be so constructed as to cut fallen trees into desired lengths. The cut is necessarily larger than that made by any ordinary saw, but no larger than that of an axe, and need not be extensive enough to constitute a serious objection. So far as strength is concerned, a tool of this description has decided advantages over the band type of saw and is not readily broken.

The principle itself is not a new one and is very similar to that employed in many planing operations in woodwork. In machining operations in iron also tools have been used that are patterned after the same general plan, so that the idea may be said to have been thoroughly tested in practice, at least to the extent of determining the strength and reliability of structure. There should be unquestionable possibilities in the scheme's application and extension.

The machine as used consists of a carriage mounted on suitable wheels and a frame in which are journaled the shafting for the gear trim and pulleys, while at the front are placed the bearings for the tool shaft. The front is open so as to straddle a tree, and one side projects well forward to form a guide which is provided with rollers to eliminate friction and facilitate the movement of the carriage.

Convenient Electric Hand Barker

The American Barking Drum Company, 440 South Dearborn Street, Chicago, manufacturers of the well-known American Barking Drums, have now turned their energies to the manufacture of a hand barker, concerning which they are now sending out announcements to the trade.

This hand barker was first developed for taking off the small patches of bark sometimes left on wood after passing through a barking drum. However, it has proved to be useful elsewhere also. The manufacturers find that it covers a broad field in the pulp, paper, lumber and even in construction industries.

The manufacturers will be glad to furnish full information on request. The barker is adapted to use with alternating current, voltage, cycles and phases of which should always be stated when writing for information of this kind.

How the Spirit of the Times is Changing

New Vision of Service and Co-operation is Being Developed by the Trend of Events

By W. A. McIlrath, Radville, Sask.

There is a changing spirit towards unity, co-operation, and standard methods.

The daily reports coming back to us of friends and comrades who have gone over "the long, long trail," fighting not for self, cheerfully sacrificing their individual lives to make safe your home and mine, is having its effect in starting us to think of the general good rather than self for self. A change of heart is going on. We are beginning to realize that the other fellow has merits, but that we were all blended with selfishness until we could not see them. The big task in which we are engaged is forcing us into closer touch with others and is giving us a new vision of co-operation and service and a realization that the Association is an opportune channel through which to carry on this spirit in a businessway.

To engage in co-operation with your fellow men on any cause that is for the general good makes bigger and happier men. The man-

W. A. McIlrath, Radville, Sask.

ager of one of the line yards, who is charman of the Red Cross organization for the city that ranks first in the west in its distribution to this cause, says: "I have never enjoyed anything as much in my life." Simply a case of getting away from self and working for a cause that means help to his neighbor.

Another lumberman who has become an active leader in the rejuvenation of the Winnipeg Boys' Home, reports: "It is more fun than to play golf." These are men who a few years ago thought only of business, but to-day realize there is a neighbor.

Formulating Plans for Good of All.

The lines of business that are pushing to the fore are the ones in which you will find unity of action and co-operation. The banks, the strongest institutions of our country, determine their policy and methods at association meetings, and the plans formulated there for the good of the business are followed by all.

The automobile dealers, than whom there is no more aggressive, follow a united line of action. A Kansas City paper has a full-page ad. to show "The automobile is a necessity," signed the "Retail Dealers of the City."

The Red Cross organization is an example of what can be accomplished through united action. With every one endeavoring to go it alone in his own way we could accomplish but a small part of what we have done.

The unity of spirit unconsciously grows as we continue to work in a body for any common cause. It is but a few years ago that a man thought no further than whether there was a chance to make money in the contemplated business, but to-day the great forces of common weal are sweeping us together until we now begin to feel that to succeed we must be an economic necessity and fit into the community. As an example of the changing spirit; five years ago there were four lumber yards at Bengough and one yard sold out to the other

three. The farmers then said the price of lumber would be raised, and there was a feeling of resentment. Last year another yard sold out to the remaining two and several farmers have since remarked that if the town were reduced to one yard they believed that it would be for the best. This is typical of the changing spirit towards unity.

Our Own Work and That of Another.

The great problem to-day is not conserving ourselves, but utilizing ourselves and so arranging our affairs that we can do our own work and that of another man who is "over there." This cannot be done by clinging to old ideas, hoping to make them serve in a new era. This is a period for co-operation and service—not competition. If we are to be in keeping with the spirit of the times we will make the Association a more integral part of our business.

The association is simply individuals working collectively. Our armies are made up of individuals, but individuals do not win battles. Every day we see new evidence of the power of standardized mass movements and it is our duty as retail lumber dealers to make our association embody this new spirit. Let there be a clear idea formulated for what is right and best for making our branch of the trade more of a necessity to the community, then get these ideas before members and non-members and arrange to standardize the features of the business that are ever causing friction and worry to both you and your trade.

Schroeder Company Active at Pakesley

The Schroeder Mills and Timber Company, who in April, 1917, removed their headquarters from Salines to Pakesley, some two hundred miles north of Toronto, on the line of the C.P.R. to Sudbury, have most comfortable offices, boarding house and storehouses erected at this point, and a large part of the virgin forest has been cleared. James Ludgate, of Parry Sound, is the Ontario manager of the company, and last winter they operated six large camps, and this winter are planning to conduct seven in that district, in Mowat and Blair townships.

The company at present are taking out a number of cedar and hemlock ties for the Key Valley railway, which is being built by them in conjunction with Lauder, Spears and Howland, to the site of the new mill of the latter some twelve miles distant on the Pickerel river. At Pakesley, the Schroeder Co. have a splendid crop of oats and other grain and a well kept garden, which is the admiration of all travellers.

On the walls of the company's headquarters there are a few expressive mottoes. One of them reads "This office is no meeting place, please respect its privacy." Another is "Notice. Liquor strictly prohibited. Gambling is against the law. Please do not do it. No dogs allowed. Dogs are of no use in a logging camp. It takes money to feed dogs. The food a dog eats will feed a pig."

Return of the Wooden Freight Car

Railway trade journals are welcoming the return of the wooden freight car. They unite in agreeing that wooden cars probably will continue to gain in use after the war. Much of the trouble with wooden cars in the past has been due to the fact that large numbers of them were constructed before the period of the heavy locomotive and long trains, and were not built strong enough to prove equal to the requirements of such service. Wooden cars now are being built with wooden underframes, and steel centresill reinforcements, and steel draft sills that will compete very creditably with all steel underframe construction. It also is possible to reinforce the large number of wooden cars now in service, and some very interesting articles on this subject are appearing in the railway technical journals.

Cottages in Woods Department—This is a type of the portable dwelling used at Crossburn, N.S., by the Davison Lumber and Manufacturing Company, Limited, of Bridgewater

Moving camp on sleds. One man in harness and shafts pulls while the second pushes and assists in steering it around turns by means of a gee pole attached to the rear of the sled

When B. C. Lumber was Sold by Sample in the East Its Excellence, Strength and Adaptability Were Unknown East of the Great Lakes Ten Years Ago—Many Prejudices Had to be Overcome

By Hugh A. Rose, Mason, Gordon & Co., Toronto

Hugh A. Rose, Toronto

Except as dimension timber, Douglas fir was practically unknown in Eastern Canada a decade ago. Its lightness, strength, durability and adaptability, while recognized on all sides in the West, had yet to be established in the eastern portion of the Dominion. Much doubt and prejudice had to be overcome.

I believe that I was the first salaried man to sell this product in Ontario, Quebec and the Maritime Provinces. Just ten years ago this month I opened an office at 3 Toronto Street, Toronto, for the Fraser River Lumber Co., and endeavored to introduce manufactured fir lumber. The encouragement which I received from a large number of retailers, who later became good customers, was certainly not spontaneous, and I might add, not even sympathetic.

I was informed there was really no market or use for fir in the east, that my job was an impossible one and they would give me six months to wear out.

It is no use denying the fact that many times I became downhearted, but I stuck to the proposition like a pup to a root, and gave no outward evidence of the feeling that I had at times within me. I wrote to head office telling them that while I had been unsuccessful in booking any business, I had no doubt that orders would result later. I received many letters in reply to my reports, and one in particular that I remember well. It was from the sales manager who acknowledged receipt of my communication expressing the hope that my efforts would be rewarded, although nothing had resulted up to that date. He sincerely trusted that my optimism was justified and that my work would not be entirely unavailing.

The Sale of the First Million Feet

From August 1st, 1908, to December 13th of the same year, I did not sell more than twenty cars, and it seemed as if the predictions which had been made by my encouraging (?) friends were about to come true. I had gradually sized up the situation, however, and had not lost confidence altogether. On December 13th I booked my first order of any size; it was for a million feet of car siding for Rhodes, Curry and Company, of Amherst, N.S. A week later I disposed of three-quarters of a million feet to the Canada Car Company, Montreal, which was followed shortly after by an order for a quarter of a million feet for the Crossen Car Works, of Cobourg, making total sales, within a few days, of two million feet of car siding.

The ice had been broken, and after that business came easier. I remained with the company for eight years, covering all parts of Ontario, Québec and the Maritime Provinces many times, and gradually developed the retail yard trade, as well as a large business with manufacturing concerns. My sales continued to grow until they averaged over a million feet a month, and have been improving ever since.

Introducing Mixed Car Trade in East

I also had the honor of being the first salaried salesman of B. C. products to work up a mixed car trade with the retailers in the East in the shape of fir for ceiling, flooring and finish. I found it difficult at times to describe adequately to the retail man the merit of the lines which I represented, and sending to the mill, I had samples forwarded of the manufactured product. I had a special sample case made, which was about a foot long and folded up conveniently. It contained everything from a small moulding to a five-inch casing, all of the highest grade. This case always aroused the interest of the dealer, as in those days he possessed a strong desire to examine personally what he was buying. Of course, the use of samples has been rendered unnecessary, as the East is now thoroughly familiar with the worth and value of B. C. lumber. It was also my pleasure to introduce the sale of fir doors in Ontario and the lower provinces.

Calling upon the country trade by means of an automobile is no

longer regarded as an innovation, as many lumber salesmen and others make use of this modern means of conveyance. I believe that I was one of the first lumber salesmen in the East to cover my territory in a runabout. It was one spring several years ago that I set out with a car to visit my customers. I found that time could be gained thereby, that I did not have to wait for railway trains and, when my business was finished in a certain town or city, I could go on to the next. Previously, I had frequently to sit around for hours waiting for connection on the railways. I also discovered that I could make many of the smaller places, which if one had to depend on steam or electric lines, it would require a day to get in and out of. In towns or cities where customers are located widely apart, it was a simple matter to get from one to the other without the loss of precious hours. Then in the evening I would often travel on to the next town and be ready for business early in the morning.

As my means of locomotion was right at hand, I was in a position to move along when my call was finished and make the next one. There are some cities, in western Ontario, for instance, where the retail yards are so widely scattered, that to make all the visits by street car or walking, would take fully a day. With a motor, the round could be completed in two or three hours at most, and then I was ready to travel to the next place, as distances are not great and the roads on the whole very fair. The employment of the automobile for business purposes and as a quick and economical means of getting over the territory, has, in my opinion, come to stay, and its purpose and convenience in selling all lines of goods are universally recognized.

Some two years ago I decided to get into the wholesale lumber business, and having formed a very favorable opinion of the organization I am now with, during the eight years that I was in opposition to it, I entered its service. My connection with Coast products has been continued owing to the established relations of the company with the most reliable shippers in B. C., and I am pleased to report that a steady and growing business has been developed with satisfied customers.

Appointed Lumber Commissioner to Great Britain

The trade in Ontario will be interested in the announcement that L. B. Beale, who was for some time in charge of the British Columbia forest products office in the Excelsior Life Building, Toronto, and made many friends in all branches of the business, has been appointed a British Columbia government inspector as special lumber trade commissioner to Great Britain and Europe. For this position he is eminently well qualified as he spent sixteen years in the lumber line in the Old Country and has a practical insight into British building requirements. His acquaintance with architects and others is a wide one and he enjoys the confidence of all. It will be the duty of Mr. Beale, in his new post, to foster and develop the British and other European markets for the products of the Pacific Coast province and to secure the fullest and most accurate information possible on the outlook and requisitions across the water in regard to timber, and more particularly the lines which British Columbia is able to furnish in abundance.

L. B. Beale, Victoria, B.C.

Hon. T. D. Pattullo, Minister of Lands, in making announcement of the appointment of Mr. Beale, said: "The Government is determined to win for British Columbia its share in the overseas market. We have watched the trend of events closely and fully realize that British Columbia will have to buck against strong competition. We want to be prepared for any situation that may arise. If conditions warrant, Mr. Beale will remain in Europe permanently."

Mr. Beale will get in intimate touch with the Timber Controller in Great Britain, and also with the Ministry of Reconstruction.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Wanted—Slabs and Edgings

Three to five cars. Apply Box 764, Canada Lumberman, Toronto, Ont. 15-15

We are in the market for White Pine, Red Pine, Jack Pine and Spruce, Hemlock and Lath. Apply Box 763, Canada Lumberman, Toronto, Ont. 15-15

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Ties Wanted

Cedar, Oak or Maple. Two to five cars. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Sawdust Wanted

Four or five cars of ordinary Sawmill Sawdust. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Cedar Wanted

Good Eastern Cedar, suitable for boat building. Peterborough Canoe Company, Ltd., Peterborough, Ontario. 15-2

Wanted

Two or more cars 1 in. Cull Basswood, also Mill Run Basswood. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Wanted

100,000 ft. 1 in. and 2 in. Cull Lumber, White or Red Pine, Spruce and Hemlock. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Trimmer Ends Wanted

White Pine, Red Pine and Spruce, 1917 or 1918 cut. Write stating approximately what you have. Give thickness, conditions as to color, worms, etc. Box 738, Canada Lumberman, Toronto, Ont. 10-15

BIRCH AND BASSWOOD WANTED

We will buy large quantities of 1½ and up, No. 2 Common and Better, log run Birch, with none of the best lumber removed. Also No. 2 C. and B. Basswood. Terms cash. P. O. Box No. 1595, Montreal. 14-17

For Sale-Machinery

Machinery For Sale

Economist Light Planer and Matcher. 24 in. Eclipse Pony Planer. Jointer, Band Saw. 12 in. 4 side Moulder. Variety Trim Saw. Power Feed Rip Saw. Chain Mortising Machine. 48 in. Invincible 3 Drum Sander.

A. J. LINDSAY, 90 Pembroke Street, Toronto. 14-17

For Sale

20 logging cars equipped with two 4-wheel trucks, air brakes, standard gauge, wheels 24 ins. in diameter. 17 extra trucks for the above cars. 10 extra air brakes for above cars. 1 Locomotive, standard gauge, 56,000 weight. 250 pieces of 45 lb. rail in number 1 condition. BISHOP LUMBER CO., LTD., Nesterville, Ont. 14-15

Machinery For Sale

Boiler for sale, Goldie & McCulloch, 60 in. x 14 ft.

GUELPH LUMBER COMPANY, Guelph, Ont. 11-15

Steam Engines for Immediate Sale

Suitable for general mill work, power transmission by belt, rope drive or spur gearing, for driving woodworking, grinding, crushing, or hoisting machinery, or air compressors, in factories, saw mills, pulp and paper mills, ship yards, munition works, mines, grain elevators, etc.

2—500 h.p. vertical cross compound, 4 valve engines with shaft governors, cylinders, 18 and 24 x 24 in., 150 r.p.m., with surface condensing equipment for each engine.

1—900 h.p. vertical cross compound, 4 valve engine with shaft governor, cylinders, 20 and 38 x 24 in., 150 r.p.m., without condenser.

2—600 h.p. horizontal cross compound, Corliss engines, 18 and 34 x 42 in., cylinders, 100 r.p.m., with separate surface condensing equipment for each engine.

1—1200 h.p. cross compound Corliss engine, cylinders, 26 and 52 x 48 in., 85 r.p.m., with surface condensing equipment.

2—1200 cross compound Wheelock gridiron valve engines, cylinders 27 and 52 x 46 in., 90 r.p.m. One surface condensing equipment for the 2 engines.

These engines now have electrical generators mounted upon them which the present owner wishes to keep. Generators to be removed from engine shafts and engines sold without them.

These engines could be fitted with new drive wheels for either belt or rope driving, or with spur gearing, making them available for any kind of factory duty.

The 1200 h.p. Corliss engine is an especially heavy machine. All of them have been operated at 135 pounds steam pressure and about 25 in. vacuum.

There is also 1 250-h.p. Wheelock type, cross compound type engine, cylinder 16 and 27 x 40 in., with belt flywheel and surface condenser.

These engines are to be sold as they stand. Overhead hand traveling cranes in place available for dismantling.

Purchaser to make his own inspection, to have access to all available records, and to remove engines and condensing equipment at his own expense. The air and circulating pumps to accompany the condensers.

If prompt possession of any or all of these engines is desired, time will be saved by the Purchaser sending his representative here without delay.

Correspondence is desired only with parties who have immediate use for any or all of these engines.

WINNIPEG ELECTRIC RAILWAY CO., 14-15 Winnipeg, Man.

To Whom it May Concern:

This is to certify that we are now manufacturing in Canada, and are prepared to furnish box stuff trimming mechanism for planing machines of S. A. Woods type, or any other woodworking machine, patent No. 70777. The Canadian Fairbanks-Morse Co., Limited. 15-15

Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

Position wanted as band sawyer, rig or lathe. Good references. Box 575, Canada Lumberman, Toronto, Ont. 14-16

Position Wanted

By a young married man, 33 years of age, of good address and appearance. Fifteen years' experience as an inspector, wishes to make a change. Best of references. Box 769, Canada Lumberman, Toronto, Ont. 14-18

Wanted-Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents.

OFFICE MANAGER for lumber manufacturing concern, must be familiar with accounting and costs. Good position to right party. Apply, giving references, to Box 770, Canada Lumberman, Toronto, Ont. 15-16

Wanted a First Class Band Saw Filer, who can speak French, capable of guaranteeing his work, to commence immediately. State terms and references. Address D. G. RHEAULT, Mont Joli, P.Q. 15-15

Logger Wanted

Good man, experienced in logging by railroad and machinery. Donkey, log loaders and railroad all ready. Will pay salary and commission, or let contract. State experience and compensation wanted. Location near Parry Sound, Ont. Apply Box 761, Canada Lumberman, Toronto, Ont. 15-16

Review of Current Trade Conditions

Ontario

Conditions in the general lumber situation remain about the same. July is usually regarded as a comparatively quiet month. Some stimulus has been given to the building trade, owing to the encouragement of the Ontario Government in providing loans to municipalities on certain conditions and at a low rate of interest, particulars of which are fully set forth in another column. Returns from different cities show that building activities are growing more extensive, although there is not nearly the amount of construction under way that there should be to meet the demands for medium-classed dwellings. Prices on all lines of lumber are well maintained, and there is every indication that they will go higher. Some heavy sales of cuts for the season have been made by different firms and top-notch figures have been obtained. Members of the trade who closely scan the horizon and calmly survey coming events are fully impressed with the idea that everything portends to augmented quotations in all lines of lumber. The incessant demand for higher wages on the part of employees and the restlessness of labor generally, the scarcity of help, higher transportation costs and increased operating expenses both in the camps and in the mills, all tend to bear out the prophecy that higher prices will result is correct. At some points available men are so few that when loading cars has to be done the mills have to shut down in order that shipments may be made. In other words there is not an operating gang and a car-loading gang. Several smaller plants in the province have ceased cutting until after the hay making season.

The transportation situation is very good at present and there is not much difficulty experienced in getting cars. Some retail lumbermen are starting to replenish their stocks which have grown rather low, but there is no disposition on the part of the average dealer to buy up heavily. A carload of lumber costs nearly double what it did before the war, and while the quantity is just the same, the price represents a magnitude little dreamed of a few years ago. There is on the whole a feeling of confidence in the trade that splendid business will be done this fall in all lines of lumber. While the United States demand has fallen off somewhat during the past few weeks it is expected that it will be revived with increasing interest before the summer is over. Woodworking plants are fairly busy considering the number of men available and piano factories are exceptionally active, while furniture plants all report a fair demand.

There is talk of the government fixing the price on some lines of lumber in Canada the same as has been done by the United States authorities at Washington, but so far nothing authentic can be learned. There are many rumors afloat which cannot be verified and, in the meantime, the shrewd wholesaler is casting an eye over the future and wondering how high lumber will go in price, and whether he should contract for larger supplies than he has already done.

As fully expected the increase in freight rates has come on Canadian roads and the reasons are conveyed in a recent despatch from Ottawa, which says:

Acting on a report prepared by the Board of Railway Commissioners, an order in Council has been passed increasing freight rates to an amount sufficient to meet the increased operating cost imposed on the railways by the new wage schedule. The increase will average about 20 per cent.

The freight rate increases are the direct outcome of the acceptance in Canada of the McAdoo award, which applies to both Government railways and railways owned by private companies.

The railway companies, confronted with demands for increased wages, stated that they were willing to grant the increases allowed by Director-General McAdoo in dealing with the wages of railway employees in the United States. They recognized the general similarity of operating conditions in Canada and the United States, and they admitted that in general wage scales of railway employees in this country are similar to those in force on the other side. The railway employees are taken in their daily work from one side of the line to the other, and the brotherhoods are identical in their scope. Recognizing these facts and conditions, the Government made effective in Canada the so-called McAdoo scale of wages. As a corollary, the Canadian railways insisted that the McAdoo scale of freight rates, which were deemed necessary in order to carry the increased cost of railway operation in the United States, should be adopted here.

It has been reported that, in the export of certain kinds of lumber to the United States, it would be necessary to obtain a permit,

but one leading dealer, who has been in communication with the War Trade Board in Ottawa, states that that body has not been advised of any such a regulation.

Two outstanding items in trade matters at the present time are the demand for spruce and hemlock. The ruling price for mill run spruce is from thirty-eight to forty dollars, and there is very little dry stock on hand at the present time. It is estimated that the production this season will not reach more than sixty per cent. of what it was last year. There is also a good, steady demand for hemlock, and if next year's requirements are equal to this year there may be a shortage. Not much is doing in the lath and shingle market, but business is reported better than it was a few weeks ago, owing to the improved building conditions in certain centres.

United States

The labor situation and its restive disposition has been a source of annoyance and trouble to American lumbermen as it has been to Canadian operators. Now comes the announcement that on August 1st the American Government will control the recruiting of labor. It is thought that perhaps the lumber manufacturers may fare better under this arrangement than they have under the present competitive bidding that has been going on for some months where men are offered a few cents more to leave certain jobs and go to other mills.

In the hardwood line there is a good demand for box and crating lumber and prices remain firm. More hardwood is getting through to the east than for some time owing to the excellent shipping facilities. The government is taking a good deal of white pines, especially of the better grades, and quotations are firm. Operating costs are bound to advance and there is no disposition on the part of producers to lessen present figures. The government is taking the bulk of the cut of many of the large companies in the matter of air plane spruce and production is being speeded up by Western plants. The mills are experiencing difficulty in selling this stock and so large will the side cut be that much of it must be disposed of in the East. This is a great opportunity for wholesalers, especially as with the competition of many wooden vessels it will soon be possible to ship cargoes from the Pacific to the Atlantic Coast. Plans contemplate the production of 360,000,000 feet of airplane spruce a year as the minimum; the production of side lumber will not be far short of 1,500,000,000 feet. This is more than the entire spruce cut of 1917. As the bulk of this lumber will be assembled at certain mills eastern buyers ought to be able to make some very advantageous contracts to handle it. Apparently this is a providentially sent opportunity for the wholesaler to demonstrate his place in the lumber world.

Increases averaging approximately \$4 a thousand feet for New England spruce lumber were authorized recently by the Price-fixing Committee of the War Industries Board at Washington for the period from July 19 to November 1, 1918. The prices apply to the American Government, the allies, the railroads and others customarily purchasing lumber for mill shipment either by rail or water. They range from \$38 to \$60 a thousand feet, according to size, length and finish.

Red cedar shingle mills are cutting only enough to keep up with the demand, which is very light. The supply of labor at the cedar mills is light and logs are scarce and high in price. The Canadian mills continue to enjoy a fairly good demand in the United States and while sales are not of great volume they are steady. Prices vary, of course, but premiums generally seem to bring about \$4 at the mill. The Fir Production Board has placed an order with United States manufacturers for several million shingles for a government plant and there seems reason to believe that more orders of this character will be forthcoming. In fact, with the active part the government is taking in many housing projects and in the building of munition plants there ought to be a number of orders for shingles in prospect for the manufacturers.

Word from British Columbia states that it is not expected that the tax on shingles entering the United States will have an appreciable effect on the manufacturing of shingles here. In this connection the "American Lumberman" raises a note of protest and takes a different view of affairs. Under the caption "Canadian Shingle Competition Made Increasingly Onerous," it says editorially:—

"Canadian shingles have another unfair advantage. From time to time, manufacturers of shingles on our own Pacific coast have protested that they are at a disadvantage as compared with Canadian manufacturers, because of lower labor and timber costs in Canada, which are reserved for the advantage of the Canadian manufacturer by an export tax on Canadian logs, as well as by an ad valorem duty

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

of 3½ per cent. on shingles shipped into Canada from the United States.

"Prior to the war Canadian manufacturers also had water shipping advantages because of the fact that in our own coastwise shipping trade only American vessels were permitted and Canadian charters were therefore cheaper than our own.

"The 3 per cent. freight tax has now come along to give Canadian manufacturers another advantage because it is not assessed upon shipments originating north of the boundary line. Just why this should be this journal is not informed. Certainly there is no fairness in it. When a car of shingles crosses our border and pays the freight to our nationally controlled railroads it should contribute its share of the freight tax. This tax amounts to from \$8 to \$12 a car and it will be seen, therefore, that the Canadian product has a very material advantage. Indeed, it is said that in some instances American manufacturers located near the Canadian border have shipped shingles into Canada on barges and then sent them by rail freight to the desired destination in the United States, thus avoiding payment of the 3 per cent. tax. This can hardly be considered a commendable evasion, but they merely attempted to secure, as Americans, the advantage Canadians openly enjoy."

Great Britain

There is no change in the situation so far as imported timber is concerned, and the question arises what will be the state of affairs when things get back to normal. The speculative is always interesting and the trade is concerned chiefly in what is going to happen, for they know already what has happened. Importers, merchants and consumers are vitally concerned in the trend of affairs. Stocks are getting lower all the time and values have ascended accordingly. The abnormal figures have been brought about by a variety of causes, and among them are not only the labor shortage, but the higher transportation costs, increased wages and other factors.

One satisfactory feature is that the shipping outlook is getting brighter by reason of the augmented ocean tonnage resulting from the activity in the shipbuilding line. When space is once more available, it is thought that the present excessive carrying charges may decline, but it is doubtful if in years they will be down to where they

were before the war. With the process of readjustment in conditions such as the scale of living, supply and demand, there may be a lessening in values in imported timbers. Until that happy date arrives, however, there is not likely to be any radical alteration in the import situation.

The views of leading representatives in the Old Country regarding what will happen after the war so far as requisitions for Canadian timbers are concerned, are all expressive of big business. At present matters in the importation of hardwoods from Canada and the United States is very light and values are firm with a tendency to go higher. There is a great shortage of stocks in almost every line of lumber. The one thing which keeps matters on the move at all is the demand from the government for war activities. One authority states that the arrivals of imported timber are very light since the stoppage of "dunnage" and "deck" cargoes, and that it is difficult to obtain licenses, while the prospect for any improvement is regarded as not promising.

Business is brisk so far as home grown timber supplies are concerned, and ideal working conditions have prevailed for some time. There is a great scarcity of soft woods. The prospects of the native timber trade are reassuring, and the mills generally are kept decidedly busy supplying the various government departments with necessary material. Word comes from Scotland that the market for all kinds of hardwood continues good. Oak, 12 in. and upwards quarter girth, in lengths of 18 feet and upwards, is being asked for continually, and a few parcels of selected logs fetched the full price of 4s 9d on trucks at loading station. Several of the lots which were offered contain a proportion of coarse, badly-grown logs, and heavy second cuts, which, of course, realized prices much under the maximum. Small sizes of oak are moving off rather slowly owing to the labor involved at the bigger mills in converting, and where facilities exist for sawing this class of wood in country districts it is being sawn up into small scantling sizes. The calling up for military service of haulers and sawyers under twenty-three years of age will be productive of further difficulties for the trade, and if this course is persisted in the output of timber must inevitably suffer a serious reduction. Strong representations are being made to the government pressing for the further exemption of these men in the national interest.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Conditions in Ottawa More Settled

Renewed activity in domestic trade and business featured the Ottawa lumber market during the closing period of July as compared with the first part of the month and the months of May and June. Altogether the market, though it did not show much general outward change, bore indications promising more activity, and tended to become more settled.

Considering that the usual mid-summer lull was asserting itself, the business done by wholesalers, retailers, brokers and woodworking plants was in the main fairly satisfactory, for this time of year.

Some fairly large sales at good prices were made right in Ottawa during the closing period of July. An instance of it was the sale of two million feet in a week by Gilmour and Company. Building lines and retailers' stocks did not show a great deal of increased activity, when considered from the standpoint of big orders. Orders for smaller lots were fairly plentiful. With the wholesalers there appeared to be an increased demand for domestic use. Foreign or export business remained about the same as it was during the first part of the month or the month of June.

While the market generally could be very well classified as "quiet," it was nevertheless firm, and the reports from the majority of lumbering sources indicated that it is going to remain firm, and a considerable advance in price occur in the fall months. "If I had four or five million dollars I would invest it in lumber at once. Even though the prices are high they are not yet as high as they are going to be," was the comment of one of the most reliably informed parties in the lumber sales trade.

The manufacturers had not much to say about themselves or their activities. Conditions so far as sales went remained about the same as the early part of the month, and no great change in the sawmill and labor situations developed. On account of the decreased cut this season the manufacturers are not experiencing the same difficulty in marketing it that they had in other years.

There are various elements in the market causing the trade considerable speculation. Perhaps one of the greatest of them is to find the real reason for the falling off in American business that nearly

all the sellers in this section have experienced and reported.

Different explanations are given. One of them is that an increased number of cars have become available on the American railroads to permit transportation eastward and northward from the southern and western States. If this should be the explanation, the condition reflecting the decrease in Canadian sales in the United States should not extend over a greater period than five, or perhaps at the most eight weeks. When this time has passed the cars that may now be available for the transportation of lumber will have to be pressed into service to handle the western wheat crop. It will only be when the equipment is needed for other purposes that some kind of a true reflection or idea in the slump of export sales to the United States can be obtained. Even then it is doubtful if the situation could be gauged correctly, as the buying of lumber in the fall months would hardly offer the same prospects as the spring months and early mid-summer season.

Another view that is held by several as accounting for the decline in orders from the United States is that it is attributable to the prices fixed by the American Government for lumber. Different reports at Ottawa cited that, owing to the fixed prices lumber in the United States could be laid down at the ports of Boston or New York at a rate corresponding very closely to that f.o.b. the mill for the Canadian product. There seemed little doubt generally that the fixing of prices in the United States had considerable to do with the decline. The question is how long the supply of certain grades is going to last, and when a car shortage for shipment by United States roads ensues, will the American buyers not have to come to Canada for stocks?

Some indications that such may eventually be the case is slightly reflected by the orders that are filtering through. In the month of June the tone of the orders was mostly for second grade stock and mill culls.

The July business as far as it went not only contained orders for the seconds and culls, but there was a fair sprinkling of orders for No. 1 stock at good prices. If it is true that lumber can be laid down at New York or Boston at the same price it can be furnished f.o.b. the mills in Canada, it seems a little inconsistent that American business

Canada Food Board License No. 14-242

No Waste with Klim—Use Every Bit

KLIM is helping to win the war by eliminating all milk waste. Klim is pasteurized separated milk in powder form. In baking and cooking it can be used dry with such ingredients as sugar, flour, and cornstarch, or dissolved in water as a liquid. In puddings, custards, soups, sauces, tea and coffee, it supplies the food value—casein, albumen, milk, sugar, and salts—of fresh separated milk. The natural milk flavor is unchanged.

It is the water in liquid milk which carries impurities and cause bacteria to multiply and the milk to go sour. Free from all moisture, Klim remains sweet and fresh indefinitely in any temperature. Guaranteed free from chemicals or preservatives. Every ounce is available for use as needed. Absolutely no waste.

KLIM is the most economical form of milk to ship, to store, and to use (requires no refrigeration). Get it in 10 lb. tins with your grocery supplies.

even for seconds and culls should be coming to Canada, when freight rates from the mill to destination have also to be paid. At one lumberman remarked, "If everything is true we hear about the prices at the ports being equal to the Canadian prices f.o.b. the mill, and American business and some orders are still coming our way, there seems to be a nigger in the woodpile somewhere."

Aside from the International situation whatever its prospects and outlook may be, there seems to be nothing yet to justify Canadian manufacturers or wholesalers to adopt price cutting to get business on the other side, or for the sake of competing with American sellers. On the other hand, if American business is going to continue as it is, it will mean that the manufacturers and wholesalers in Canada will have to carry their stocks over, if they are not wholly consumed by the Canadian demand.

On the other hand, cost of logging, labor and food does not permit of reduction from the manufacturing end. This season operations will likely be on a smaller scale than last year. The cost will be equally as high if not higher. If the manufacturer carries his stock over he is taking the chance of coming in on a higher spring market with his dry stock. It is his option.

The labor situation with the manufacturers did not show any great change. Some migration to the West may take place about the middle of August. Wholesalers and retailers experienced no particular trouble in this regard.

Prices for the whole month of July remained unchanged. Lath and shingles continued slow. Some activity was noticeable in doors. Sash remained about the same.

Contracts for 150,000 T.N.T. boxes were let by the Imperial Munitions Board. No Ottawa plants secured orders. The majority of the order, it is understood, went to plants in the vicinity of Trenton. The reported price was about forty cents per box.

Very Little Shipping Done at St. John

The past two weeks have been the deadest of the year. Absolutely nothing has been shipped to the British Isles in the way of lumber, and very little has been sent to the United States, the advance in freight rates having stopped all buying of lumber at prices asked by the manufacturer, who, unless he receives the figure asked, cannot have a reasonable profit. Mostly all good selling places in the United States are embargoed, and, as fast as one embargo is lifted another is put on. Today, as far as St. John is concerned, shipments are very few, and it has been many years since as little stock has gone out of here as during the last two weeks.

No prices can be quoted which are accurate, as sales are hard to find. House building and repair work are not as good as a month ago. The factories are busy, but it is because of the very limited crews which they have that keeps those employed active on a small amount of work. Prices for factory work are steadily advancing, higher labor charges and smaller turn out per day being largely responsible for this extra cost. Both laths and shingles are very hard to sell and prices are being shaded to keep stocks moving.

The outlook is not very promising, although there are different opinions regarding it. Of course, all would be changed by the government coming into the market and taking the lumber production, or a cessation of the war—both of which yet seem a little distant.

Montreal Looks For Higher Quotations

Market conditions in Montreal are about the same as last reported. Business is rather slow, although there is a fairly good demand for box lumber. The American orders are not as plentiful as before, but deliveries on previous contracts are now going ahead at a great rate.

A wholesaler who has just returned from a visit to mills in the Quebec district and in the Ottawa Valley states that every manufacturer spoken to was emphatic in saying that prices are certain to still further advance. This belief is based on the ground that operating expenses are all tending upwards, and that the amount of lumber available in the fall will be of a very restricted amount. Should the railwaymen obtain higher wages, this will react on the general labor situation, and lumbermen will be bound to follow the lead of the railway companies if they desire to retain their men. It might be argued that the further boosting of values will tend to cut down the demand, but against this it is said that the supply is so small that it will not be more than equal to requirements which must be filled.

There is also a widespread belief amongst wholesalers that we shall see higher values, and some of them are not keen to sell in large quantities, being confident that the lumber can be sold to better advantage later in the season.

One local wholesale firm, with a view of overcoming transportation difficulties during next winter, is taking advantage of the present liberal supply of cars and piling lumber in the city. This method, of course, involves a certain amount of expenditure, but it obviates the

uncertainty which is always present when lumber has to be delivered from the mills in the winter.

Very little lumber is being sent to the United Kingdom, all for the government. The shipments include silver spruce, hemlock, pine and spruce.

Getting Ready for the Retailers

First Annual Gathering of Trade in Ontario Will Be Held at Toronto on September 3rd and 4th

The first annual convention of the retail lumbermen of Ontario will be held in Toronto on Tuesday and Wednesday, September 3 and 4. This will be a most favorable opportunity for visiting the Queen City, as the Canadian National Exhibition will be in progress, and it is confidently expected there will be large and representative attendance from all over the province. The wholesale lumbermen of Toronto are going to do their part, and will tender the visitors a dinner on the night of September 3. It will probably be held at the Royal Canadian Yacht Club, Centre Island.

At a meeting of the Wholesale Lumber Dealers' Association, Inc. held on July 26, A. E. Eckardt occupied the chair. It was moved by C. W. Wilkinson, and seconded by J. L. Campbell, that, upon the occasion of the visit of the retail lumber dealers of Ontario to Toronto to attend the first annual convention on September 3, the Wholesale Lumber Dealers' Association, Inc., tender them a banquet in the evening, the expense to be met by the latter association by means of an assessment among its members. A motion was also carried appointing A. K. Johnson (Chairman), W. C. Laidlaw and Frank Oliver as a dinner committee to make all the necessary arrangements.

On motion of Joseph Oliver and J. A. McBean, it was decided that special invitations to the dinner be sent to the Mayor of Toronto, the President and the Secretary of the Toronto Board of Trade, as well as to the President and the Manager of the Canadian National Exhibition.

Resolutions of condolence were passed and will be sent to Edward Clark, owing to the death of his son, R. L. Clark, and to Mrs. W. J. Hetherington, owing to the death of her husband, W. J. Hetherington. Since the June meeting of the Association these two members, both of whom were present on that occasion, have passed away, and in the resolutions appropriate reference is paid to the memories of the departed.

As already stated, the directors of the Ontario Retail Lumber Dealers' Association will hold their first annual convention in Toronto on September 3 and 4. The first day will be devoted exclusively to business matters and the sessions will take place in the Board of Trade rooms, Royal Bank building, corner of Yonge and King streets. From all over the province comes word that the lumber merchants will turn out in fine style, as they can combine business with pleasure. The second day of the gathering will be devoted to visiting the Canadian National Exhibition, where special privileges will be accorded the members.

On the morning of Tuesday, September 3, the delegates as they arrive will meet in the Assembly Room of the Board of Trade and register, and, if possible, certain routine matters will be attended to in the forenoon. In the afternoon there will be a business session, at which addresses will be delivered by President Thomas Patterson, of Hamilton, Horace Boulton, Secretary, and the Chairmen of the various Standing Committees. There will be a general discussion on several important matters relating to the progress, usefulness and expansion of the Association. The details will be announced later.

In the evening the members of the Wholesale Lumber Dealers' Association will entertain the visitors to a dinner, which, in all probability, will be held at the Royal Canadian Yacht Club, Centre Island.

Wednesday, September 4th, will be spent by the retail delegates at the Canadian National Exhibition. Special privileges are being extended the visiting lumbermen by the Directors of the Exhibition. The members will be accorded free admission to the grounds, and to the grand stand in the evening, when a section will be set aside for their convenience. A large tent on the grounds will be used as a meeting and resting place for the visitors. The officers of the Ontario Retail Lumber Dealers' Association will be the guests of the Exhibition Directors at the noon-day luncheon.

Every member of the trade should keep September 3 and 4 in mind and make it a point to be present at the big assembly in Toronto on that date.

The War Industries Board, Washington, announced new maximum retail margins for fir and southern yellow pine lumber for the Government's emergency lumber requirements for the period ending July 31, purchased at the Atlantic seaboard. The margins agreed to by the price-fixing committee and the industry range from \$2 a thousand feet to \$12.50.

All "Reliance" Chains are provided with a wide-wearing shoe on one side of the link.

Note also the double-keyed pin head to prevent the pin from turning.

How Guelph Firm Gets After the Business

Modern Merchandising Service Provided, Backed by Liberal Advertising and Practical Aids—Other Helpful Features

One of the live firms in the retail lumber line which believes in getting after new business, and especially the trade of the farmers, is the Guelph Lumber Co., Guelph, Ont., of which James Harrison is the progressive manager. The company has every faith in the effectiveness of printers' ink to attract new customers and increase the patronage of old ones and makes liberal use of the Guelph newspapers. The merchandizing service and efficiency of the organization is widely known, and a recent, well-displayed announcement, which appeared in the press, reads as follows:

Farmers of Wellington, Important Notice.—Free Plan Service of Farm Buildings, hog houses, poultry houses, garages, barns, implement sheds, etc. Your order will give you without charge a building plan, elevation and section, with lumber bill showing where each piece goes. Let us save you worry, time and money. Get particulars from office of Guelph Lumber Co., James Harrison, Manager. 'Phone 1068.

The response to this advertisement, which is only one of several inserted by the firm, was very gratifying. Each caller is given a series of neat booklets, numbered, and dealing with a different building. On the first page there is shown a perspective view, then a plan, elevations and the necessary detail drawings. In addition there is listed a complete bill of material with the price of each item and the total figure for the complete materials is also furnished. Everything is presented in a simple and easily understood manner and the farmer, stock keeper, poultry raiser, garage builder, gardener, live stock breeder or suburbanite knows exactly what such and such a type of structure is going to cost him before he proceeds with the work. This is a personal, worth while service, which is widely appreciated, and in case a slightly different building from the one illustrated is desired, there is at all times a competent estimator on hand to furnish the information promptly and accurately. The plan and the booklet form an interesting comparative basis from which to work, and if a customer has some material on hand such as joist, studding, lumber,

etc., which he wishes to employ, it is not a difficult task to eliminate these items from the bill of materials and deduct them from the total price. Should a customer require a different type of building than that shown in the literature, an idea is secured of what he wants and a bill of materials is prepared and submitted. A patron thus

Field gate made by Guelph Lumber Company, Guelph, Ont.

knows exactly where he is at when contemplating anything in the structural line and a splendid trade has been built up with the rural community. Other features of the firm's service or the class of work it is prepared to execute, is presented in attractive hangers, blotters and illustrated leaflets. On this page is seen an excellent cut of a field gate for farmers, for which there has been a large requisition. This is only one of the many special lines of the firm,

and another which is developing satisfactorily is readi-cut houses. They are shipped to all parts of Ontario and Quebec.

Gratifying Gain Made in Business.

A well equipped planing mill is conducted in connection with the retail yards. The accompanying diagram shows the layout of the yard and plant with the arrangement of machines, etc. The interior of the planing mill is well lighted and there is ample work space. Another feature is that the company maintains a convenient library for its employees, where the best trade journals and works of reference are on file and frequently consulted.

Manager Harrison states that through the aggressive publicity plans and practical service furnished a gratifying trade has resulted with the farmers in an otherwise rather quiet building season. New business has been created for the planing mill and the lumber yard.

Some idea of the varied lines handled or manufactured by the Guelph Lumber Co. is afforded, in its announcements, which state that, not only is first-class mill work provided and a quick service rendered, but that the firm deals in white, red and Georgia pine lumber, hemlock, spruce; culvert and bridge timbers and hardwoods; lath; shingles posts; tanks; interior finish; veneered and solid hardwood doors, white and Georgia pine doors; sash; storm doors; window and door frames; stairs, newels, rails and balusters; white pine and fir verandah columns; oak, maple, birch, white and yellow pine, and spruce flooring; Manitoba and double clap board siding; Georgia, white pine and all hardwood mouldings; beaver board—in fact all classes of interior and exterior woodwork.

The Freight Rate Increase on Lumber

The increased freight rates on Canadian railways will go into effect on August 12 and a number of important changes are made. In regard to lumber and other forest products, the order-in-council sets forth that a flat rate of one cent. per hundred pounds is to be added to the tariff in force prior to March 15th, 1918 (on which date an increase of fifteen per cent. became effective) and the rate so obtained is to be then increased by twenty-five per cent., but not exceeding five cents per hundred pounds, the increases since granted by the Board of Railway Commissioners to be disallowed. This regulation applies to the territory east of Fort William. It is stated that on an

average rate the augmented cost of shipping lumber will be about one dollar and a half per 1,000 feet, weighing 3,000 pounds.

On pulpwood the increase is twenty-five per cent., but is not to exceed an advance of five cents per hundred pounds.

The advance on cordwood, slabs and mill refuse for fuel purposes is one cent per hundred pounds.

On all lumber shipments in Western Canada from Fort William to the Coast the advance is twenty-five per cent. on the old tariff which prevailed previous to the fifteen per cent. boost which went into effect some months ago. This figures out about 8.70 per cent. higher than the charge—since the fifteen per cent. was added.

The new tariff which will prevail on lumber east of Fort William is practically the same as went into force on United States lines recently. One cent has been added to the old rate of one hundred pounds prevailing before March 15th last, and on top of this there is a jump of twenty-five per cent., which, in no case, as already stated, must exceed five cents per hundred pounds.

It is interesting to note that the class rate under which general merchandise is shipped has been raised twenty-five per cent. east of Fort William. The rate on coal to Toronto from Niagara Falls, Ont., has been augmented twenty cents per ton. This makes a jump from sixty cents to one dollar per ton within the past two years.

Another feature which will hit logging camps, is that the rates on sugar, syrup and molasses are increased by cancelling the existing commodity rate and applying the new fifth class rate and commodity rates, not specifically mentioned in the order, are to be increased twenty-five per cent.

The Canadian National Exhibition offices are sending out a handsome colored wall hanger bearing information relating to the main features of this year's exhibition, which is to be held from August 26th to September 7th, inclusive. At the top of the hanger, in large lettering, are the words "Produce and Save," which is to be the keynote of this year's exhibition. The illustration depicts "Miss Agriculture" sowing the crops. A panoramic view of the exhibition buildings is shown for a background. A great war pageant is to be produced in front of the grand stand in which 1,200 performers will take part. In addition to this spectacle there will be the usual attractions such as exhibits of manufactured products together with the agricultural products of the country. Special attention will be given to demonstrations of solutions of war time food problems.

Black and Fancy Pure Wool Mackinaw Coats, with high seven-inch collar, close fitting, with tab at throat. Sizes 36 to 46.

What Others Say

about the

"RETAIL LUMBERMEN'S TRAINING COURSE"

CANADIAN SUBSCRIBERS

"I must say that these are very interesting and prove very helpful in the course of the day's work." (Signed) J. E. Walker, Imperial Elevator & Lumber Co., Gravelbourg, Sask.

"I am very much pleased with the papers and feel that they just fill a long felt want." (Signed) McIlraith Lumber Co., Bengough, Sask.

"I think it would be worth several times the price." (Signed) M. J. Olson, The Lumber Manufacturers Yards, Edgeley, Sask.

"The Course is excellent and will greatly assist lumbermen in rendering service to their customers." (Signed) Chas. E. Walker, Manning-Sutherland Lumber Co., Round Hill, Alta.

"I consider your papers are fine and contain a great amount of useful information along our line of work and worth many times the price you are asking." (Signed) Wm. J. Mitchell, Hayward Lumber Co., Vegreville, Alta.

"I may say that I am highly pleased with your Training Course; it is something that will be helpful to one at any occupation." (Signed) E. Brown, Maguire Lumber Co., Earl Grey, Sask.

"Only a person of wide experience and knowledge has the information contained in the Retail Lumbermen's Training Course and no lumberman should miss the chance of taking it." (Signed) Geo. F. Twiss, Galvin Lumber Yards, Admiral, Sask.

AMERICAN SUBSCRIBERS

"Permit us to say that we think the instruction that you are giving in this Course is excellent stuff, and the results to the lumber business will be unbounded." (Signed) Julius Seidel, Julius Seidel Lumber Co., St. Louis, Mo.

"I want to say that I think this is a great thing to develop the ability of lumbermen and make them more useful to their trade and the community in general. I am well satisfied and think every retail lumberman and agent, especially men at the business, would do well to take it." (Signed) Geo. A. Zea, Bertram-Wright Lumber Co., Plummer, Minn.

"I feel I have gotten a great deal of good so far from the papers I have received." (Signed) H. M. Kramer, Walla Walla, Wash.

"I am sure this is a great thing for the Yard Manager." (Signed) Lloyd E. Brandt, Ireland's Lumber Yard, Eldred, Minn.

EDGINGS

Ontario

The Port Colborne Shipbuilding Company, Rexton, N.B., is constructing a large wooden vessel.

The Globe Casket Company, London, are remodelling and building an addition to their dry kiln.

The Shepard & Morse Lumber Company, Ltd., have been incorporated with head office at Ottawa, and capital stock of \$2,000,000.

Max Edwards, only son of Gordon C. Edwards, Ottawa, has joined the Heavy Siege Artillery for overseas service, and is now in training at St. John's, Que.

The Port Arthur Pulp and Paper Co. are completing the erection of a new slasher mill and are installing an up-to-date system of fire protection in their plant at Port Arthur.

A. J. Young, of the Young Lumber Co., North Bay, Ont., was at the recent session of the Masonic Grand Lodge in Windsor, Ont., elected a member of the Board of General Purposes.

Mr. and Mrs. Manley Chew of Midland, Ont., recently spent a few days in Toronto. His handsome home in that town was sold lately to James Playfair of Midland, who presented it to the Municipality for use as a hospital and convalescent home.

The Seneca Lumber Company, Ltd., has been incorporated with head office at Kitchener, Ont., and capital stock of \$40,000, to carry on business as manufacturers of and dealers in timber and wood of all kinds. The provisional directors are E. W. Clement and W. P. Clement.

The Searchmont Lumber Company, Ltd., has been incorporated with head office at Searchmont in the district of Algoma, Ont., and capital stock of \$100,000 to manufacture lumber, timber, lath logs, shingles and wood products of every description. The provisional directors are G. Grant, A. Dods, M. MacDonald, and E. Smily.

A recent despatch from Thessalon, Ont., says: There now exists the greatest log jam at the sorting jack on the Mississauga River in the history of logging on that stream. The jam is over three miles long, and it is positively asserted by experts that the stream will not be free this summer. Eight companies are interested in this timber. Two alligators are at work trying to break the jam.

In a recent serious fire which visited Pembroke, Ont., the factory of the Thomas Pink Company, manufacturers of lumbering and driving tools, was completely wiped out. The loss was a heavy one and came at a time when the firm was particularly busy. The Thomas Pink Company report that they intend rebuilding as quickly as possible their logging and tool factory and machine shop.

Mr. John M. Diver, recently manager of the C. & J. Hadley Lumber Co., Chatham, Ont., has severed his connection with that company, and has been succeeded by his son, T. Stran Diver. Mr. John M. Diver has established an office in the C. W. & L. E. Railway Bldg., Chatham, Ont., and will conduct a wholesale lumber business. As many of our readers know, he formerly was manager of the Cleveland-Sarnia Sawmills Co.

A by-law to raise \$20,000, being one-half of the estimated cost of altering and extending the property recently purchased from Manly Chew by James Playfair, and presented to the town as a hospital, was submitted to the ratepayers of Midland recently, but no person is yet prepared to say whether it was carried or defeated. Legal interpretation of the Municipal Act is being secured so far as the requisite number of votes is concerned.

The French Bay Lumber Company, a newly organized concern capitalized at \$10,000, has opened new offices in Sault Ste Marie, Ont. The officers of the company are F. J. Hathway, president; W. A. Herbert, vice-president; G. J. Pope, secretary-treasurer. The company will operate its mills at Garden River, and will cut timber on twenty-one thousand acres in Duncan township, which they purchased from the Garden River Timber Company. J. A. Normans is woods superintendent.

The death took place recently in Toronto of Mrs. Margaret Pearce, widow of the late Thomas P. Pearce, lumberman of Marmora, Ont., where the remains were taken for interment in the family plot. The late Mrs. Pearce was born in that village, being a daughter of the late Col. Campton of London, Eng. She is survived by two daughters residing in Toronto, and by three sons, William C., Frank S. and H. Reginald of the Pearce Company, Marmora, where they are engaged in the lumbering business.

As the result of wood cutting operations in Algonquin Park this summer, there will be a saving in Ontario coal consumption next winter of 40,000 tons. This is the estimate of Hon. G. Howard Ferguson, Minister of Lands, Forests and Mines, who has returned from a visit of inspection to the Ontario national park. Already 20,000 cords of wood have been cut, and before the summer is over 50,000 cords will have been cut, part of which is for the municipalities, and the remainder for Provincial institutions.

The plant of the Peerless Pulp Company at Thorold was destroyed by fire recently, the loss being two hundred thousand dollars. The building, containing the electrical machinery, as well as nearly all of a pile of four thousand cords of pulp wood, was saved. Five freight cars and a considerable quantity of pulp ready for shipment were consumed. The mill was built about twelve years ago by an American company and for the past few years had been leased and operated by the Foley-Rieger Pulp and Paper Co. of Thorold, who also conduct two other pulp plants there.

J. J. Carrick, ex-M.P., Port Arthur, who was awarded the Pic River concession in the Thunder Bay district, by the Ontario Government, over two years ago, with the right to cut pulp wood at fifty cents per cord, and the usual fees, on condition that he erect a million dollar ground wood pulp plant of one hundred tons capacity, announces that he will shortly commence operations. An adequate supply of power is now assured by the programme of the Hydro-Electric Power Commission, who will develop the water resources of the Nipigon river. Mr. Carrick is completing arrangements for the con-

struction of a large pulp mill at Port Arthur and New York interests are associated with him in the enterprise. He now operates two munition plants which require a considerable amount of electric power.

Eastern Canada

Fire recently destroyed the sawmill belonging to D. J. Buckley, Newcastle, N.B.

The International Shipbuilding Company are constructing a wooden vessel at Newcastle, N.B.

The sawmill belonging to Luc Martin, Ste. Anne Des Monts, P.Q., which was recently destroyed by fire, is being rebuilt.

The Bentley Shipbuilding Company, West Advocate, N.S., have started work on a wooden schooner of 500 tons gross.

Work has started by the Falmouth Shipbuilding Company, Falmouth, N.S., on the construction of a wooden schooner.

Grant & Horne, Courtenay Bay, N.S., are constructing two wooden steamers, the "War Fundy" and the "War Digby."

A. E. Hammond, Van Buren, N. B., is rebuilding his lumber mill recently destroyed by fire. The new plant will have a capacity of 53,000 feet per day. The loss on the mill and machinery was \$100,000.

On the recommendation of Hon. T. W. Crothers, Minister of Labor, the Cabinet has passed an Order-in-Council creating a Royal Commission to enquire into labor disputes in shipyards throughout the Province of Quebec.

The Bourbeau-Baril Lumber Corporation has been formed with a capital stock of \$20,000, for the purpose of manufacturing lumber and for operating timber limits, water rights, etc. The principal place of business is Makamick, P. Q.

The Drummondville Match Company, Drummondville, P.Q., have started work on the erection of a new match factory to cost \$10,000, to replace the one which was recently destroyed by fire. The general contractor is J. A. Nadeau, Drummondville.

The following have been nominated by the British Wood Pulp Association as members of the Advisory Council to the British Controller of Paper: Mr. C. Greenhalgh, Messrs. Greenhalgh and Co., Manchester; Mr. L. P. Andrews, Messrs. Andrews and Co., Ltd., London; Mr. G. A. H. Buchanan, Messrs. Becker & Co., Ltd., London.

The steamer "Concretia," the first genuinely concrete vessel to be built and launched in America was completed recently in Montreal. The boat made a maiden trip to Prescott and attained an average speed of ten miles an hour, the engines working perfectly. The "Concretia" is 126 feet long, 22 feet 6 inches beam, with a depth of 12 feet 6 inches.

According to word received from the Department of Lands and Mines of New Brunswick, previous to May 1st, 1918, the timber license holders of the province had the right since 1916 to ship pulp wood to the United States in accordance with legislation. The law is prohibitory at the present time and does not permit of pulp wood cut on Crown lands of the province to be exported to the American market, with the exception of poplar.

It is understood that the St. John Drydock and Shipbuilding Company has secured from the Hon. F. B. Carvell, Minister of Public Works, an assignment of the old Norton and Griffith Company, Limited, contract for the construction of a drydock and ship-repairing plant at Courtenay Bay, St. John, together with certain improvements in the way of dredging, etc., in the harbor of St. John. It is expected that work on the new drydocks will be commenced within thirty days.

Louis I. Matts, 351 Oliver Ave., Westmount, Que., who had been in failing health for about a year, died suddenly at Old Orchard Beach, Me., recently. He came to Canada from Russia about forty-five years ago and located at Buckingham, Que., where he worked up an extensive business. He was also interested in the lumber trade of the Ottawa Valley and owned a large farm and cheese factory at Ferme Neuve, Que. Mr. Matts leaves a widow, three sons and four daughters, one of his sons being at present with the British forces in Mesopotamia.

There are about twenty-five schooners under construction along the shores of St. Mary's Bay, N.S., and all within a radius of twenty miles. The new tonnage being built there calls for the expenditure of nearly one million dollars for labor and materials alone. The largest vessel on the stocks is at Metaghan, being built by Dr. T. W. McDonald, who has his brother, W. S. McDonald, of New Glasgow associated with him. This vessel will register 1,100 tons, is 221 feet over all, 40 feet beam, and 19 foot hold. By far she will be the largest sailing ship yet built in Nova Scotia during the era of ship building.

Western Canada

The Beaver Cove Lumber and Pulp Company Ltd., Beaver Cove, B.C., are starting work on the erection of a pulp mill.

A. W. Keith, Port Coquitlam, B.C., has plans in progress for building an addition and improving his present woodworking plant.

The Vancouver Cedar Mills, Ltd., Dollarton, B.C., formerly Roche Point, have plans in progress for alterations to their sawmills to cost \$4,800.

An area of over two thousand acres was burned over in Columbia Valley, Cultus Lake district, which is situated south of Chilliwack and across the Vedder river, by a forest fire that raged furiously in the brush.

The International Timber Company, with head office at Seattle, Wash., U.S.A., recently lost their lumber camp and two logging engines at Campbell River, B.C., by fire. The engines were completely destroyed and the loss is estimated at \$70,000.

The Kuyouquot Logging Company Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$10,000, to carry on business as timber and lumber merchants, sawmill, shingle mill and pulp mill owners, loggers, and to export, import and deal in saw logs, poles, timber and lumber of all kinds.

Hon. John Oliver, Premier of British Columbia, was in conference with the Cabinet recently at Ottawa, and an arrangement is being effected for the extension of the Canadian Northern Railway from Victoria, seventy miles north along the coast. The line is graded, and the provincial Government, which has the rails, offers them to the Government so that work may be gone ahead with this season. They would be paid for later.

How Camp Supplies Prices Have Risen

The Increase on Leading Food Commodities Since the War Started is Considerably Over 100 per cent.

The feeding of men in the lumber camps is one of the most vital and perplexing problems which woods operating companies have to face today. The cost is steadily ascending and the question naturally arises, where will the elevation end.

Not only have the figures for all lines of supplies been augmented alarmingly since the outbreak of the war, four years ago, but wages of lumberjacks have increased in proportion. Even with the attractive figures that are now being offered, ranging all the way from sixty to seventy-five dollars a month, board, and the payment of railway fares to the scene of operations, there is not an abundance of help in sight.

The present prospects are that there will be fewer camps in commission this winter than last, and the number of men in each camp will be smaller. The cut of logs last year in Eastern Canada was only from sixty to seventy-five per cent. of what it was the year previous, before the help problem became so acute. From what is heard on all sides there will be a more limited take-off of timber this year than during the past winter. The men cannot be secured. Munition plants, shipbuilding and other outside and inside jobs afford a more liberal scale of wages. There seems to be a strong disposition on the part of manual labor to pick the easiest and most remunerative berth available, especially if they can earn good money and reside in the cities or larger towns. Woods operations—the manning, provisioning and equipment of the camps—cause many a concern at the present juncture worry, annoyance and speculation.

When it Cost Just a Quarter Per Day

Old-time operators are inclined to look back to the palmy days of twenty years ago when all the men desired could be readily obtained for logging at ten to fifteen dollars a month and keep, which averaged from twenty-five cents to thirty-five cents a day. Now it costs fully these figures to provide a single meal. The wooden bunk and the straw tick are passing, and in their place come steel beds, mattresses and springs. There are many other improvements in the conditions and equipment surrounding camp life, yet men are not forthcoming, and more complaints are heard than ever. For the most part these are totally uncalled for and altogether unjustifiable. Word comes from Ottawa that only the other day a party of Austrians employed in a Northern Ontario camp threatened to "grub strike," as they call it, because the company attempted to put in force the regulations of the Canada Food Board applicable to public eating houses. The Dominion police were requested, at the instance of the Food Board, to investigate the case, and it was found that the men were receiving sufficient wholesome food and that their only grievance was the adoption of the Food Board regulations. The police cautioned them to continue their work or be promptly interned. The warning was effective and the "grub strike" did not materialize. The men have now settled down to work, and perhaps there will be no further trouble.

Disposition to Find Fault Incessant

This incident indicates the disposition of a certain class of men to find fault and institute all sorts of kicks. The better some employees in the woods are used the more dissatisfied they become, and the greater agitation they attempt to stir up. Two or three grouchers can do much to leaven a whole camp with a spirit of unrest and censure and breed discontent generally. Yet companies have to put up with this sort of thing today in view of the scarcity of help and the absence of experienced woodsmen.

Speaking of the daily cost of feeding men in the camps one leading lumberman states that ten years ago the average outlay, not counting the wages of the cook, cookee or clerk, was twenty-five cents per head; four years ago it was thirty-five cents per head, and now it runs to eighty cents. Another logging exponent stated that the cost was forty cents a day when the war broke out and now the men in his camps cannot have their appetites properly ministered to for less than eighty-five cents. Others place the estimate at one dollar per day when all

overhead disbursements are taken into account. It is generally agreed that this figure is not excessive. To go minutely into detail regarding the increased cost of each item on a bill of fare would entail a too lengthy review. Only a few leading articles can be quoted for purposes of comparison. It may be stated, however, taking the figures for July, 1914, just before the outbreak of the war, and comparing them with the cost of similar commodities for the corresponding month in 1918, advance is all the way from seventy-five to two hundred per cent. The average is probably about one hundred and twenty-five per cent., while the wage of the ordinary lumberjack has more than doubled.

It does not require a mathematician or a statistician to comprehend what the logging organizations are up against today and still the end is not in sight. The expense is mounting all the while and will probably continue to do so until the termination of hostilities in Europe.

In regarding the rationing regulations as applied to woods operations by the Canada Food Board, this phase of the question is ably dealt with in another article in this issue and requires no comment here. The lumbermen will co-operate whole heartedly and unitedly in assisting the authorities in every way in the conservation of food and supplying the boys in the trenches with all that can possibly be saved at home by a policy of economy and system, and the adoption of uniform and efficient methods.

The Quotations Before the War and Now

It has been stated that the use of substitutes should in every way be encouraged and practised.

The lumbermen are doing their part in this propaganda but even the price of all lines of substitutes come very high. For instance, Klim is largely used in the place of milk, and the figure for this has recently been increased. The small size case, containing forty-eight one-quarter pound tins, is now \$5.25 per case, f.o.b. Toronto; the twenty-four one pound tins \$7.50 per case, and the six ten pound tins \$17.50 per case. The price before the war was 25 cents per pound and now it is 40 cents.

Take long clear bacon, for instance, the price, according to July figures, is from thirty and one-half cents to thirty-one and a half, while previous to the unpleasantness with the Huns the same commodity sold at twelve and a half and thirteen cents.

Other comparative prices on certain lumbermen's supplies as furnished by leading firms show heavy increases. The figures tell a story more convincing than any other means of presenting the facts and are as follows:—

	June, 1914	June, 1918
Barrelled Pork Reg. Mess	\$26.00	\$54.50
Short Cut Back	28.50	58.50
Clear Fat Back 85/100	24.00	57.00

Will Observe Food Regulations

The Proposed Quantities are Ample for Requirements of Men in the Camps

By Wm G. McKay, Madawaska, Ont.

Conditions in the lumber woods have very much changed in the last year or two; in fact a very great difference has come about since last year and the lot of the foreman of camp, superintendent of works, is not a bed of roses. The most that affects the foreman is the class of labor; the superintendent, general conditions.

The food rationing has not as yet been put in force by the Food Board, but I understand will be in the near future. It is not possible to say how the regulations will work out.

I have before me a copy of the proposed regulations, and from the quantities allowed therein they should be ample for the requirements of the men. I have not been feeding a greater quantity, and most of the lumbermen are, I believe, on about the same basis. The only difference may be in the manner of apportioning the quantity, either by the meal or per day.

I believe that the general opinion would be to allow so much of each kind of food per day to be used, and leave it to the different branches as to how it shall be used, so long as the quantity consumed does not exceed the regulations in force by the Food Board. You know all are ready to do anything possible to meet the wishes of the government apart from any formal regulations.

The labor problem is a serious one. Not only have wages increased rapidly but the class of labor that at the present time is available is very much inferior to that of even two years ago. A great many are advanced in years. Men who were once good are not able to do the same amount of work in a day that they formerly did, and this brings the lumbermen up against two items of cost—higher wages and less production per man. Until a certain period of time has passed it is hard to estimate the extra cost from the latter cause.

I would not anticipate from present indications that the work in the woods will be anything like as extensive as last season. After the harvest, threshing and general farm work is through in the fall, there may be more men of a better class, but that is late for logging being about the first of November.

In my case here where I generally had half of my crew of good local men, mostly young fellows, I have this season so far comparatively few; in fact there are no local chaps to be had—all the young men, of military age and fit, are in khaki, and the older ones are working the farms.

Boarding Costs Go Up 40 Per Cent.

"In regard to camp feeding costs, last winter's board cost us just 40 per cent. more than the previous year. The exact costs would not be useful for general information, as in both cases the bulk of our supplies went in the winter preceding our operations. The cost should be based on replacement values at to-day's prices," says D. McLachlin of McLachlin Bros., Arnprior, Ont., who adds: "We used several substitutes experimentally and found that oatmeal was the only one that was really effective. We have farms at all our depots and grow potatoes in sufficient quantities to serve them at all meals; also carrots, turnips and cabbages to vary the diet and avoid monotony. The pigs at each camp give a change to fresh pork several times during the season.

Can Piece Work in Woods Come?

It Would be Preferable to any Other Plan for Getting Results from Men if Generally Adopted and Systematized

Writing to the "Canada Lumberman," George H. Holt, of the Holt Timber Co., Chicago, who also conduct large operations in Ontario at Bolger Bridge, says in regard to the payment of men in the woods by piece work and the plan of allowing them to board themselves. "I am sending you a letter which I have just received from my brother, William Arthur Holt of Oconto, Wis. He mentions some of the difficulties which have cropped up and also notes a possible development in the way of a different bill of fare for the camps. The trouble with allowing men to board themselves only comes in case they work near a camp of the company. The number of men fed in a camp plays an important part in the cost of boarding them per person, mainly due to overhead, and when a part of the crew "batches" the number, who share the expense of labor, fuel, etc. is reduced first that much and the per capita cost goes up. It is perhaps unwise to charge too much for board because the men will want to "bach" to save money.

George H. Holt, Chicago, Ill.

"I do not think that the cost of feeding a man in the camps, if placed at ninety cents a day now, is too high, and the men can earn more by working than by cooking. Piece work is, of course much preferable to day work if the price can be standardized and be generally adopted. The experience of lumbermen in the United States on this question would prove of much value if properly recorded and co-ordinated. I have suggested to the Food Controller that it might be possible to let a contract in a large way to responsible people who would organize the necessary forces and operate cook houses at a stated price—say ninety cents a day, supplying a government approved set of bills-of-fare, quantities, etc. If lumbermen are left to work out a scheme individually and disconnectedly, as has been suggested, it will be a long time before anything like uniformity and efficiency are attained and I believe that in this conclusion you will agree with me."

How it Works Out in Wisconsin.

The letter from William Arthur Holt, of Oconto, Wis., is as follows: "I think that all the lumbermen in this vicinity are desirous of getting their help on a piece work basis as far as possible. So far it has been rather unsatisfactory for the reason that none of us is familiar with it, and the prices paid vary too much. For many years nearly all of the cedar has been cut by the piece and most all of the bark has been peeled by the cord, so that there is no trouble about that. The men either board themselves or are boarded at the company camps. In the latter case they are charged all the way from \$6.00 to \$7.00 a week board at the present time.

"We have had considerable railroad work done by the piece. We paid last year, for instance, \$12.00 a station to cut and grade the railroad right of way through the woods. We have had a proposition to do the same work this year at \$20.00 a station, but have declined it. The cost of laying steel and picking it up again shows a tremendous variation between different companies. No doubt those who have a good gang and are getting it done by the piece are accomplishing the work with the force which they have, whereas if they were doing the work by the month it would probably take twice as long to do the same work. One of the difficulties about it is that the good men want to work by the piece and they will not take a job where the timber is scattering or the cost of doing the work is excessive. They want to pick out all the good places and the result is that the camp has to put in monthly men to clean up the edges and the monthly men are, as a rule, very inferior, so that the piece workers get a big thing out of it, and the balance of the work costs more than it should.

Piceworkers Make Liberal Money.

"If we ever get it systematized so that the logging superintendents and foremen know what we ought to pay and how to let jobs, it will work out very satisfactorily. In fact, I consider it the only solution of the labor difficulties. We are very desirous of putting the same

system into our various mills, but conditions there are such that I have never known of anybody yet who has been able to figure it all out at a fair basis, and it is being done only in a limited way. I think the piece workers generally are making from 50 to 100 per cent. more per day than the monthly men, but even at that the work is done, and usually for considerably less money than if it was executed by the month. We have a bunch of men who have been working for us piece work for several years who are very efficient and earning big wages, but they are heavy drinkers, and when they make a stake they go out and spend it. These men insist upon boarding themselves and I understand that they buy for their own table some things which we do not furnish in our camps. They say they want the best there is regardless of cost, as that is all they get out of it anyway.

"We do not think that they save any money by boarding themselves, but they claim they board more to their taste. There may be a suggestion in this, as to the furnishing of our own supplies."

The Difficulties in Securing Proper Help

By C. H. Goodhand, Lindsay, Ont.

So far as woods operations are concerned, things are not the brightest or most promising just now. Last fall I had to build a set of new camps and I made them warm and comfortable. I had a first class cook. We paid good wages and gave the men the best of board, and even then they would not remain for any length of time. The majority were coming and going most all the while. It seems impossible to secure the same class of men that we had a few years ago. I can scarcely get good cant-hook men or expert sawyers at any price. After New Year's, when I did get a very fair body of lumberjacks together, the Military Service Act came into effect and called some of the best that I had and it was very difficult to replace them.

I act as foreman in the sawmill during the summer and have under me about seventy-five men when I can get them. The help problem gives us a great deal of trouble, for there is a certain type that will work only until they get paid, and every few days some of the best hands get notice to report at military headquarters, and this keeps us breaking in green labor all the while.

In regard to the payment of men in the woods by the day plan and charging them so much for their board, this proposition has never been tried in this district, but perhaps it might work out all right. If it was too stormy to go out in the bush the men would have to pay for their own keep that day instead of the cost falling on the operating company. I am of the opinion that the day labor basis is at least worthy of a trial.

The outlook for securing sufficient men for the camps this fall is not rosy, and the class available is not as efficient or productive as in years past, but we have to face conditions as we find them, and do the best possible under existing circumstances. The war has upset all things industrial, and in this respect the lumbermen and logging operators have been experiencing the same difficulties and setbacks as other lines of enterprise.

Cutting and Skidding by Piece

The Best Method for Taking out Logs that Can be Employed at the Present Time

By Geo. B. Nicholson, M.P., Chapleau, Ont.

During the winter of 1916 and 1917 we had two large camps taking out logs on the same water, the camps being situated within three miles of each other. These camps had an average of 125 men to the camp and they took out 220,000 pieces. During the season just closed we had the same two foremen in very much the same situation. As a matter of fact one of them was in the same set of camps. These two camps had an average of 85 men to the camp, or about 35 men less in each camp than the former season, and the output of logs on a piece work basis from the two camps, was 235,000, or 15,000 more logs with an average, say, of 170 men than was taken out the previous season.

This, of course, applies only to the cutting and skidding. We were not able to work it on a piece-work basis in connection with the hauling. This did not involve a saving in cost proportionate with the saving of men, for the reason, that we were taking men on the piece-work basis, and each individual man made the extra money. The point is that it enabled us to get an amount of work done that otherwise would have been impossible in the face of the present shortage of labor.

Now, with regard to the method of working this system out. In the first place it involves very much more work on the administrative side. It is absolutely necessary that both the foreman in charge of the camp and the walking boss know thoroughly what each part of the cut is going to turn out, and have a sufficient amount of common sense and executive ability to map out his work and fix the price for

the different parts of the cut that will be equitable, having in mind the amount of timber and the nature of the country.

I do not think that piece-work on the basis of a fixed price per thousand feet is feasible, for the reason that it is impossible to get piece-work men who know anything about culling logs. We simply took the average of our 1916-1917 cut of logs and assumed that the 1917-1918 cut of logs would produce approximately the same amount of lumber. We figured and apportioned the lots as between the cutting and skidding, cutting of main roads, overhead charge and sleigh hauling, and then determining the average price per log we could pay to the men who did the work of the cutting and skidding, we furnishing the horses and the men doing all the work.

The men paid for their tools such as axes, saws, files, axe-handles etc., and paid for their board in the regular camp. I am convinced that a careful, consistent trial of this method of taking out logs will show that it is the best that can be employed at the present time.

Government Should Regulate It

The Necessity of Keeping Up Labor Production in View of the Increasing War Demands

By James Ludgate, Parry Sound, Ont.

To refer in detail to logging costs, prices and supply of labor is quite a large order. It makes me feel very much as did the inexperienced cockney who came from the isle across the sea to make his living in Canada. His first job took him to the bush, where he was given an axe and told to fell certain trees. Naturally he was awkward at it, much to the disgust of the foreman, who asked: "Which direction is the tree going to fall?" The cockney looked at the foreman in surprise and replied, "How should I know; I'm no bloody prophet." We all feel about the same way and are loath to predict or even guess as to future expenses, excepting, however, to venture a statement that all costs will continue to rise unless properly controlled by government authority.

James Ludgate, Parry Sound, Ont.

The lumbermen are really having a hard time of it in Canada. The heavy recruiting of Forestry Battalions has taken nearly all the experienced lumberjacks, so we must depend on a few culls and a few farmer boys, who normally go to the bush for the winter months. These are our experts. For the common labor we must take our chances with the factories and other large plants, picking up a few foreigners; but as the cities can offer more attractions and diversions than the lumber camps, we must be satisfied with the left-overs, each one of whom now imagines himself a prince, must be fed on delicacies and must not be offended. I figure it costs twice as much to produce logs now as it did four years ago. You know the price of lumber has not doubled, so you can easily figure where we are getting off at. Lumbermen being born optimists will continue to hope for good business some time in the future.

Introducing More Variety in Menus

Naturally the lumberjacks won't like the rationing regulations, or indeed, anything that affects their stomach. It will make them more dissatisfied and cause them to jump from camp to camp and float more than ever. We are trying, by introducing more variety, to make the men feel satisfied. As the work is strenuous and there is lots of fresh air, these men should get sufficient food for their needs. We hope to convince them of their duty to our boys at the front and get them to eat what can't be shipped overseas.

I believe that the government should lend a hand in the matter of camp labor supply, as the American Government has done in the lumber producing centres of the West and South. Our war activities in the way of the production and the handling of munitions and food, the building of ships, camps, etc., cannot go on without consuming great quantities of lumber. Now that our friends, the Americans, have thrown so much energy and capital into the production of ships and munitions, thus eliminating so large a proportion of their lumber producing labor, plants and organizations from normal activity, we Canadians on this side of the line should do our best to foster the production of lumber to supplement and bring to normal the output

in North America. Of course, we have been getting along fairly well so far because of the small amount of residence building. But this condition will soon change, not only in Ontario, but in North America generally. People must have houses to live in. They cannot go on doubling up indefinitely, as residence building has been sub-normal for many years, and this state of affairs will soon become acute.

I am told that 65 per cent. of the lumber produced goes into shell boxes. The increase in the use of boxes is clearly reflected in the remarkable advance in price of the lower grades of lumber. This, again, shows a scarcity and that the use of lumber goes hand in hand with the production and shipment of munitions, for undoubtedly the increase in box production is caused by our war activities.

Lumbermen expect and should get some help from the government in the labor problem. We won't sit down, of course, twiddling our thumbs, waiting for government assistance. We will continue to hustle and play the game as hard and as well as we can, hoping optimistically, as usual, for the day to come when our troubles are over and we can go fishing in Florida during the winters and let "George" get out the logs in Ontario.

Work of Georgian Bay Lumbermen's Association

The Georgian Bay Lumbermen's Association was founded a number of years ago by manufacturers in this great timber producing district of Ontario to consider all subjects of mutual interest or that have a direct bearing on the conduct of woods operations. W. E. Bigwood, of Byng Inlet, is the president of the association, and A. J. Jordan of Sudbury is the secretary. Any time that it is necessary to get together for the consideration of some important problem, or to render a decision on any matter that comes up, a special meeting is called at some convenient point. There questions are threshed out, and the views of all concerned presented in a free and informal conference. The association has never been very much in the limelight as its officers prefer to do their work quietly and effectively. All undertakings are carried out in a business-like manner. One of the most important meetings held of late months was that to consider the new rationing regulations about to be put into effect by the Food Controller's Department of Ottawa. The problem was thoroughly discussed and, after an expression of opinion from all present, every evidence was manifested to act in sympathy with the campaign of economy and conservation in meats, sugar, fats and other articles of diet.

All the lumber men of the Georgian Bay district are ready and willing to co-operate to the fullest extent with the Federal authorities in observing any mandates that may be laid down for the saving of foodstuffs. It was the expressed desire of every member of the association that everything possible should be done to assist the Canadian Food Board in its propaganda in order that victory might rest with the cause of the Allies. The lumbermen realize their personal duty and individual obligation in this matter, as far as the management and administration of logging camps is concerned, and will see that there is no waste in food products. Everything feasible is being carried out in the way of conserving all that can be done to provide "our boys at the front" with ample supplies so that they may win the great fight for liberty and democracy and witness the triumph of those principles which stand for all that is best, most enduring and progressive in the struggle for human freedom.

What Canadian Lumbermen's Association Stands For

Writing to the "Canada Lumberman" a charter member of the Canadian Lumberman's Association, pays the following brief but appreciative tribute to that body:

"Whatever the C. L. A. is, or whatever it has accomplished, or failed to accomplish, there it stands. The only reason for its existence is to be of service and value to the members of the association particularly, and to the public generally. Service and co-operation were the guiding principles which the founders had at the beginning, and these principles are more emphasized to-day than ever they were before. There is nothing more to the Canadian Lumbermen's Association than this.

"The work that has been accomplished during the ten years of its existence is a matter of record contained in the annual reports of the association. As the policy of the association in conforming with the policy of the lumbermen themselves is to look forward and not hark backward, it is conceivable that the Canadian Lumbermen's Association will continue, and it is to be hoped, improve as the years go by. The earnest endeavor from the start has been to give adequate and satisfactory service."

Portable Houses Not Used for Logging

In regard to the demand for portable houses this has been considerably greater this year than formerly owing to the numerous uses to which these buildings are placed. The war has no doubt been responsible for the increase, as a large number of buildings are being used for army purposes and for subsidiary purposes as well.

One leading Ontario firm say: "We are not aware of any lumber concerns using these structures in their camp operations, but believe they use the regular shack which can be erected much cheaper from material they have on the ground. A large number of munition workers, mines, and other plants are employing these buildings to house the foreign element which they have working in their factories. We believe that the main use for these structures will be as formerly, for summer cottages at resorts, etc."

Camp Car Idea is Working Out Well

In regard to the camp car idea, illustrations of which are shown on this page, W. W. Warren, general manager of the Snoqualmie Falls Lumber Co., Snoqualmie Falls, Wash., writes the "Canada Lumberman" that they are quite well satisfied with the camp car plan so far as they have carried it out. He adds:

"It is convenient and for long operation will prove the most economical. The quarters are appreciated by the better class of men, but there is a type in the logging camps of this country that even though they get the chance are not going to appreciate Paradise. However, we still feel there is enough good left in the personnel of the entire crew to justify giving them consideration and perhaps some day this element will awaken to the fact that one of the best things they can do is to assist in kicking off the job the class of men that preach discontent and trouble.

"We have two of these camps known as Camp "A" and Camp "B," each of which consists of twelve cars; most of these cars are 14 feet by 60 feet. There are five bunk cars, thirty men per car, or ten men per room. Two dining cars, a kitchen, a commissary with a reading room in one end, an office and store car, a shop and power car and a car containing shower baths and a drying room.

An interior view of logging camp on wheels, showing the kitchen equipment.

Moveable camp car, giving glimpse of comfortable sleeping quarters of the men.

Why All Lumber Camps Are Being Rationed

The Necessity for the New Regulations Governing Each Worker and How Food Conservation Will Be Effected Thereby

By Ernest B. Roberts, Canada Food Board, Ottawa

Why should special measures to save food be taken in lumber camps? Should rules in their case differ from those in other industries? These would have been very natural questions before the war. Now, however, we have had four years of warfare and somehow the onus of our faith in so many pre-war ideas seems changed. To-day it is for the lumberman, employer or employed to show cause why he should not save food, why he should not come under the rigid rules to which every one is conforming. Of course, a superficial objection will be promptly taken that a lumber camp has peculiar conditions. Perhaps every individual, hotel, restaurant and lunch counter keeper whatsoever could legitimately claim some sort of exemption because of "peculiar conditions." No two businesses, any more than two human faces, are exactly alike.

The lumberman may be assured that he will not be asked by the Canada Food Board to undertake anything which differs in principle from what every one else in the Dominion is sharing. The methods of his food supplies, as they have grown up by a century of trade custom will be properly safeguarded. As a class, the lumbermen are not likely to ask for more than such adaptations of the larger plans than will meet their mode of life in camp.

All of which amounts to this; the lumbermen, like anyone else, is a Canadian whose first duty under the compulsion of war is, partially at least, to change his habits so as to share his food supplies with those who are sharing unspeakably more than food with us.

Will Obviate All Careless Methods.

No one in the lumber trade, great or small, would seriously question that much food saving can be advantageously carried out in our Canadian camps. The quantities of food bought and eaten are great. The fact that the food is "found" by the boss, and the necessity for avoiding "meanness" in supplies if men are to be kept content for months on end, leads to a certain laxity in control and to careless methods of food management.

Lumber camps have not reached the prevention of waste in the same way as say, the dining rooms in industries, such as factories and stores. Yet no one would say that the lumber camp is of more national importance to-day than is the munition factory, whose workers come under the food rules which govern public eating houses.

We have Mr. Lloyd George's own revelation that Canada to-day has provided the Allies with fifty-five million shells and forty-five million cartridge cases. All the workers making these are under controlled food conditions. Even the most remote farmer in the land is indirectly controlled through the miller; and the lumberman cannot claim to be of more national value to-day than the farmer.

Life Lead Simplifies Rationing Scheme.

One might leave out of consideration the argument for the necessity of food saving. That is beyond argument or persuasion now. It is an axiom of our national life—one which is still considerably honored in the breach. One might, however, come directly to what proposals should be made for these busy hard-working camps, far from access to the wholesale warehouse or the retail stores and perhaps beyond good or evil in food speculation. The first consideration is that the barrack-like life simplifies the rationing scheme. One should perhaps rob the word of its terrors. Rationing only means a measured quantity of food. It is not necessarily less than the individual used to receive before, though it rarely runs to the other extreme of being too generous. Every lumber camp is now run on a system of allowances per head; sometimes counted for weeks, sometimes for months, according to the facilities there are for replenishing the stock. Now call that allowance by its military name of "ration" and the change is made. If we reduce it to a weekly basis we are down even to all that the Food Board plans propose. Simple, is it not? Is any camp owner, manager or worker likely to "kick" at a change largely verbal in its form?

No rules have ever been framed or projected which can be called hard and fast. The following table gives an outline of what has so far been under discussion; it is subject to all sorts of changes before it may be even officially issued, but it indicates a line along which action may be taken. It is a daily allowance for every lumber camp worker:

Pork (March-October)	1½ lbs
Beef (November-April)	1½ lbs.
Standard flour	12 oz.
Non-wheat flour	4 oz.
Butter or oleomargarine	1½ oz.
Lard or substitute	1½ oz.
Sugar	3 oz.

The following shall rank as equivalents for half a pound of beef or pork (not to include ham or bacon); three ounces of ham or bacon with two eggs; six ounces of breakfast ham, bacon, poultry, veal, eggs or cheese; eight ounces of tongue, heart or kidney; ten ounces of venison or flesh of wild animals, or of wild fowl.

The intention is that these rules should apply wherever there are ten persons employed in logging or in subsidiary occupations. Where more than one hundred and fifty people are served the plan recommended is that of the "Self serve" eating house. This self-helping, it has been found, actually helps to save food. There is a psychological reason. It brings home to the individual the thought of how much he is eating and how much he really requires. Only one dish of meat, fish or game should be served; while, of course, no beef, veal or pork will be served on Wednesdays and Fridays, our so called Canadian meatless days.

Use of Fresh Fish Recommended.

Wherever possible the Food Board recommends that fish be served, especially fresh fish, and no bread must be served unless twelve hours old. The rule against the baking of dough-nuts, crullers and waffles cannot be broken and the city restaurant rule of no sugar bowls on the table must be observed.

But to meet conditions in those camps which are twenty miles or more away from transportation facilities and where substitutes are not available exception to the meal rules will be granted. No exception, however, will be made to the general law which makes the manager, owner, or any other person who handles food responsible for any waste committed. No rubbish shall be thrown into the garbage can because it must be used where possible for food products, and in camps where more than twenty-four persons are fed it will be obligatory to keep pigs or poultry to consume or utilize the camp waste—a by-product which is likely to accrue to the advantage of the owner and the men.

Camps Must Take Out Licenses.

Lumber camp eating places will be required to take out licenses running from \$2.00 per year, where there are under twenty persons served to \$20.00 per year for camps of one hundred or more.

No food can be bought by camp managers from other than licensed wholesalers, and the system of book-keeping must be sufficient to show, if required, where and how this food was secured.

It may be argued that the lumber men should be exempt from some of these rules, but so long as the lumber camp is a commercial undertaking, there seems no moral rules by which, simply because of difficulties inherent in the calling preferential treatment should be given. What is sauce for the goose in the city, should be sauce for the gander in the "back-woods." The lack of food by the Allies would affect the prosperity of the one as quickly as the other. On the general issue of whether Canadian lumbermen will take up a regulated schedule of food with heartiness there can be no doubt. The lumbermen have shown by the number of voluntary enlistments that they are as ready to grasp a war created situation as any other industrial class, and their patriotism in this step is not likely to be called in question.

The Anthony A. Berrie Lumber Company, Limited, has been incorporated, with head office at Vancouver, B.C., and capital stock of \$20,000, to carry on as a going concern the lumber and mill business now carried on at New Westminster and Warwhoop in B. C., by Anthony A. Berrie; to carry on business as timber and lumber merchants, sawmill and shingle mill owners, loggers, and to manufacture and deal in saw logs, shingle bolts, timber, lumber and wood of all kinds.

Let us supply your Camp Provisions

WE make a special feature of supplying Provisions to Lumber Camps. We know just what you want—how to pack it and how to ship it, so that it reaches you in good condition. And our Prices are the lowest we dare quote for strictly high-class goods. Try us for—

Fresh and Frozen Meats

Long Clear Bacon

Barrelled
Beef

Barrelled
Pork

Pure Lard, "Peerless" Shortening (the very thing for camp cooking), Smoked and Cured Meats and "Peerless" Pickles—"The Pickles that Tickle the Taste."

We are now in the Beef Business

—and are in a position to supply you with **FRESH** or **FROZEN BEEF** of the choicest quality at lowest market prices. Carefully packed and shipped. Get our Prices—to-day.

Write or wire us (at our expense) for Quotations

Paying Lumberjacks on the Daily Wage Plan

Is Present System Cumbersome and Unsatisfactory?—New Method Would Afford Better Control of Working Force and Create Greater Efficiency

By "The Camp Operator"

Considering new methods in meeting the labor problem at the present time naturally arouses apprehension on the part of the average lumberman, especially those who carry on woods operations. Conditions are steadily growing worse, owing to the shortage of help, the rising cost of wages and maintenance, and the general restless attitude and independence of labor which has been engendered by the war. We hear a great deal about efficiency and co-operation, and the problem just now is to adopt the most modern methods in our camps.

This naturally brings up the question of what is the most satisfactory way of paying men in the bush. I have given some time and thought to this end of the business, for as every employer of labor knows, the wage item is the biggest single expenditure that has to be met in all industrial undertakings. It is easy to sit down and theorise or to indulge in speculation, but cold, concrete facts are what the average, practical man desires.

It seems to me—and I am no socialist or revolutionist—that the most satisfactory method of paying camp labor under the present abnormal conditions would be by the day and charge the men so much for their board, the same as is done at our sawmills. This plan has been tried in logging in the southern and certain western states and has been found to work out admirably and equitably. Of course, it may be contended that conditions are not the same there as in the Dominion, and that where the new regulation has been found so successful that camps are of a permanent character and woods activities a fixture, such as is impossible in the Dominion with the constant disappearance of the timber and the removal of base of operations farther inland.

Disadvantages of Hiring by the Month.

Take the old system of paying men. It seems to have entrenched itself in the very nature of the lumbermen's calling. Railway fares are paid to the point of destination, so much is promised each man per month and his board is thrown in. Of course, when the days are exceptionally stormy or rainy, the men in the camps cannot operate and they do not secure their wages for that day, but the company has to feed them just the same and stand this portion of the loss.

Take 100 men and say that the average cost of boarding each man is 75 cents a day, and this does not include the wages of cooks, cooks, etc. To board 100 men costing on the average of 75 cents a day, during the winter season, when it is found that there are about fifteen days on which they cannot work, means a total outlay for a camp of this size of over \$1,100. The company has to meet this in covering the periods on which no labor is performed.

Now there are various ways of securing men, one of which is through employment agencies and employment bureaus. I have seen bureau men send a party of foreigners off on the train, bound for a certain camp and, going among the leaders of the gang quietly insinuate "Well boys, if you don't like it up there, come back and I will see that you are fixed up elsewhere."

The lumber concerns lose hundreds of dollars each year by advancing fares to men who, after they get to the camp, jump their jobs and pass along to some other scene of operation. Possibly they had been offered a little better inducements by some competing concern, and anyway the class of labor one secures in the woods is largely of a nomadic character.

Losses Through Men Jumping their Jobs.

Another point, besides being minus railway fares—we find that every spring about 10 per cent. of our woollen blankets have disappeared. This is another loss and when the day of settlement comes there is frequently a dispute between the time clerk and the men as to the number of days actually put in. Perhaps a fellow has been ill part of the day and seeks to collect payment for full time. Now the reason I advocate day labor is that I believe it would give us better control over the men, put things on a sounder and better business basis and enable us to grade labor according to its skill and to classify it more scientifically. Lumberjacks would be more anxious to work at certain times if they knew they were paying for their board which, I contend, should be given to them at practically cost. No logging camp operator would want to make any money on boarding men, and, at the same time he desires to see that the number of free

meals (which are secured at the present time by fellows who are leaving camp, but somehow manage to remain over Sunday), are all paid for. As it is now many a chap gets several meals after he has ceased work for the firm. If we had the day labor system instead of so much per month, each employee would be held responsible for all supplies, such as blankets. We allow three pairs to a man, and they cost from \$5 each, whereas they were formerly about half this figure. Other supplies would also be carefully guarded. In the West each man has to provide his own blankets and this appears to me to be a good thing, for it makes the lumberjack have some conception of the value of other people's property.

How Swing Scale Has Climbed Steadily.

Ten years ago we boarded our men for 25c a day. That was the expenditure for grub alone. Four years ago the cost had risen to 35c, and now the figure is 65c to 75c, and is likely to go higher during the coming season. Thus the amount of money invested in the commissariat department is increasing by leaps and bounds.

At all our sawmills, the hands are paid so much a day and are charged \$6 a week for their board. Why could not the same regulations apply and be worked out in the lumber camps, I am certain such a move would give an equal measure of satisfaction. The proposition of day labor in camps may stagger some old-timers, but I believe it is a movement destined to come. Changing conditions demand new and efficient methods to meet them and the means employed yesterday will not answer for the morrow. Everything is on the move, and it is the trend of all things better and higher that makes for sound business principles and the exercise of good judgment and common sense. Any scheme that will make labor more contented, self respecting and productive should be adopted. The day labor plan is, I believe, more remunerative for any logging company as well as for the men themselves. It is no fad or socialistic move and we must offer something very definite and businesslike if we are to get anything like sufficient help to man our camps during the coming season.

How the Shortage in Labor Grows.

I know of one concern that, in 1915-16, had 1,300 men in the woods in Northern Ontario, and operated 13 camps in all. In 1916-17, so scarce was help owing to the inroads made upon this class of labor by military and forestry enlistments, that there were only 550 men in the bush which has been reduced to ten in number.

This shows how production and labor are decreasing each year. This is but a typical instance that something must be done to meet the new conditions that are arising.

I maintain that day labor will do it more quickly, satisfactorily and efficiently than any other reform proposed and that it will give camp operators better control and management of his men and enable him to place logging on a better and more progressive business basis than anything that has so far been devised. Such a plan is, in my humble opinion, worthy of united trial. One alone cannot accomplish much in any effective undertaking, but by association and co-operation, by agitation, experience and education a great deal that is practical, economic and beneficial can be brought about.

Two New Lumber Companies Chartered.

The Giard and Caswell Lumber Co., Lapraire, P.Q., has been incorporated with a capital stock of \$10,000, to operate mills, to deal in all descriptions of wood, wholesale and retail, and in timber limits.

With a capital stock of \$45,000, Letourneau & Lambert, Ltd., has been formed to cut, buy and manufacture all descriptions of commercial woods; to engage in the business of floating logs; and to deal in timber limits. The principal place of business is La Sarre, County of Temiscaming, P.Q.

A report on the operations of the Canadian Forestry Corps overseas received by the Militia Department states that one company in France has made a record production of sawn lumber. In ten hours' sawing they turned out a total of 156,000 feet, board measure, or 372 tons of one-inch, two-inch and three-inch square-edged butted lumber. Logs sawn numbered 342.

Co-operative Saving of Foodstuffs

Ottawa Valley Lumbermen Do Not Favor Cafeteria—Why It will Not Meet Camp Conditions and Operations

A cafeteria system in the woods' camps of the major or most influential companies operating in the Ottawa Valley will not likely be installed or put into operation for the coming season, if at all. The lumbermen generally while not opposed to the cafeteria plan, do not think it is designed to meet the situation in their camps. As applied to their needs and conditions as they know them, they believe that it is impractical.

The principle of the cafeteria, with its objective of conservation of the food and economy, is not frowned on by such operators who are not desirous of adopting it. The lumbermen who cannot see where it will advantageously fit in, in their line of operations, believe in the principle under such conditions where it can be successfully applied.

The point is that a very representative number of Ottawa Valley operators cannot see where they can utilize the cafeteria plan to advantage under existing conditions.

Further they believe that if the cafeteria system was operative that no greater amount of food would be conserved than under the proposed new regulations governing the old time camp system which will likely be in force this year.

If a cafeteria system is made compulsory by the Food Board as applying to lumbering camps serving one hundred and fifty or more persons its effect will not be as heavily felt among the Ottawa Valley operators as those who maintain and conduct larger lumbering camps in the western section. Anywhere from one hundred to one hundred and thirty is considered a large enough camp in the Ottawa Valley.

Co-operation between the Canada Food Board and the lumbermen exists. There has so far apparently been no friction and the consensus of opinion among most lumbermen is that the Food Board is showing ample if not generous consideration to the views and suggestions made to it by the lumbering interests.

Will Readily Co-operate with Food Board.

It is not the intention of any Ottawa Valley operator to show contempt for or violate any order that the Food Board issues as effecting the food situation in the camps. Rather the lumbermen appear to be eager and willing to assist the Food Board, and has been informed that no matter what regulations the Board makes relating to food will be obeyed and lived up to. From a well-informed source it has been heard that one operator in discussing the probable outlook with respect to the feeding of camps in the Ottawa Valley, expressed the opinion that if the regulations were such that he could not successfully operate, he would shut down his business sooner than violate the Food Board's orders.

The lumbermen absolutely intend to make it their particular business to see that all regulations of the Food Board effecting their camps are strictly adhered to. A close check will be put on all supplies going into the woods, and as to their distribution.

Under such restrictions, particularly as the camp cook or distributor will be held to strict accountability by both the Food Board and the operators, it appears that the "so much per man diem" system will work out very well. If it comes into effective operation as proposed, it will mean the passing of the gluttonous element in the lumber camp. In fact, it would not be at all improbable that the foreman of the camp, sitting at the head of the table, would be delegated to see that each man, big or small, received his proper share and allowance, and no more.

Perhaps one of the biggest questions which have cropped up in connection with the application of the cafeteria system is that of the noon day meal. If the cutting were close to the camps the men could come in for their dinner instead of taking out lunches. If they are laboring at a distance from the camp the cafeteria plan would imply that they would have to return for meals. This would mean a considerable part of the men's lunch time being taken up in transit and on arrival at the camp, instead of sitting down to a table already provided with food, would have to further wait their time in turn at the cafeteria counter. As applied to mining camps the system may work out all right, for the reason that the location of the mine shafts are not continually working further and further away each day from the cookee. Mine shafts remain stationary usually, while log cutting operations expand in a widened radius daily.

Feeding System will be Radically Altered.

Cafeteria system or non-cafeteria system there are two outstanding facts pretty well decided on by the lumber operators. The first is that the whole feeding system of the Ottawa Valley camps is to be overhauled from cellar to garret, and the second is that the great-

est conservation of food and elimination of waste is going to be made. No matter what system is followed the lumberjacks going into the woods this season will find a striking contrast with the bounteous board and "eat all you want, and what you don't want waste if you like" system which has more or less prevailed for many years.

The question and advisability of installing and operating a cafeteria has been given considerable thought, and was more or less threshed out at a meeting of representative lumbermen held at Ottawa recently. The outcome of it was the conclusion that the cafeteria system would not prove satisfactory. One of the parties in attendance pointed out that most of the lumberjacks who work in the Ottawa Valley lumbering camps come from Quebec and have quite a conservative view as to what their food should be both as to quality and quantity. The impression conveyed was that this class of lumberman would absolutely "balk" and become dissatisfied with his food served under the cafeteria method.

With the plans of operation in view, which have not yet quite fully matured, the lumbermen were of the opinion that the limiting of food per man per diem would meet the system of conservation and elimination of waste pretty much the same as the operation of the cafeteria system. On the North Shore and in the Georgian Bay districts it was affirmed a different class of woodsmen inhabited the lumber camps, and were not to the same extent epicureans.

Why System Should Not Fit In.

While no official view could be obtained it was apparently obvious that among the objections to the operation of a cafeteria system in the Ottawa Valley Camps were the following:

Reputed epicurean tastes of Quebec lumberjacks as compared with those of the woodsmen of the North Shore and Georgian Bay districts.

Increased expense involved in changing present camps and furnishings, equipment, etc., from old systems so as to comply with new.

Doubt as to whether cafeteria system would prove practicable for noon-day meal if workers were operating at a distance from the camp.

Despatch with which the meals might be served within a given time in a large camp.

The camp feeding system for the coming season's operations is just about as an important problem as lumbermen have run up against for some time. It is generally believed that the Food Board is going to issue regulations which will have an important effect on the lumbering industry and in Canadian camps. The two cardinal points in the regulations when they appear will likely be conservation of food, substitution of non-essential foodstuffs for the essential, and the great reduction of waste.

The cost of meat, especially pork, beef, etc., will heavily assert itself to the lumbering interests this year. Labor is high and the cost of logging has increased. Thus the operator has got to be careful for the country's sake first and his own sake secondly that high-priced foods are not wasted or indiscriminately used without yielding a maximum return from the workers who consume them.

On the other hand the operators realize fully how the employee may take to the limit system of food. In the past the workers have been accustomed in most woods camp to what is wholesome and substantial, and lots of it. If they did not like their fare at one camp they called for their time and travelled on. In some instances such desertions, which often occurred in large numbers, proved a financial loss to the camps deserted, inasmuch as in some cases the railway fare into the woods had been paid by the operator. Large migrations from one camp to another resulted in a slackening of the output, and as was proven in last season's cut, it was difficult to make up the deficiency once the cut got far behind.

The Same Menu Will Prevail All Round.

The operators want to hold their workers this season, and if one set of regulations governs all camps in the Ottawa Valley with an equal distribution of food per man per diem, it will benefit the woodsmen nothing to keep shifting from place to place.

Another point is that the operators all realize that the labor performed by the lumberjacks is of a strenuous nature, and to maintain his efficiency it is necessary that he be well nourished with wholesome food.

The lumbering companies apprehend it now and the lumberjack will later on that there is great necessity for a change in the camp feeding system, which will necessitate a sacrifice on the part of any epicurean tastes he may possess. If the restrictions are made too close and too severe they will entail hardships both on the operator and the lumberjack, with the result that the latter may go to the city to work in munition plants, etc., at high wages and where he can secure the food he most desires. If the woodsmen desert the woods for munition plants and city or farm work in large numbers there does not appear any alternative for the operator but "shut up shop," but such a contingency is rather remote.

THE HARRIS ABATTOIR COMPANY, LIMITED

specialize in supplying lumber companies with camp requirements. All product shipped to lumber companies is specially selected, specially cured, and specially packed to withstand many handlings before reaching destination.

Every lumberman should ask the Harris Abattoir Company to figure on all requisitions before placing orders.

All H. A. Brand goods are fully guaranteed.

The Harris Abattoir Company, Limited, specialize on making shipment when promised and Refrigerator Car Service to all points obviates any delay.

What Logging Men are Facing

Cost of Feeding Men has Doubled and Labor is Becoming Scarce and Noticeably Inefficient.

By A. E. Beck, Thessalon, Ont.

A. E. Beck, Thessalon, Ont.

In my estimation, the prospects of getting out logs in the woods during the coming season in an at all economical manner are very blue. The cost, I think, will exceed that of last year, which was enormous. There will, no doubt, be a great shortage of labor for the woods. Last season camps were run with from one-half to three-quarters of full crews, and I have heard of few camps that had the number of men they required.

A large number were brought in from the United States last year, but I understand this source is cut off now and we will have to depend entirely on the available supply in Canada, which, I think, will not be adequate, and I look for a greater shortage than last year.

The class of labor we are getting is also very inefficient and the amount of logs turned out by a camp is at best half what it should be. The inefficiency of the labor is partly due to the necessity of engaging men who have never been in the woods before and are not experienced in the use of the tools we have to work with, such as the axe and canthook, etc., and seem to have little ambition to learn how and try to really earn the wages and board they receive. The sprinkling of experienced men we have left us have become contaminated with the same spirit, until it seems almost a competition amongst the men to see who can do the least work.

One hopeful sign in the labor situation is that the men at the mills this summer are staying at work more steadily than last year and seem to have got over the unrest that was so hard to cope with. The putting in force of the Military Service Act last fall was the cause of disorganizing our work in the woods to a serious extent. Now that this unsettling factor is not to be met and Dominion Registration has taken place we find labor much more steady this year.

The cost of feeding men in the camps has increased in the past few years from forty-five cents per day per man to eighty-five cents, and will probably exceed this figure during the coming season, as nearly all lines of groceries used in the camps have advanced in price.

Still Following the Same Methods

With such an increase in the cost of labor and board, and the cost of feeding horses has likewise jumped, one naturally asks if there is not some new or improved way of getting out logs. We are still using the same methods and appliances that were employed thirty years ago. The only innovation is the loading machine for loading the sleighs, in place of the old decking chain, but the decking chain is still used in many instances.

The only improved method of logging is by logging railroad and the use of steam skidders and loaders, but this method is out of the question in Ontario owing to the rough nature of the country. The cost of building the railroads would be prohibitive.

In some cases steam haulers can be used economically where one has a long haul and a good road can be got. But even the steam hauler has not proved a success on short hauls or where there are lakes to contend with or bad hills to go down.

Consequently, in rough country, such as we are in I find the old methods the only ones that can be used.

The only chance of getting more efficient work done would be in getting the men working by piece work instead of by the day.

Difficulties of Changing Pay System

This would be a very difficult system to inaugurate in logging camps, owing to the great variety of the work and owing to the difference in the size and the thickness of the stand of the timber. Scattered timber is always expensive to get out. It would be impossible to pay men at so much per log as is done in making railway ties. A gang

working in a thick stand of small timber might be turning out three hundred logs a day, while another gang laboring equally hard in large timber might turn out only one hundred a day.

The only possible unit that I can see that might be used would be the 1,000 ft. b.m., and it would be rather intricate to work out a satisfactory system to use this unit.

I can see no prospect of cheaper logs and consequent decrease in the price of lumber as long as the war lasts. After all, the price of lumber has not increased in proportion to all other building materials.

Pacific Coast Business Expanding

Numerous Large Projects are Under Way and Great Activity is Manifested in Pulp.

By C. S. Battle, Vancouver, B.C.

Business in British Columbia is expanding, although general conditions have remained almost the same during the past few months.

Small tracts of timber-land located on or close to salt water have been in good demand at a fair price, while large tracts for speculation have not been active. Most of the timber is getting into strong hands—owned in fact by parties who know that the value is growing every year and that as soon as times become normal they will be well repaid for carrying their timber through the hard times.

There is almost an unlimited requisition for pulp and paper and the demand for lumber is also active. Yard stocks are decreasing and prices are good. Speaking further and in a general way regarding lumber and pulp, I may state that several mills that have been closed down for some time are now beginning to operate and some new ones are being built.

The Beaver Cove Lumber & Pulp Company, a new organization incorporated under the laws of British Columbia, with \$1,000,000, fully paid up, have commenced the erection of a sawmill with a capacity of 100,000 feet per day and the first unit of a pulp mill with a capacity of 40 tons per day. Four other units will be added just as soon as conditions will justify, making in all a 200 ton pulp plant.

In addition Duluth parties will soon erect a sawmill at Alberni with a capacity of 250,000 feet per day. The export lumber trade is limited only to the carrying capacity.

I have touched upon the bright side of the lumber and logging situations. It is only justice to state both sides, and I refer to the labor situation and the high cost of living. These two factors have been and are a problem and the additional cost of production will have to be added on to the price of logs and lumber. Large American interests are opening up about one billion feet of fine timber. They will build a railroad about fifteen miles in length to connect with the C. P. R. and Fraser River.

The shipbuilding industry has grown to be a dominant factor in this section and since the labor troubles have been settled, this line is destined to be a steady and growing industry.

Are Lumber Quotations Up for Good?

By G. B. Cross, New Westminster, B. C.

Lumber manufacturers hoped that in meeting the workmen's demands for a shorter day there would be a greater production per hour. This hope has not been realized.

In logging there is not now the hard labor there was ten or even five years ago. The "faller" indeed, has a strenuous 20 to 40 minutes in "falling" his tree, but this always comes in spasms with ten or fifteen minutes intervals. The other work is largely done by machinery and is not at all exhausting.

There is still the few minutes lost in starting the four-hour shift, and the slowing up ten or fifteen minutes before the whistle blows—so that an eight-hour day both in woods and mills product is just 80 per cent. as much as a ten-hour day, or even a little less sometimes.

It is difficult to figure out just how much this condition adds to the cost of production.

The equipment to handle our large timbers is very expensive and with it lying idle two hours per day longer than last year, there is a big loss.

We have come to the conclusion that lumber costs in British Columbia are up for good, and whilst we may have reached about top selling prices, it is certain there cannot be much if any reduction, at least, during the war.

Beech logs that formed 600 years ago the foundation of Winchester Cathedral have just been uncovered. They were found to be in sound condition, although they had been exposed to water for almost six centuries.

DUNLOP "Gibraltar RedSpecial"

POWER—SPEED—SERVICE

NOTHING short of remarkable was the advent of this master Dunlop Belt "Gibraltar RedSpecial." Its coming undoubtedly solved that momentous problem which had for years baffled belt users, namely, the economical transmission of power, combined with an unusual length of service.

Dunlop Workmanship An Important Factor

"Gibraltar RedSpecial" superiority lies not alone in the supreme quality of the materials embodied in it. Dunlop Workmanship, the character of which is unsurpassed, has also contributed its quota. This accounts for its great tenacity, its enduring flexibility and its absolute uniformity throughout.

Held In High Favour

Resistance to destructive elements, and the unusual capacity to continually deliver the maximum of power with the minimum of up-keep expense, are characteristics of "Gibraltar RedSpecial" which have placed this belt on the pinnacle of popular favour.

Where This Belt Excels

"Gibraltar RedSpecial" is particularly adapted to Saw, Lumber, Pulp or Paper Mills, Bleacheries, Mines, Cement Plants, Brick Yards, Oil Wells, Threshers and Stone Crushers. It is built especially to withstand the jerky strains consequent on the fluctuation of power under any load; is immune to the deteriorating effects of an over-abundance of moisture, or, as in the case of Pulp and Paper Mills and Bleacheries, injurious vapour fumes. Maximum adhesion over small pulleys on high-speed machines is another reason why this belt predominates.

The Dunlop Guarantee

If you have a difficult drive anywhere in your factory drop a line to our Head Office, or to our nearest branch, and we will send a man experienced in belt engineering to consider your requirements. If it is an instance where the "Gibraltar" Belting may be suitably employed we will recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm producing rubber products.

"The Original Red Rubber Belt."

Sawmill Machinery

The Waterous Twin Circular Saw

in conjunction with the Kendall Circular Gang presents the cheapest way of turning small logs into merchantable lumber. Four men only are required to operate it.

It takes logs up to 16 ft. in length, and will cut cants from 4 inches to 12 inches in thickness.

THE TWIN CIRCULAR consists of two independently driven saw frames, carried on planed iron slides upon which they are adjustable, to permit cutting a cant as narrow as 4 inches or to a width of 12 inches.

FRAME CASTING is in one piece with the bearing cast solid with it to make mandrel alignment a certainty. The saw frames are adjustable by rack and pinion and controlled by a hand wheel, making for rapidity of movement with a minimum of effort and no possibility of a shift during cutting.

Write for full particulars.

Waterous

BRANTFORD, ONTARIO, CANADA

Sawmill Machinery

KENDALL 1918 GANG

It takes cants from 4" to 12" thickness and at the rate of from 2500 to 3000 a day, will turn them into lumber, perfect in finish, and cut evenly from end to end. Big capacity on small stuff, and lumber cut better than is possible on Band Saw, Circular Saw or Vertical Gang distinguish this machine.

A new machine that is new.

Waterous

BRANTFORD, ONTARIO, CANADA

SUPREMACY

It takes more than Capital, more than Determination, more than Aggressiveness, more than Advertising to make a product leader of its kind.

All these aids, powerful as they are, would be unavailing to achieve such a position unless the product possessed superior merit.

Superior Merit Alone

has placed

Harris Heavy Pressure

in its position of

Supremacy

It is known as the Babbitt Metal without a fault and for general machinery bearings has no equal. It gives excellent service in all lumber and woodworking plants.

Order a box from our nearest factory.

Canadian Western Oats

Reliable Service

Prompt Shipments

We make a specialty of supplying choice, heavy, white Western oats for the Lumbering and Logging Trade, either in bulk or in sacks.

Our facilities for handling your requirements this season are the very best. Our shipments are selected from over two hundred elevators located in the best oat districts in Alberta and Saskatchewan, while our elevator and sacking plant at Port Arthur is especially equipped for the handling of oats, thus insuring the best of service and prompt shipments.

National Brand

oats are machine cleaned; there are none better. We can also fill your requirements for No. 2 CW, No. 3 CW, Extra No. 1 Feed, No. 1 Feed, No. 2 Feed oats, and sample shipments of oats or of wheat.

Shipping conditions during the Fall and early Winter are generally very acute. We urgently recommend securing your supply of oats for the coming season as far in advance as conditions will permit.

Write or wire for our quotations; your inquiries will receive prompt attention.

The Machine That Made A Record In a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ¾ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, breakdowns or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims.

**The Truck That Saves Its Cost
Several Times Over in the Year**

This truck is designed for lumber yards and planing mills, and will be found invaluable for loading and unloading cars.

The front gearing is detachable, and may be used with eight or twelve lind gears. It is a double-header, nuts on axles being kept tight with Steel Cotter Keys.

Oil cups on the wheels and the fact that there is no resetting of tires saves any amount of trouble.

The old wooden-wheeled truck is a back number in comparison with this. It will pay you to write for our general catalogue, which describes these trucks in detail, and pick out the style you want now.

TANNERS & MANUFACTURERS

"LEATHER LIKE GOLD HAS NO SUBSTITUTE"

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work.

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Are you using
the Best?

Steam and Gasoline Logging Machine

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Send for Catalogues of
any or all of
these machines

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Dunbar Engine & Foundry Co.

WOODSTOCK, N.B.

Applied Science Saves Money For Lumbermen

who log their own timber. Throughout your entire plant science has made possible your present increased capacity at a saving in time and money. Now it is applied to your railroad track work through the use of a

Bell Track Layer

Here's a machine that will help you to overcome the present labor shortage and at the same time will reduce the time one-third required for laying track.

The secret of its success is in the fact that it keeps both rails and ties at the **point of closest contact**, thereby reducing carrying to the minimum

and **pushes your crew** every foot of the way—there's positively no waiting for material. Surely now is the time to apply this science to your logging railroad and save labor, time and money in ripping and laying steel. The Bell Track Layer is being used by more than fifty close calculating logging operators.

Let us send you our booklet showing by means of photographs how the Bell Track Layer lays and rips railroad track—or let us arrange with you and some of your nearby neighbors for a demonstration—absolutely without any obligation on your part.

Bell Railway Construction Car Co.
Georgiana, Alabama

"If you are big enough to own a railroad you need a Bell Track Layer"

Alaska No. 1 Double-Deck Bunk
(Steel Angle Frame)

When You Use "ALASKA" Double-Deck Bunks

YOUR men work harder and more steadily, because at the end of the day they can utterly relax with entire comfort on these sanitary steel bunks. The twisted link fabric springs have just the proper amount of tension to "give" without sagging. They support the body in a perfectly normal position, and when overlaid with an Alaska mattress they supply all the rest the most exacting workman could demand.

They are noiseless under pressure, and because of their all-steel construction are not only durable and rigid, but entirely vermin proof.

Finished in black japan. Elevation of lower spring, 19 inches; of upper spring, 50 inches.

Shipping weight, 118 lbs.

STRIKING

The Story of Eddy's Matches
Since 1851

for
67 Years

FROM CRUDE SULPHUROUS
MATCH TO THE SCIENTIFIC

Safety-First Match

AMONG all the wonderful inventions of the Nineteenth Century none will dispute first place to the Match for invaluable utility. Familiarity has perhaps bred contempt; but we are helped to realize the magnitude of the debt we owe to the Inventors of the Lucifer Match if we but stop to consider how man would fare if it were possible to cut off the supply of these magic fire producers for only one brief day.

In spite of the fact that fire has been employed by man since pre-historic days, it was not until the beginning of the Nineteenth Century that anything in the nature of a match was available.

The first match consisted of a stick of wood tipped with sulphur and then with a chlorate mixture. The match had to be drawn rapidly across a piece of folded sand paper to be ignited. As far as we know these were sold in boxes of fifty for the equivalent of about 60 cents.

WONDERFUL ADVANCEMENT

How different it is in Canada to-day and what a wonderful stride has been made by The E. B. Eddy Company from the first crude, slow-lighting, poisonous, friction match made by them before Confederation, with its unpleasant odor, its afterglow and danger, to their present day match which is one of the outstanding triumphs of this generation!

PURCHASING DISCRIMINATION

The high tax recently imposed upon matches by the Dominion Government makes it more than ever a matter of importance for the buying Public to realize good match value. The self-extinguishing quality of the "Silent 500s" has the heart-whole endorsement of all Fire Inspectors and Agents who recommend their use together with the famous EDDY round-bottomed Fibreware Fire Pails throughout Mill, Warehouse, Office, and last but not least in the home circle.

GRATON & KNIGHT

Standardized Series LEATHER BELTING

Tanned by us for belting use

**GRATON
AND
KNIGHT**

HOOVER STEEL BALL COMPANY

ANN ARBOR, MICH Dec. 31, 1917.

The Graton & Knight Mfg. Co.
264 E. Jefferson Ave.
Detroit, Mich.

Gentlemen:-

We have practically eliminated all other leather belting from our works and are using Spartan Belting entirely on the Dry Grinders, which place we are sure is the most severe use for leather belting there is in the State of Michigan.

We have been experimenting with leather belting for the past three years to get a belt that would give us service. We have not limited ourselves to price on this belt. For this purpose the life of the belt ordinarily is short, therefore, it is our desire to buy the best belting that we can possibly obtain, regardless of price.

Our Engineer has advised us that Spartan Belting has in every way met with our expectation and this has reduced our belt expense approximately 40% within the past fifteen months. Within the past twelve months we have discontinued using all other makes and are using this Spartan Belt entirely as it has been the belt which has stood up for this particular purpose.

Very truly yours,

HOOVER STEEL BALL COMPANY.

LJH:EH

L. J. Hoover
President and General Manager.

"the most severe use of leather belting" (see letter)

The advantages of standardized belting stand out most conspicuously in severe use, but they are just as truly present in less exacting conditions. Dollars are valuable whether you save them by tens or by hundreds.

The steps in acquiring transmission-wisdom run somewhat as follows: A poor belt is better than none at all. A good belt is better value than a poor one. But the scientifically right belt for each machine is the highest economy of all—and that is Standardization. It also explains why there is greater demand for Graton & Knight Standardized Series Leather Belting than for any other brand in the world.

*Write for information about Standardization
as applied to Belting*

"Suggestions for the Lumberman"

The above is the title of a booklet which we are trying to put into the hands of every Lumberman and Mill Owner in Canada. The suggestions contained therein are live, practical and of proven worth. There is something of value in this booklet for every Lumberman, no matter what the size of his camp, large or small.

The Mill Man also will find his time well spent by a perusal of this Booklet, as there are suggestions therein by means of which he can reduce his operating expenses and increase his profits.

WE WANT YOU TO HAVE A COPY

If you have not received yours yet, drop us a card. We will gladly place this Booklet also in the hands of each one of your foremen if you wish. Just say how many copies you want, if you prefer to distribute them yourself, or send us their names, and we will mail them direct.

Marsh Engineering Works, Limited Established 1846 **Belleville, Ontario**

The Y.M.C.A. in Industry

is like lubricating oil in machinery. It eases the strain and helps things move smoothly. It increases efficiency and promotes goodwill. Don't cut out the oil-can !

The accompanying illustrations show the Y.M.C.A. building erected and maintained by the British Chemical Co., Ltd., at their plant, Trenton, Ontario.

- A Y.M.C.A. Program keeps the men and boys in line, in tune, invigorated.
- Bed, board and the job are not enough. Remember playtime.
- Take heed to the leisure hours and the work hours will look after themselves.

The Mighty **WADE** Outsaws 10 Men!

Are You Short-Handed?

Speed up production to war demands—lower your costs at the same time! The WADE Gasoline Drag Saw will replace several men in bucking logs, cutting bolts or wood for your donkey. In fact, it will do all the odd jobs of a cross-cut saw at the fraction of the cost for man-power.

Read This Proof of WADE Superiority!

Jackson, Tenn., April 23, 1918.
Gentlemen: As to results derived from the tests of various makes of drag saws in the woods for cutting bolts and logs, I wish to advise that after a thorough trial by cutters, testing each machine under the same conditions, I find that **THE WADE IS THE SIMPLEST AND MOST PRACTICAL AND HAS GIVEN US MORE SATISFACTION THAN OTHER MAKES.**

A 53 YEAR REPUTATION BACKS THE WADE

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 90c per lb.; West of Fort William, \$1.00, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00
worth of mixed metal
sold annually.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

**Not altogether what we
say, but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

**—economy to-day
is a deed
of patriotism**

—and is extensively engaging the attention of manufacturers everywhere. There are hundreds of lumber mills in Canada with an unproductive scrap-heap. The sawdust and waste wood lying around these mills can be turned into a great asset by installing Wood Distilling and other Chemical Plant. We have specialized in the building of chemical plants; and have installations in all parts of the world—plants with a big guarantee behind them!

DISTILLATION PLANTS: Slabs, Limbs, etc.

ALCOHOL PLANTS: Sawdust, Shavings, etc.

PULP MILL EQUIPMENT: Soda, etc.

OXALIC ACID PLANTS: Sawdust, etc.

**WASTE SULPHITE LIQUOR
FERMENTING PLANTS:** Alcohol.

Let us hear from you.

Little Giant

Worm Drive Trucks

Standard Models

"15" 1 Ton

"16" 2 Tons

"17" 3½ Tons

The Duntley

Hydro-Pneumatic
Gas Generator

THE DUNTLEY Hydro-Pneumatic Gas Generator is an exclusive feature of Little Giant Motor Trucks. With this device the Little Giant Truck may be operated on a mixture of one-half kerosene and one-half gasoline, at a saving in fuel cost of over 50 per cent., with a total absence of carbon, smoke or odor.

**ONE YEAR
GUARANTEE**
backed by a corporation with
resources of
\$14,000,000

THE LITTLE GIANT MOTOR TRUCK enables the retail lumber dealer to give his customers the very best of service, which is the big outstanding argument that interests the busy contractor. Other things being equal, the lumber dealer who can give the best service gets the most business.

Our No. 3 Lath Machine

is very strong in construction, both in frame and bearings, and will stand the grind of big production and continuous use. It is designed primarily for mills that require an enormous output—that must have speed and reliability. The success of a single installation has, in a great number of cases, been the means of our placing repeat orders in many parts of the Dominion. Floor space required, 4 feet by 4 feet 6 inches; weight, 1,600 pounds. Maximum power required 15 h. p.

We can ship one of these Machines immediately from stock.

We also
make
equipment
and
machinery
of all kinds
for the
lumber
industry.

ORILLIA, ONTARIO

Bain Sleighs for Logging Operations

Famous for their great Capacity and Light Draft

Logging is a severe test of a sleigh.

It pays to buy the best, even though you may pay considerably more than for one which possibly may appear to be just as good.

It is only by actual test—the test of time and hard usage—that the difference is apparent, and the increased first cost is forgotten. The quality is remembered long after the price is forgotten.

The cross chain couplings allow great flexibility and the hind bob follows in the tracks of the front when turning. Some prefer the short reach for well broken roads, as a sleigh so fitted can be backed same as a wagon.

Swing bunks are an advantage in the bush, as they can be swung parallel with the runners when driving without a load.

Any of these sleighs except the heavy sloop can be fitted with 38, 40 or 42 inch bolsters for general work.

Our new catalogue No. 33 tells all about it and is yours for the asking.

The Bain One-Beam North Shore Sleigh

Steel Shoes; Swing Bunks or Bolsters; Cross Chain Coupling; 2 ft. 10 in. or 3 ft. Track. Clearance under Beam 9½ inches.

The Bain Heavy Sloop Sleigh

Steel Shoes; Short Reach or Cross Chain Coupling; Furnished without Bolsters but with king bolts front and rear; 3 ft. 4 in., 4 ft. 4 in. or 4 ft. 8 in. Truck. Clearance under Beam 7 inches.

Massey-Harris Saw Rigs

Stationary or Portable; 20 to 30 inch blades. For cutting cordwood, pulpwood or poles. Descriptive circular tells all about their many points of superiority.

Massey-Harris Gasoline Engines provide an efficient and economical source of power. 1½ to 20 H.P.

Stationary, Portable or Semi-Portable.

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY.—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR.—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

Province of New Brunswick

Sale of Timber Limits

There will be sold at the CROWN LAND OFFICE, Fredericton, on Thursday, the 5th of September, 1918, at 12 o'clock noon, the right to cut and carry away all classes of Merchantable lumber on

400 SQUARE MILES

Licenses to run to 1st August, 1933, subject to annual renewal, fire protection tax, payment of stumpage and the timber regulations.

Among the tracts offered is the "Training Ground Reserve" containing 106 square miles on the line of the Transcontinental Railway, east of McGivney Junction. On this block there is an estimated stand of Merchantable lumber made by Forest Engineers of:

Spruce	-	-	-	8 millions S.F.
Fir	-	-	-	3 millions S.F.
Other soft woods	-	-	-	4 millions S.F.
Hardwoods	-	-	-	9 millions S.F.
				24 millions S.F.
Undersized soft wood				30 millions S.F.
Total	-	-	-	54 millions S.F.

The remainder of the 400 sq. miles is situate in the counties of Northumberland, Kent, Westmorland, Charlotte, King's, Queen's, Sunbury, York, Carleton, Victoria and Madawaska.

Berths are sold in 10 sq. mile blocks and less.

For further information as to quantity of lumber; upset prices; plans, etc., apply to the Deputy Minister, Department of Lands and Mines, Fredericton, N.B.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 38 Toronto, August 15, 1918 No. 16

Getting the Greatest Good out of Association Efforts

The measure of usefulness or service of any association is the benefit which may be derived from being a member. Too many persons are there identified with various organizations who never attend meetings, never take part in discussions or advance anything for organic welfare, progress or stability. These slackers turn around on certain occasions and sneeringly observe: "Oh I belong to that body but I never get anything out of it." In answer to a derogatory remark like that, those who have been putting their shoulder to the wheel, feel like saying: "Well, how much have you put into the association that you never were able to take anything out?" Any trade body, that has for its object the weal, unity, and cohesion of its members is to the average member a good deal like a bank is to its customers. If you put in something constantly and regularly, you are able to draw out more than you deposit, and it is the active, working member who attends the various sessions and follows closely what is going on, who secures the full rewards in gatherings of his fellows. At the same time he reaps in a social way the satisfaction of intimate acquaintance with brothers in trade, and acquires a broader understanding of human nature, which is in itself a valuable asset.

The various phases of association work, what has been accomplished and what it is hoped to accomplish in the near future were presented by several leaders of the trade in the last issue of the "Canada Lumberman." May some indelible impression be left upon the minds of the indifferent or the lukewarm. Whether or not retailers are members of the Ontario Retail Lumber Dealers Association, all are invited to the annual convention which will be held in Toronto on September 3rd and 4th. This promises to be a representative, record breaking reunion, and affords the average dealer not only a pleasant holiday during which he can visit the Canadian National Exhibition, but he can also rub shoulders with his fellows and learn what they are doing in a business way. He will ascertain how others overcome certain problems, win certain business struggles, and in the end come

up smiling. It is generally conceded that the best business men are those who are identified with an association, calculated to promote the highest good of the trade, and a glance at the membership list of any industrial body will bear out the truth of this assertion. It is wise, therefore, to become connected with a growing company like the Ontario Retail Lumber Dealers Association who, within a year, have attained membership of over 150 of the liveliest, brightest and most substantial yard men in the province. They are out to live and let live, to get pointers and give any if at all possible. They realize that there is much to learn from others and from the benefits of travel and the interchange of thought, ideas and experiences.

The coming convention bids fair to be one that will be long remembered by reason of its large attendance, the high character of its discussions, the aggressive work undertaken and the ambitious projects in view. Let there be a record representation and let each member of the trade do all in his power to keep to the forefront the best traditions and the highest ideals of the calling in which he is engaged. He can best do this by joining the association, being present at its meetings, participating in its deliberations and inducing all the others in his town or city to follow the same course, thus developing union, strength and influence.

Utilizing to the Maximum the Opportunities at Hand

If asked what constitutes success, varied replies would be received. Probably the most comprehensive definition is summed up in the phrase "doing the proper thing at the proper time"—not after the other fellow has done it. In other words, it means making the most of the opportunities that lie right at hand. There are openings presenting themselves every day of which advantage may be taken. This observation applies to the lumber industry as well as others. More and more attention is being directed not only to production but to the selling end, as well. Just now the field of most immediate exploitation lies in the development of the home-making sentiment. In every town and city there is a cry for more houses, and the want of additional dwellings is far from being met.

One of the live wire retail lumbermen of America is Julius Seidel, whose name is familiar to the trade in the Dominion. He is pointing the way to greater expansion in the retail lumber business by original and effective methods. He believes in capitalizing opportunities and backs up his thoughts with action. While building operations have fallen off in nearly every city across the border and in the Dominion, Mr. Seidel thinks this is a favorable time for the retail lumbermen to stimulate and encourage the renovation and extension of present homes. According to the "Timberman," Mr. Seidel recently addressed a body of local lumber merchants in a town not far from his own city and drove home some practical and forceful reasons in modern salesmanship. One point that he made was relaying the present soft-wood floors with oak flooring. He said oak cost less than linoleum or carpets, and imparted a touch of refinement and comfort to the home that was incomparable with the expense. He emphasized the sanitary, labor-saving and attractive appearance of hard wood flooring, and the boon and blessing that it was to the housewife. He enthused his hearers and suited action to the words he spoke by making the proposal that if any dealers present would agree to lay floors in their own living rooms he would furnish the material free of cost. This overture was a clincher and the sincerity and generosity of his offer carried conviction with it. Half a dozen dealers accepted the proposal and the flooring was shipped in due time. One man said that he had talked the matter over with his wife and they had decided to re-lay every room in their home with oak flooring and included the order for the additional material.

As an exhibition of live, alert salesmanship the action of Mr. Seidel has few equals. He sells oak flooring and as an advertisement his offer and performance was excellent. It was an object lesson driven home into the consciousness of the lumber merchants present, who had not found business any too brisk and were lamenting the lack of opportunity. New vistas were opened out before their eyes and it was demonstrated to them that there are fields right at home

for the sale of material as yet unexplored. How many other opportunities are presented to the retail lumberman to get business. By judicious inquiry and well directed publicity he can stimulate the erection of new verandahs and sleeping porches, the construction of garages, implement sheds, henneries, pig sties, silos, summer kitchens, and general interior repairs and alterations. The possibilities of increasing the trade of the average retail dealer in every town are by no means exhausted, and the merchant who is progressive and receptive to new ideas is the one who is going to keep his stock on the move. Instead of waiting for business to turn up he will take every precaution to turn up business by advice, suggestion, helpful advertising literature, and rendering a practical, intimate service, which cannot fail to be appreciated and develop fresh avenues and outlets.

The Educative Effect of Practical Window Displays

One of the most educative and striking displays made in the lumber, woodworking and furniture line was presented recently by a Toronto departmental store. Everything in the line of process work was revealed from a section of the tree in the rough to the finished products, which included buffets, chairs and other household furnishings. Two foot sections of eight different kinds of trees were shown standing on end, and on the front of each were individual cards bearing the name of the wood, and showing by comparative figures how costs have advanced.

The signs read as follows:—

Beach lumber in the log 1898 \$4.....	1918 \$24 per M.
Cherry lumber in the log 1898 \$12.....	1918 \$30 per M.
Birch lumber in the log 1898 \$6.....	1918 \$30 per M.
Maple lumber in the log 1898 \$6.....	1918 \$30 per M.
Soft Elm lumber in the log 1898 \$6.....	1918 \$32 per M.
Rock Elm lumber in the log 1898 \$6.....	1918 \$40 per M.
Ash lumber in the log 1898 \$6.....	1918 \$32 per M.
Basswood lumber in the log 1898 \$8.....	1918 \$35 per M.

There were also shown one and two inch thicknesses of the finished lumber in quartered cut white oak, plain white oak, quarter sawed white oak, American black walnut, Mahogany (Mexican) and white wood. The bottom of the window was liberally covered with shavings and sawdust representing a typical workshop, and among the accessories to make the natural setting complete were a bench, vise, a circular saw, crosscut, etc. In the background were shown mahogany chairs, oak buffets and other articles of furniture in the process of production and a sign bore the inscription "Made in our own Factory." The furniture was shown in the natural wood and also in its beautiful finished state.

Bright Prospects for Timber Trade with Europe After the War

The prospect of the lumber business, both domestic and foreign, always arouses interest and more particularly so in connection with the period of readjustment and reconstruction that will follow the close of the hostilities in Europe. Some one of a cynical turn of mind, or of a "take no-thought-of-the-country" disposition may pertinently or impertinently inquire why worry about the future; why give heed to something that is perhaps a long way off—surely the trials and situation of to-day are enough to endure, and overcome without indulging in day dreams, imaginations or speculations.

This criticism may be answered frankly and fully by stating that every great undertaking, every large achievement and every masterful stroke has generally been the result of much previous thought and study, planning and preparation. Upon the foundation, its breadth, stability and character depend the permanence and proportions of the structure that will be reared after the clash of arms has terminated. It is therefore, natural that the prescient members of the lumber industry as well as those engaged in other lines, should look to continental Europe when peace arrives, with the prospect of resuming trade relations on a larger and more extended basis than even in the palmy days before 1914. The question of the development of the foreign

timber business of Canada is a large and complex one, and has to be viewed from many angles and in wider perspective than at first seems possible.

The demand of all kinds of wood in European countries for renewal and rebuilding purposes will be heavy. The splendid shipbuilding campaign now being carried on is likely to result in such a satisfactory state of affairs that ample bottoms will be provided. Canada certainly holds a unique position to take full advantage of the needs of Great Britain and other countries overseas just as soon as shipping facilities are provided for the definite resumption of commerce. While it may seem idle or inconsequential to speculate still this is a case of where dreams are likely to come true if all precautions are taken to ensure that we as a nation and a people do everything possible to pave the way for supplying the requirements that are known to exist across the Atlantic, and take full advantage of a situation which is being given greater recognition with each succeeding week. In this matter Canadian timber firms are dealing with an actual state of affairs and not a theory, a realization and not a prospectus. It is always instructive to learn the opinion of the other fellow, how he regards the outlook and sizes up affairs generally. In the multitude of counsel there is a great deal of wisdom. The voices of opinion expressed by a number of English importers and timber merchants are presented on another page of this issue of the "Canada Lumberman" and will no doubt be read with the greatest of interest.

What Keeping Lumber Business on an Even Keel Requires

In connection with any industrial undertaking, nothing seems to move exactly on an even keel at all times. Business has ever been a fight and a struggle. Under no circumstances, not to speak of war-time conditions, does everything glide along exactly right lines without worry or annoyance. If labor affairs are favorable then perhaps the market is dull, or the sources of supply short, and if production is speeded up to the mark, then shipping facilities are in all probability hampered, and if transportation is all that can be desired the demand is very possibly restricted. Operation and labor, production and distribution, supply and requisition seldom, if ever, dovetail. Pressure is always too high or too low on some of these important elements of the lumbering line, and the result is that the management of any concern has to be unceasingly active and constantly aggressive in watching costs, keeping down overhead, securing efficiency and introducing the latest and most effective time and labor saving methods.

Every branch of an industry has its difficulties and perplexities, but the majority seem to think that all the worries and obstacles are encountered in their own limited sphere of operation. The other fellow, if he has any tribulations at all—well, they are so few that they are not worth while recounting. The main thing to be taken into consideration is the mental attitude in which a man approaches his task. Be he employer or employee—he must recognize that barriers and entanglements, mistakes, losses and mismanagement are a part of the day's work and upon the ultimate showing made in dealing with these, in straightening out the kinks in the chain of business circumstances, and presenting a whole-hearted front to the outside world depend the power, success and permanence of one's grip and grasp, his organizing endowments and his genius for controlling himself and the environs under which he lives and labors.

At the present time there is no greater hurdle in the path of the lumber manufacturer's course than the restlessness and thanklessness of labor, the increased cost of production and the fact that prices for the finished product are not keeping pace with the augmented expense of getting out the timber, and taking it from the skids right through up to unloading the car at the customer's end. It requires more courage, tact, faith, perseverance, foresight and energy to win out in the manufacturing arena to-day than in any previous time in the world's history, for new and difficult problems are constantly presenting themselves, and just around each bend of the road there seems to be a snag of some kind, often unseen, which has to be dislodged in order that progress and expansion may result.

Economic Significance of Our Fire Waste

Composite contribution of what leading authorities have to say on momentous matter—Lumber and sawmill fires constitute heavy losses—Necessity for defence against common enemy—Public responsibility in safety and welfare work—Clarion call to active co-operation as Dominion has too long been asleep at the switch

By E. D. Hardy, Ottawa, Ont.

E. D. Hardy, Ottawa, Ont.

A visitor was making a tour of inspection of an Institution for the mentally defective for the first time, when his attention was drawn to a room in the rear of the building in which there was a long trough filled with water, supplied by a faucet. As his curiosity was naturally aroused, he asked the guard in attendance for what purpose the room was used. The guard replied that in testing the sanity of a patient they turned on the water and provided the inmate with a mop for drying up the floor. Those who showed signs of mental recovery first turned off the water, while those who had not yet acquired their faculties proceeded to mop up the floor, leaving the faucet turned on, and the water still running.

Inexcusable Fire Waste Permitted.

In these days of anxiety when we hear so much about the necessity for conservation and thrift, it is a lamentable fact that so little attention is apparently being paid to the enormous destruction of our created wealth by the enemy—Fire.

Of what advantage is it to our armies in the field if we conserve our wheat and bacon, and work industriously on the production of munitions only to have such materials consumed by fire in the elevator, or at some warehouse or plant. Even after years of experience and education the general public does not seem to realize that fire losses are not paid by the Insurance Companies, as commonly understood, but are, in reality, borne by every individual, whether a policy holder or not, and that no loss by fire can ever be restored.

"It is a singular commentary upon our mental acuteness, says Mr. Franklin H. Wentworth, Secretary of the N. F. P. A. that we do not yet discern that fire insurance is a tax, sifted through the buying and selling processes upon the entire community; that every fire hazard tends to increase this tax, and that every element of fire prevention tends to lessen it. Insurance is merely a reservoir from which flows immediate relief for the victim of fire, who, because of this reservoir, need not wait to recoup misfortune; but this reservoir must be refilled, and kept filled, if sure relief is to flow to succeeding sufferers."

The figures for the Province of Ontario alone, appearing in the last issue of Public Service Bulletin, under Department of the Fire Marshall's Office, show no improvement in the steady drain upon the created wealth in the matter of fire losses, but rather show the increasing destruction of property by fire. Of the six largest fires reported for the month of May, amounting to \$640,271.00, in this Province alone, over one half of this amount is attributed to lumber and mill fires.

In dealing with the fire waste in Canada, Mr. J. Grove Smith, of the Commission of Conservation makes the following points:—

Its Effect Upon Natural Resources.

"Materials, labor and time, the basic elements of our real created values, are absolutely and irrevocably lost in the destruction of property by fire. The enormous insurance tax imposed upon the people to indemnify and replace property is powerless to re-create the materials destroyed. This fact is of large significance to the future prosperity of the Country.

Of the material resources chiefly affected by fire, forests furnish the most conspicuous example. The standing timber of portions of Canada is fast approaching exhaustion. No fewer than 20,700 buildings of frame construction were destroyed by fire in Canada during the last four years, with a total loss of over \$14,000,000.00. Approximately \$8,000,000.00 of lumber value was burned in buildings of other

than frame construction. Lumber yard fires contributed another \$6,500,000.00, and the destruction of wood products in process of manufacture, \$3,725,000.00. These figures merely represent readily ascertainable values are doubtless incomplete. They demonstrate, however, that fire is largely responsible for the depletion of our lumber supply, even apart from forest conflagrations. If it be the duty of the State to promote the public welfare by the prevention of forest waste, the broader application of the principles of conservation should extend to the protection of created values. In the last analysis, the loss by fire of a city dwelling is even more important to the people of Canada than the loss by fire of timber in the public domain. Both the building and the timber are assets of the nation. If they are destroyed, these assets are wiped out. No system of taxation will serve to restore them whether the tax be collected by constituted authorities under the law, or by private interests as premiums on Policies of Insurance. Reforestation costs money, which must be levied through taxation in some form. Replacing buildings destroyed by fire costs money, a large proportion of which, by means of insurance, is assessed against property which has not been burned. In both cases, the cost is borne by the people of Canada, as a whole, and is, therefore, a matter of public concern.

Its Effect Upon Commercial Credit.

The commercial assets of a Country are largely its created and improved resources. Their sale and exchange have necessitated elaborate systems of credit. The enormous domestic and foreign commerce of Canada would be hopelessly wrecked in any attempt to conduct business upon a cash basis. We have outgrown the monetary systems, and cannot restrict our buying and selling to the limits of our gold reserve. Modern commercial organization and methods are dependent upon a highly developed credit system. If cash were demanded for all our obligations the nation would be bankrupt.

The extent of our business having outgrown our cash assets, it follows that in the integrity of our credit system lies the stability of the whole commercial fabric. Every form of currency given or received in the course of barter or exchange represents actual value, either of fixed property or merchandise. If this property is in any manner destroyed the great fabric of credit is directly impaired to the amount of the loss. Under such conditions fire insurance is practically compulsory. There must be some guarantee that all basic securities are safe from the risk of elemental destruction. Credit is not extended to a merchant, manufacturer, or business man unless his stock of goods, merchandise in transit, or material in process of manufacture are covered by insurance. Neither can loans be obtained on real estate unless all buildings are insured. In principle and practice, insurance and sound credit are inseparable, and the business of insurance is directly interwoven with the entire commercial and financial activities of the country.

While the losses due to fire may be indemnified by insurance, frequent and excessive losses adversely influence the extension of credit. The individual having frequent fires upon his property is regarded with distrust in commercial circles. The city with a high average fire loss is at a disadvantage in municipal financing. No bond broker cares to sell the debentures of a community whose taxable values are continually disappearing in some. The assets of a well governed municipality, that does not permit its citizens to endanger their own or their fellow-citizen's property, are considered better security. When, year after year, the created resources which sustain all credit relationships are needlessly wasted by fire, the very foundation of the commercial standing of the country is being profoundly affected.

Its Effect Upon Industrial Progress.

The cost of production of manufactured articles in Canada is largely increased by the extent of the fire loss. Competition with foreign countries in many lines is hampered. It is estimated that the cost of fire insurance in Canada is five times greater than in Europe. This extra cost of insurance is largely the result of Canada's excessive fire waste, and constitutes a fixed charge entering into the selling price of every commodity. The taxation levied for the maintenance of municipal fire departments also increases the cost of manufacturing in all protected cities in Canada. In a general way, this tax

may be said to be six times greater than in Europe. Such a comparison is not entirely reliable, however, as fire brigades in many continental cities are Government institutions, and in consequence, are maintained without directly affecting the property owner.

The destruction by fire of any one insured property taxes every Policy holder, and, ultimately every individual in Canada. Fire insurance is merely an agency for the distribution of losses, and the companies are trustees of a common fund. Insurance rates, fundamentally are a nation wide asset of the cost of fire. About one half of all insurance premiums collected is returned to the insured for loss sustained. The balance is retained by the companies to defray expenses incidental to conduct in the business, and as profits. If unduly numerous or large fires swell our total loss to a dangerous extent insurance rates are automatically raised everywhere throughout the country until the half of all collections is adequate to pay the loss.

The public regards disastrous fires with but little concern, holding the popular but erroneous conception that the insurance companies pay the loss. The absurdity of such an assumption is manifest. They could not do so and remain solvent. In the event of a conflagration, such as that in Toronto in 1914, the insurance companies poured into the City \$10,000,000.00 that had been gathered from all parts of Canada. The people of Halifax and Vancouver helped to rebuild Toronto. It is this comity of interest through fire insurance that enables recovery from the effect of fire.

Every individual in Canada is made to contribute directly or indirectly his or her share of the loss. The average policy holder is inclined to consider the question of fire insurance rates as affecting only the cost of the policies upon his own property. The fact is generally ignored that the price of every article necessary to existence is charged with a proportion of the fire cost. The tax is indirect, and the exact amount is difficult to determine. The average consumer pays it unconsciously and, therefore, willingly. A loaf of bread bought at a retail store bears the cost of insurance upon the buildings and stock of a retail store, bakery, flour warehouse, flour mill, terminal elevator, country elevator and farmer's barn. In this manner, something is taken from the earnings of every man to pay the cost of fire; a portion of all labor and industry represents the unproductive effort of restoring values that have been carelessly destroyed. The burning every year of millions of dollars of created value increases the cost of living and is, therefore, of vital interest to the community."

Losses in Canada Compared with Other Countries.

That Canada enjoys the unenviable reputation of the largest per capita fire loss of any country in the world is easily evident from a comparison of the figures appearing in the following diagram:

Canada, \$2.73.

United States, \$2.26.

France, \$0.74.

England, \$0.64.

In seeking an explanation for the cause of this unfavorable comparison, there is no doubt but that "carelessness," due to a lack of the proper sense of individual responsibility is an important factor. The difference between the American and European temperament has been tersely stated by Hon. Robert Stone of the Kansas Legislature, in the following language:

"We are a nation of money-makers, Europe is a people of money-savers; we are a people of waste, they are a people of thrift. We figure that the most important thing is to make a dollar, and they, that it is of equal importance to save one. This is evidenced in our hurried construction of inflammable buildings, and in their slow and solid masonry; in our willingness to pay a high rate of fire insurance with the attendant risk, and their insistence on a low rate and unceasing care; in our elaborate fixtures for the putting out of fires, and their precaution in preventing fires. We regard fire as a misfortune and sympathize with the man who has had one; they regard fire as a crime and investigate and punish the man who is guilty. Our temperament is also shown by the different view we take of an insurance policy. Here, if our property is insured and we have a fire, we do not count it as a loss—simply that we have transferred the loss to other and distant shoulders. There, the insurance is regarded as a tax which is ultimately borne by every one. Here, we regard insurance as a gamble; there, it is regarded as a means of reducing the loss to a certainty and borne by the whole community. Here we figure that the insurance company restores the loss; they, that it really indemnifies the owner for a loss which can never be restored. Here, we figure a fire is an exchange of property for the ready money; there, they figure that a fire is an absolute loss of toil and natural resources. We figure a fire is a misfortune, they figure a fire is a crime. We endeavor to extinguish the fire; they labor to prevent it."

Fewer Fires Mean Lower Premiums.

In commenting upon the inexcusable fire waste permitted to continue even in war time, "The Bulletin" in a recent editorial, observes

that "every investigation of fire insurance rates that takes place at last gets down to the fundamental fact that fire insurance premiums measure the fire losses, and that the only way to get lower premiums is to have fewer fires; and that, accordingly the solution of the fire insurance tax problem lies along the line of fire prevention and cannot be solved by any Government regulation of the fire insurance business."

In fighting the enemy abroad let us not forget the common enemy at home. "To arouse the people against the fire foe," says Hon. Walter L. Fisher, secretary of the U. S. Department of the Interior, "is our greatest task." There is no difference regarding the essentials. The average citizen will admit that our fire waste is in the nature of a national disgrace. The task is to make him do something to remedy conditions. It seems ridiculous that a people so eager to seek out and destroy the mysterious and hidden enemies of mankind should be so slow and sluggish in fighting a foe so plainly in sight and so readily vanquished. We have led the world in seeking out the causes of pestilence and removing them. We are in the vanguard of the battle against tuberculosis, typhoid and other malignant diseases. Still, we stand apart and let the older nations lead the fight against an enemy much more easily conquered.

To relieve the people of the unnecessary burden which they are now carrying, we must teach them the importance and significance of that burden, and show them necessity for defence against the common enemy. Let the people once realize the exact facts of their negligence and they will be swift to provide a remedy.

Remedies to Prevent Sacrifice of Life.

The conditions in the United States are so similar to the conditions in Canada that we can easily apply the same remedies for the needless sacrifice of human lives and property by fire as recommended by the National Fire Protection Association at their annual convention in Chicago, at which Canada was well represented by men prominently interested in the fire insurance business, and representatives from the Fire Marshall's Office of Ontario.

1. The adoption by municipalities of the Standard Building Code of the National Board of Fire Underwriters to the end that fire-resistive building construction may be encouraged, the use of inflammable roof coverings prohibited, adequate exit facilities from buildings assured, and interiors so designed and fire-stopped as to make easy the extinguishment of fires therein.

2. The adoption by all states of minimum building requirements for the protection of State and County hospitals, schools, asylums and similar institutions outside city limits, and of small communities in which the establishment and enforcement of a building code is impracticable.

3. The enactment by each state of the fire marshal law advocated by the Fire Marshals' Association of North America to the end that official investigation may be made of the causes of all fires, preventable fires may be eliminated by public education, and the crime of arson stamped out.

4. The adoption of the Association's suggested ordinance providing for the systematic inspection of all buildings by city fire marshals or local firemen to insure the vigorous enforcement of rules for cleanliness, good housekeeping, and the maintenance of safe and unobstructed exits, fire-fighting apparatus and other protective devices.

5. The enactment of ordinances similar to that of Cleveland, Ohio, fixing the cost of extinguishing preventable fires upon citizens disregarding fire prevention orders, and a more general legal recognition of the common law principle of personal liability for damage resulting from fires due to carelessness or neglect.

6. The wider general use of the automatic sprinkler as a fire extinguishing agent and life saver and the more general adoption of the fire division wall as an important life saving exit facility.

7. A careful study of the technical surveys of cities made by the engineers of the Committee on Fire Prevention of the National Board of Fire Underwriters covering the items of water supplies, their adequacy and reliability, fire department efficiency, fire alarm systems and conflagration hazards, and of the possibility of co-operation among neighboring cities through mutual aid and the standardization of hose couplings.

8. The adoption of the Association's suggested laws and ordinances for state and municipal regulation of the transportation, storage and use of inflammable liquids and explosives.

9. The universal adoption and use of the safety match and legislation prohibiting smoking in all parts of factories, industrial and mercantile buildings except in such fireproof rooms

as may be especially approved for the purpose by fire departments.

10. The education of children and the public generally in careful habits regarding the use of fire.

11. The co-ordination of all these activities, through a central administrative officer or body of the state or city having primary jurisdiction, for the purpose of promoting uniformity of action and efficient co-operation.

In the furtherance of these objects the Association appeals for the co-operation of all citizens. It asks them to help in the dissemination of its valuable literature and in the use of the standards of fire protection so carefully worked out by its committees to the end that the lives and substance of our people shall not continue to be dissipated by a reckless and easily preventable waste.

The people of Canada are fortunate in having in the person of Mr. J. Grove Smith of the Commission of Conservation, a man who has made an exhaustive study of fire waste and fire protection in Canada. His services as expert for the Dominion Government are available in towns and municipalities interested in improving the conditions of fire prevention and protection. His book on "Fire Waste in Canada," published by the Commission of Conservation, is available to any individual interested in this important subject, and offers many helpful suggestions for the reduction of our enormous fire waste, in addition to other valuable information which it contains.

Splendid Work of the Fire Marshalls.

In several of our Provinces we have Fire Marshalls who are doing splendid work in collecting data and statistics upon which intelligent conclusions can be based, in addition to the benefit to be derived from the investigation of fires, and the educational value which

the public is receiving from the publicity given to the special work of their department.

In most of the larger centres we have competent fire chiefs who are conscientiously endeavoring to provide a means of reducing the local fire hazard by systematic inspections of manufacturing and mercantile establishments which have largely contributed to make up the total annual fire loss in this country, of roughly \$24,000,000.00, in addition to the human lives which are lost every year through the same cause.

We have passed laws clothing these different officials with authority in the interest of fire prevention and protection. Are we going to hamper them with political red tape, or are we going to give them our unqualified co-operation and support in so far as they are conscientiously endeavoring to discharge their responsibilities for the public safety and welfare?

In the answer to this question, with such further measures as we may adopt, rests the solution of the problem we have been considering.

This is the first of a series of articles which Mr. Hardy, who is a widely known authority on insurance matters, and more particularly as they affect the lumbering interests, has in preparation for the "Canada Lumberman." The others will appear in the near future and will deal pointedly with the following phases of the question of proper protection for property:

"Lumber mills and How to Build to Secure the Lowest Insurance Cost."

"Adequate Protection of Increasing Values as Applied to the Lumber Industry."

"Importance of Insurance as the Basis of Credit in Lumber Business."

Canadians are Industrial Masters of Forests

They are Playing a Mighty Factor in Production—Their Methods and Achievements in Lumbering Operations are Warmly Praised

Col. W. B. R. Hepburn, M.P.,
Picton, Ont.

From all sources there come to the Canadian press glowing tributes, not only to the dauntless courage and fighting strength of Canada's "Tommies" in the front line trenches, but also with respect to the industry, patience and resources of the Canadian Forestry Corps. In the last issue of the "Canada Lumberman" there appeared from the pen of Harold Begbie an article in which particular reference was made in the London Daily Mail to the energy, driving force and organizing ability of Brig.-Gen. Alex MacDougall, who is at the head of the Canadian Forestry Division. Since then appreciative reports have arrived, from Edward Price Bell who has been sending special despatches to the Canadian and American press in regard to the

services taking him frequently to France and different parts of England and Scotland. On New Year's Day, 1918 Col. Hepburn was given the distinguished honor of being made a Commander of the Order of St. Michael and St. George.

Speaking of the Canadian Forestry Corps, Edward Price Bell says: Is this corps—this bit of Canada abroad—economical, efficient and important in respect of the quantity of its production? It is a question, I think, with a bearing, not only for Canada, but for all the nations struggling for permanent peace and liberty. And why? Because in this war the interests of the democracies are identical; weakness anywhere among them is weakness everywhere among them; strength everywhere among them.

By courtesy of Gen. Alexander MacDougall, C.B., chief of the Canadian forestry corps, and of the officers of his staff, I have had an opportunity to inspect in detail a number of the Canadian forestry camps in England. I have seen the men at work in the bush and in the mills. I have inspected their hutments, their recreation quarters, their vegetable gardens, poultry houses, piggeries, I have seen them building light railways, stacking timber, loading timber, and doing all the diversified tasks attaching to stirring lumber camps. To my mind, untrained, I admit, in such things, it seemed that everything moved in response to perfect knowledge and resolute will.

Cost of Production Compared.

But I can quote an authority on the methods and the achievements of the Canadian forestry corps. I can quote Sir James Ball, controller of imperial timber supplies—not a Canadian, but an Englishman.

"What do you think of the Canadians in the timber?" I asked of Sir James.

"They are my sheet anchor," said he.

What is your opinion of the staff?"

"Remarkably conscientious and competent."

"Is it too large?"

"I don't think so."

"Is the cost of production too heavy?"

"You can't compare the cost of timber production here with the cost of it in Canada or the United States. There lumbermen have a free hand and large trees. They can go whither they like—can follow the line of least resistance, of highest and cheapest productivity. Here we are beset by obstacles. We must approach the timber by

activities and hustling qualities of the lumber-jacks and woodsmen who constitute a very important unit in our national defence schemes. Mr. Ball quotes Sir James Ball, Controller of Imperial Timber Supplies, who is an Englishman and not a Canadian, and this leading authority not only praises Gen. MacDougall, but also Col. W. B. R. Hepburn, C.M.G., M.P., assistant director, Overseas Forestry Corps. Col. Hepburn was born in Picton, Ont., in 1876, and after spending several years with navigation companies and holding several responsible positions, he was elected to the House of Commons, representing Prince Edward County in 1911. He was returned during his absence in England in December last by a large majority. Col. Hepburn joined the 224th Battalion—the first Forestry Battalion—as major in the spring of 1916, and later was promoted to the rank of Lieutenant-Colonel, and afterwards became Colonel. As further Forestry Battalions were recruited, his duties were enlarged, and he has practically been in charge of the detail work of the division, his

ways that, as far as possible, spare adjacent estates. Besides, the timber is scattered. We can work only a certain while in one place. Then we must shift our plant. This takes time and costs money. Moreover the bulk of our trees are small, and the smaller the trees the larger the cost of producing a given amount of lumber.

Feeders for the Advanced Camps.

"It also should be remembered," continued Sir James, "that our forestry camps in England are partially training camps, in other words, they are not only industries but schools. We must whip inexperienced men into shape. Our camps though they produce a great deal, are principally feeders for our more advanced camps in France. We must be always thinking about tonnage. The greater our production in France the lighter the burden we impose on the cross channel shipping.

"It is unreasonable to expect us to have forestry schools attaining to the level of output of fully matured camps. Furthermore, the military element—an indispensable element—should not be overlooked; the military element in industry never does and never can improve its normal standards. Yet we drive forward vigorously, and we have in Gen. MacDougall, Col. Hepburn and their junior officers aids with whom we could not dispense.

"Before the war we imported 90 per cent of our timber supplies. With the help of the Canadians, the Newfoundlanders, and a unit of New Englanders, we have whittled down the imports to a small figure freeing tonnage for other services in the war. In 1913 we imported 11,600,000 tons; last year we imported 2,875,000 tons.

"The movement of the figures is steadily in the right direction. Prior to the war we imported 3,500,000 tons of mining timber; this year we shall import only 500,000 tons. Great Britain will produce 3,000,000 tons. This is equivalent to 600,000 cubic feet, or 1,200,000 feet board measure. Without our co-workers from North America, this feat would be out of the question."

From 90 to 95 per cent of all the timber now consumed in this country is devoted to national war service. Furniture making for private use has practically ceased. Timber goes to the troops to revet trenches, construct dugouts and mines, and for other purposes. Scores of thousands of tons of logs are converted into pit props. South Wales alone uses 120,000 tons of mining timber annually. The demands of the shipyards are heavy. Aerodromes and aeroplanes require timber. An enormous quantity of wood is necessary for hutments, munition boxes, axe handles, spade handles, cant hooks handles, vans, cars, lorries, gun carriages and a thousand other uses imperative in the prosecution of a great war.

So we find it is not true that success in war springs wholly from the mine; it owes a mighty deal to the forest. And by universal assent the Canadians have no European rivals in their industrial mastery over the forest.

Roland Hill, correspondent with the Canadian army, writing from northern France, says:

"The Canadian 'Army behind the army' in France has grown until to-day it is rapidly approaching the strength of the fighting Canadian force and each of its units does its daily share in helping to defeat the enemy. Take that section of the Canadian Forestry Corps which has been lent to operate for our French ally. The first company was sent out as an experiment, the French offering equivalent forests nearer the British army zone in return for the timber the Canadians cut for them. How the experiment has developed may be gathered by the figures just published that those Canadians have cut and delivered to date to the French over one hundred million feet of lumber. It is an all-Canadian enterprise, practically the entire plants having come from the Dominion.

This Canadian settlement is a complete army in itself and a splendid tribute to Canadian organization. There are road repair units, hospitals—which have done humane work in attending also to French civilians—dental services and machinery repair shops. Rations are supplied by both French and Imperial Army Service Corps and have always worked in harmony.

Sent to Forest Near Swiss Border.

In May it was decided to enlarge the operations and co-operations, and three companies were sent to the forest near the Swiss border. The personnel of these companies were French-speaking Canadians from Nova Scotia, direct descendants of the old Acadians.

Three other companies followed and started operations in another forest. In this case water had to be pumped from a village at the foot of the mountain a mile away. The Canadians enlarged the water supply of the village and not only supplied their mills, but also furnished water for a narrow-gauge railway.

Three mills, begun as an experiment, have shipped a total of eighty thousand feet of sawn lumber. Motor tractors and light railways, some of which run by cable over the mountains at a grade of forty-five degrees, have taken the place of the old ox teams which

used to laboriously haul the big logs to the little water-power mills in the valleys.

Canadian Operation in the Vosges.

In July of last year, at the request of the French Ministry of War, it was decided to start another Canadian operation of the same kind in the Vosges Mountains. Two new mills were set up. It was a lumber operation which the French had declared impracticable, but they gave the Canadians every assistance. Owing to the steep mountain grades engineers decided to put their mills in the valleys and to lower the big logs—they rival in size the best British Columbia can produce—by cable railway. These railroads have been a tremendous success and French engineers compare them to the wonderful system which the Italians use in their mountain warfare.

Two Canadian mills are sawing from this forest.

Last April another Canadian mill was put into operation, tapping a further big forest. A bandsaw mill was added to this plant and now all kinds of thin lumber needed for the construction of huts are being made.

The year's operation, for the French Government, shows approximately twenty-five million feet of lumber manufactured and delivered to our allies, and all of it has been done by Canadians whose medical rating, either because of age, disability, or wounds in active service, prevents their being used in the front line. They are part of Canada's army behind the army.

Retailers' Convention will be a Hummer

Tuesday and Wednesday Sept. 3 and 4 are the dates which the retail lumbermen of the Province of Ontario are keeping in mind for it will mean the first annual convention of the trade in Toronto. An interesting and instructive programme has been prepared and the visitors will have an opportunity to see the great Canadian National Exhibition under most favorable opportunities and, at the same time view Toronto in her most attractive garb and during the most delightful month of the year. Business and pleasure can be combined and from assurances received by Secretary, H. Boulton, it is believed, there will be a record breaking and most representative attendance from all parts north, south, east and west.

On the first day, Tuesday, Sept. 4, the visitors as they arrive will proceed to the Board of Trade rooms in the Royal Bank building, corner of King and Yonge streets, and will there register. It is expected that this will take up most of the forenoon along with certain other routine.

In the afternoon at two o'clock there will be a general business meeting over which Thomas Patterson, of Hamilton, will preside. Important question and timely practical addresses will be given and reports presented of standing committees. There will be opportunity for general discussion.

In the evening at eight o'clock at the Royal Canadian Yacht Club on Centre Island a unique event will take place in that the retailers will be entertained to dinner by the Wholesale Lumber Dealers Association of Toronto; a splendid programme is being arranged. This completes the first day's proceedings.

Will Spend Day at the Exhibition.

On the second day of the convention—Wednesday, September 4th—it will be a special round of the big exhibition which will then be at its best. Every delegate is asked to stay the full two days and will never regret it as he will see more in that short period than he could possibly do any other time. The Directors of the Canadian National Exhibition are joining in the welcome to the lumbermen and special privileges will be accorded the guests. Admission to the grounds will be complimentary and a section of the grandstand will be reserved in the evening for the witnessing of the night attractions which are more elaborate this year than ever. The officers of the Ontario Retail Lumber Dealers Association will be the guests of the Directors of the Exhibition at the noon day luncheon on Wednesday, September 4. For the members a large tent is being provided which will serve as a meeting and resting place.

Every retailer in Ontario should make it a point to be in Toronto on Tuesday and Wednesday, September 3 and 4. He will learn, hear and see much at the first annual convention of the retail trade, and it will be an occasion well and profitably spent in every way.

Women cooks, flunkies and waitresses have now been introduced into the spruce-logging camps of the Northern Pacific Co. on Cumshewa Inlet, Queen Charlotte Islands. The innovation was made upon the suggestion of A. E. Munn, manager of the company and president of the B. C. Loggers' Association, in order to release more men, some for the army and others to take out spruce for aeroplanes. The women selected are dependents of soldiers, are paid good wages, are given first cabin accommodation on the boats and are housed in separate cottages at the camps, with two women to each cottage. The innovation is stated to have worked out thus far with complete satisfaction.

Is Motor Delivery Cheaper than Horses?

*What Representative Retail Lumbermen Have to Say on an Important Question—
Dealers in Large Cities Generally Endorse Motors*

No more important feature, outside of keeping a well selected and well balanced stock, characterizes the business of the retail lumberman to day than that of furnishing a prompt and reliable delivery. It is one of the strong links in the chain of satisfactory service and attention to detail. Help is scarce wages high, and the price for all kinds of horse feed soaring. Does it pay the average yard man to use a motor truck or trucks, of what horse power should they be and of what capacity, is the use of trucks satisfactory and economical in the smaller cities and larger towns where the distances to be covered are not nearly as great as in the more populous centres and how do costs compare with horse delivery?

In smaller places, customers are not so widely scattered and the hauls being shorter, does it pay the retail lumberman to invest in motors? This is the question which has been asked by the "Canada Lumberman" of many representative retailers. Their views and comments will be read with interest, not only by those operating trucks but also by any lumber merchant who may think of making an investment in this line but hesitates perhaps owing to the rather quiet state of the building situation, the conditions prevalent due to the war the initial outlay and absence of exact knowledge in the expense of operation, up keep etc.

The experience of others is always interesting instructive and helpful. The observations of users of trucks and others are presented so that definite information may be gleaned and readers aided perhaps in the perplexing problem of delivery.

Truck Saves Fifty Dollars Per Month.

A leading Brantford firm says: "We have in use one motor truck of one and a half ton capacity and 20 H.P., which we have found very satisfactory. During the months of April and May this truck delivered 167 orders to the value of \$3,769.00. It cost us \$33.33 for Gasoline, \$4.20 for oil, \$18.83 for repairs and \$168.00 for wages, making a total of \$224.36. Allowing \$20.00 a month depreciation on the truck, our total cost would be \$264.35.

"Beside these deliveries the truck worked unloading cars etc. It would have required, at least 2 horses to do the same amount of work, which with feed, wages, repairs etc., we figure would cost at least \$360.00 for this same period, and not allowing any depreciation on the horses etc. This would show a saving of about \$50.00 per month.

"Another great advantage is that a rush order can be delivered to a customer in much better time."

From Kingston, Ont., comes another opinion in favor of the employment of motor truck delivery. The firm, say that they have been using a one ton motor truck for about a year, which is made by attaching a form-a-truck to a small four cylinder car of about twenty horse power. They add: "We find its use very satisfactory because of the fact that we can cover greater distances in the same period of time. It does from two to three times as much work, as a one horse wagon. The engine is geared down to an average speed of about ten miles an hour, which is fast enough for hauling loads on the ordinary roads.

"We have not available, the costs as compared with horse delivery. We do not think that they are any lower than the charges for horses and waggons, but in these times when labor is scarce and work must be done, we do not think the charges should be scrutinized too closely. It is a considerable satisfaction to feel that one can make delivery of an order, six or ten miles away, even if the delivery cost is a trifle higher, as it sometimes enables a customer to place an order, when teams are not available. We use our truck for light loads and long trips and use our teams for short trips and heavy loads. We would recommend any one contemplating the purchase of a truck for lumber use, to get one with a capacity of two or two and a half tons and a body long enough to load 16 ft. lengths."

Why Some Do Not Use Motors.

From St. John, N. B., comes word that there is only one firm in a large line in that city who use motor trucks while there are two

wood-working plants that each have one other dealers in lumber use scows, schooners, tugs, etc., as their deliveries are mainly along the water front.

One man in New Toronto says that he uses a Fox trailer for his Ford car and finds it a valuable asset as it saves times on small deliveries up to one ton. A Brockville dealer writes that he has considered the matter on different occasions of using trucks and that he has six horses. He thinks that one truck could be used to good advantage except in winter and thus cut down the yearly cost of stable.

Another yard man in an eastern Ontario town humorously replies "We do not see how we could use trucks here in the winter time especially as the snow stays where it falls until the sun moves it in the spring time."

"I do not employ a motor truck as I do not believe there is one sold at a reasonable price, made to handle sixteen foot lumber satisfactorily," remarks a well known Hamilton dealer.

"No! we do not use motors for delivery our reason is that the distance here is too short to make them profitable in view of the fact that we would have to keep both truck and teams," declares a Newmarket dealer.

Large City Dealers Favor Trucks.

Inquiry from firms in several towns and smaller cities reveals the fact that few lumber retailers use motor trucks. They state they have to keep horses in any event and the distance of the hauls is so short that the ground can be easily covered without loss of time. On the other hand in Toronto, large percentage of retail yards make use of trucks. In Hamilton and Ottawa there are a fair number in commission and the practice of motor delivery appears to be increasing. One Hamilton firm state they have decided so far not to replace horses with motor trucks. They have to make too many deliveries off the pavements and do not think that trucks are satisfactory in deep snow. Another firm in the same city assert that they have started to use a thirty-five h.p. motor truck of one and one half tons capacity.

Out of a dozen representative retail lumber firms in Toronto interviewed by "Canada Lumberman" nine use motor trucks. One company state, "Owing to our location below the railway tracks, we think the grade of the hill and poor condition of the roads are such that for, at least, two months in the year the employment of trucks would be impossible, every make of truck used in our locality "fell down" last winter.

Here are the opinions of half a dozen concerns who view matters differently, "We have one truck of one ton h.p. and find its use satisfactory in the summer. It does the work of two horses and costs while in operation about the same."

"We have two trucks of one and three horse tons. They show a great saving over horse delivery on long hauls; on short hauls the difference is not so great but is in-favor of the truck if road conditions admit of their use."

"Yes! we, have three trucks of 30, 35 and 40 h.p. and of one, three and five ton capacity. Service in the matter of delivery can only be accomplished by rapid transportation and on long hauls we consider that motor trucks are the only means. Our 60 h.p., three ton truck gives us satisfaction, we believe that its use is preferable and more economical than horses owing to the high cost of feed and labor, which is very scarce at present. We are thinking of adding a one ton truck."

"The use of trucks is satisfactory but the cost is higher than horse delivery. We have two trucks, a one ton and a three ton."

"Trucks give fair satisfaction and the cost of delivery is about the same as horses; on long hauls and with full loads from one pile they are economical but for short mixed loads we consider that horses are better. We have two trucks of 25 and 30 h.p., of one and one half tons and three tons capacity."

How the East Sizes Up the Situation.

Speaking of delivery conditions in Ottawa and the use of motor trucks in that city a correspondent of the "Canada Lumberman" says:

Divergent views are expressed, as to whether the horse system of delivery taken the year round, is cheaper, as efficient and as satisfactory as the work and cost of the motor truck. There is not much ground on which to form a comparative basis.

The era of the horse versus the motor truck, as applicable to the

retail trade exists. In other words the day of the "horse or the truck?" has arrived. Maybe it took some time to reach Ottawa, so far as the lumbering trade is concerned, and maybe it didn't. Both the horse and motor delivery systems have their supporters. In a nutshell some believe in horse delivery and other's don't. Time, experience, and proven operating costs and well supported knowledge will be the referee.

Only one purely retail yard in Ottawa city uses utilizes motor transportation as part of its delivery.

The history of motor truck delivery, as applicable to the retail yards at Ottawa, is rather brief as lumbering operations go. Between fifteen and twenty months would account for the entire period of operation. There are three or four motor vehicles here used in the retail lumber trade partly or wholly.

The question of motor versus horse is a big one at the present time, but with the outlook toward business being none too brisk some operators are not inclined to switch over from the horse delivery for trucks or motor transportation.

Exclusive of the number of horses one firm uses in its retail business there are about one hundred equines used by Ottawa retail yards. The actual or real average cost of feeding these hundred horses is hard to determine, as some companies do not care to give out such information. One operator said he had not figured it up, and others estimated their horse food costs all the way from seventy to seventy-five cents per day to as high as a dollar and a half for food and shoeing. Four of the companies giving their costs are as follows; James Davidson's Sons from seventy to seventy-five cents per day for food. George M. Mason about ninety cents per day exclusive of shoeing, M. C. Neate Lumber Company from seventy-five to one dollar per day for food and shoeing, McAuliffe-Davis Company one dollar and a half per day for food and shoeing. In addition to all these costs however, has got to be considered the upkeep and repair of waggons, sleighs, harness, blankets, salary of a stableman etc. Then a driver's salary for each horse or team has to be added. All are just and proper charges, chargeable to the delivery service.

Does Truck Do Work of Three Horses?

In motor operation as everyone knows the chief expenses are, gasoline, oil, tires, and repairs both minor and major. Then there is the cast of the vehicle itself entailing quite an outlay. But the motor car needs only one driver, does not consume its feed when not working as a horse does, and does not need a stable man to look after it. Besides the claim has been made by a "Form-a-truck" operator that one truck does the work of three horses and sometimes four.

Allowing one and one half dollars per day for upkeep of horse, shoeing, vehicle and harness maintainance and say two dollars and fifty cents per day for a horse delivery rig, the amount would be four dollars per day per rig or twelve dollars for three rigs on a similar basis. The cost of upkeep of the "Form-a-truck" as furnishing a comparison on a year's operation were given to be between \$4.40 and \$4.70 per day, taking care of gas, oil, minor repairs and driver. The fluctuation is due to driver's salary on the basis of working an eight or a nine hour day.

Meagre though the information offering comparative figures is, some deductions can be made, as follows; Taking three hundred working days as a year, three horses at the rate of one fifty per day for food and maintenance of vehicle and two fifty per day for a driver would mean for three single horse rigs a cost of \$3,600, or coming down to the nine months of operation covered by the motor truck \$2,700. If a one horse rig, and a team were operated allowing the same general charges but deducting two fifty per day for the salary of the unrequired second driver of a team, it would work out at \$1,200 for the single horse rig and \$1,650 for the team. On nine months operation it would mean nine hundred dollars for single rig and \$1,237.50 for the team. In all \$2,137.50.

Supposing on an operating period of nine months of the year a motor truck such as run by one local company performs the work of three horses at an average cost of \$4.00 per day for two hundred and twenty-five days, it would give an upkeep expense of \$900. Allow for the next three months whilst it is unoperated a charge of two hundred dollars for storage and major repairs, etc. That would mean \$1,100. Three horses on separate rigs for the period would cost \$3,600 or for nine months \$2,700, or a one horse rig and a team \$2,850. That is for nine months or seventy-five per cent of a charge based on a full year's operating conditions. But it does not mean that the horse the year round on a single delivery costs the operator four dollars per day.

Business falls off in the winter and there are not as many local orders. Consequently the same standard of delivery service has not to be maintained. Not as many horses for delivery are required, but the animal in the stable goes on eating just the same. He is not wearing out as many shoes as in the summer and the waggon repair bill will be carried on by the cost of sleigh repairs. Where it fits in, of course, retail sellers who also conduct lumber manufacturing op-

erations and woods camps are in "clover" because any surplus horse power they have they relegate it to the woods and utilize it the "year round". The motor truck in the winter season generally stays in the garage or a repair shop.

What Cost Figures May or May Not Prove.

No seemingly accurate figures as to the value of the horse used in the spring, summer, and fall months, in retail delivery, as compared with his value and cost of upkeep in the woods for the three remaining months were available. In making the comparisons above it must be remembered that the highest figure mentioned as to horse operation was chosen. If, for instance, a lower figure say one dollar per day food and maintenance of horse and vehicle, harness, stabling, etc., were included, and the drivers salary remaining stationary, it would mean a cost proportionately of seven-eighths of the foregoing mentioned amount. The debate, argument or expressed belief could be indefinitely conjured or argued for or against on the incomplete figures at hand, and the claims and representations made by the sponsors of either motor truck or horse delivery.

Two chief points appear to exist, summarized as follows; The horse delivery man argues the motor truck is all right for the summer months or a big retail trade in a large city, operating on good roads. The motor truck advocate says that his truck does the work of three horses for nine months of the year, and gives more satisfactory and quicker service to customer.

But differences of opinion often arise in the best regulated families, and the lumber trade generally might well be reckoned as a big national family. By the same token different views have been expressed by an operator of motor truck delivery as to the feasibility and advisability of utilizing heavy trucks and higher price machines as compared with lighter and lower priced motor outfits? Lower initial outlay, less expense per car for maintenance and repairs, and a lower cost for operation are some arguments that have been advanced in favor of the lower priced or light trucks.

Varied Views of Montreal Trade

One leading firm in Montreal, who use six trucks, expressed the opinion that trucks are on the whole satisfactory, and the fact that they have added to their fleet is an indication that the truck is efficient as well as economical. One secret of success in motor trucks is to make a full load for delivery on one job; a light truck might be used with advantage in making say two or three deliveries, but not so with the heavier descriptions. Another secret is to have your own repair shop; to send out out a truck for repair in case of breakdown meant delay and heavy cost. It is only by experience that one learned how to economically manage trucks, and the first year is a period when mistakes in loading and routing will be made—and this involved expense. The experience of the firm, and they have records to prove it, is that trucks are cheaper than horses—although it must not be forgotten that trucks are not available during the entire year owing to weather conditions.

Another dealer in the commercial metropolis said that, for rush work, trucks are admirable, but for general purposes they prefer horses—one reason being that the truck represents a heavy capital investment, equal to many horses. If the truck has to be repaired it involves the entire investment being idle, perhaps for three or four days, whereas in the case of a horse it means that only a small portion of the total capital investment is locked up. The edict of the Quebec Government limiting the use of trucks to the 3½ ton type in the rural districts has to a certain extent diminished the value of truck haulage.

Where the roads are good the truck is economical, but where the roads are bad—and this often obtains where delivery is made to jobs in comparatively new districts—the expense is higher when compared with horse haulage. This is the view expressed by an officer of another company, there being three lumber concerns in Montreal who use motors for delivery purposes. Another fact brought out as the result of the firm's experience is that the truck is excellent when say a large delivery of lumber has to be made on one job. When, however, delivery has to be made to several jobs by the same truck the expense increases at a great rate as compared with horses, inasmuch as delays are more expensive in the case of trucks than in the case of horses. This is looking at the matter from the capital investment point of view, trucks costing more than horses and rigs. Where lumber is wanted in a great hurry and the roads are good, then the advantage is with the truck, but taking into consideration the fact that trucks cannot be used all the year around, and the general condition of roads, horse haulage is cheaper.

The Japan and Canada Trading Company, Ltd., has been incorporated with head office at Victoria, B.C., and capital stock of \$10,000, to carry on business as importers and exporters and otherwise deal in lumber, wood pulp, etc.

New Brunswick Lumbermen Organize

Elect Strong Body of Officers and Adopt Measures for the Success of the New Association

W. B. Snowball, Chatham, N.B.,
President of the Association

The lumbermen of New Brunswick have organized an influential and aggressive organization known as the New Brunswick Lumbermen's Association. At the inaugural meeting held in Fredericton recently there was a large and representative attendance and much enthusiasm was aroused.

The essential objects of the association are to protect the rights and to promote the interests of the owners of forest lands, uphold the welfare of the industry in general and improve and elevate the conditions surrounding it. A constitution and by-laws have been adopted and active alert officers elected. The prospects of the new organization are most promising and from the interest which has been aroused the membership will continue to grow and strengthen.

The officers elected were as follows:—

President, W. B. Snowball, Chatham, N. B.

Vice-president, Donald Fraser, Edmundston, N. B.

Secretary-treasurer (pro-tem) R. W. McLellan, Fredericton, N. B.

The following are the members of the Executive:

W. B. Snowball, Chatham, N. B., (J. B. Snowball Company Limited).

F. C. Beattie, St. John, N.B. (Stetson, Cutler & Co.).

Donald Fraser, Plaster Rock, N. B. (Fraser Companies Limited.)

J. W. Brankley, Portland, Maine (representing Miramichi Lumber Company Limited and Dalhousie Lumber Company of Dalhousie, N. B.)

Daniel Richards, Campbellton, N. B. (Richards Manufacturing Co.).

W. Carfield White, Sussex, N. B., (Chas. T. White & Son Ltd.)

J. B. Gregory, Fredericton (York & Sunbury Milling Co., Ltd.)

James Robinson, Millerton, N. B.

George King, Chipman N. B. (King Lumber Company.)

There were thirty nine lumbermen at the organization meeting and a lively interest was taken in the proceedings. The representatives were holders of about 5,500 square miles and there were intimations received from other holders representing 2,360 square miles of timber limits that they would join the association.

Speaking of the new body, President Snowball said "We hope to make this organization helpful to the lumber industry and also as an assistance to the government in the carrying out of their forest conservation and protection schemes as in the prevention of fires."

It is believed that the new association will protect the rights of all, eliminate petty jealousies and give every member of the industry fair and equitable treatment and consideration. For some years there has been talk of a permanent organization of the lumber interests of New Brunswick, but no concrete outcome resulted until the recent movement.

Speaking of the prospects of the organization, a leading member said; "the better conservation of timber lands will surely be brought about through the good offices of our new body. We will prosecute a more vigorous campaign for the prevention of forest fires and in general, take every means for the preservation and protection of the wooded wealth of the province."

Spirit of Co-operation and Efficiency

The objects of the Association as set forth in the Constitution and By-laws are:

To protect the rights, and to promote the interests of the owners of Forest Land, and to conserve and improve the condition of the LUMBER INDUSTRY in the Province by (a) the development of new markets especially for hardwoods, and bringing about a spirit of co-operation in the industry in the Province so as to produce a greater efficiency; (b) investigating and studying problems connected with the lumber industry.

To formulate an efficient system of Fire Protection for all Forest Land in the Province;

To co-operate with the Government in fighting and extinguish-

ing Forest Fires, and protecting the Lands of the Members of the Association;

To prosecute transgressors of the fire laws and regulations;

To promote Legislative and Educational Measures to conserve forest resources in general;

To co-operate with the Provincial Government in the protection and conservation of forests.

To promote and carry on the work of prevention of accidents in the Lumber Industry and in any other industry which may from time to time be assessable by the Workmen's Compensation Board in the same insurance group as the Lumber Industry, and generally to represent employers and employees engaged in such industries in connection with the administration of the Workmen's Compensation Act.

It is declared that the name of the Association shall be "New Brunswick Lumbermen's Association" and that the term.

The term "Lumber Industry," wherever the term hereafter appears, shall mean and include any party, firm or corporation (a) dealing in or cutting lfty cords and upwards of pulpwood; (b) cutting 100 M. superficial feet and upwards of lumber; (c) holding, owing or controlling 500 acres or more of forest land; (d) manufacturing lumber in New Brunswick or wholesale lumber merchant domiciled in the Province; (e) engaged in the transportation of lumber; (f) driving, rafting or towing lumber.

"Forest Land" shall mean lands producing or capable of producing lumber, whether Crown lands or lands of private persons or corporations.

"Province" shall mean the Province of New Brunswick.

How Revenues Will Be Raised.

Each member of the association shall pay an annual fee of \$25 and according to the by-laws it is provided that to further provide

R. W. McLellan, Fredericton,
Acting Sec.-Treas. of New Brunswick Lumbermen's Association

funds for paying the necessary expenses of the Association, and for carrying out its objects the Executive Committee shall have power to levy and collect every year from each of its members the following assessments: (a, a sum which shall be levied upon the Forest land held by him or in trust for him which shall not exceed in the aggregate one-sixth of one per cent. per acre of his holdings at the time the assessment is made, and (b) a sum which shall not exceed in the aggregate one cent for each thousand superficial feet of the logs or lumber or pulpwood which shall be sawn, rossed, or converted into pulpwood by such member during the then present season. Each member shall furnish the Secretary-Treasurer all necessary information in his possession to enable such assessment to be made. Provided that in case any member who does not hold or control Forest land or is not liable to be assessed under this By-Law, the Executive Committee may increase the annual fee payable by such member to such amount as may be just and equitable.

All assessments to be determined and levied by the Executive Committee, and on notice thereof sent by the Secretary-Treasurer to the members of the Association, shall be paid within thirty days of the date of the notice or within such time as may be directed by the Executive Committee.

Make a Profit on Every Lumber Sale

"It would appear that the continually rising costs of lumber threaten to seriously check all future building operations in nearly every community. Yet lumber was never as cheap as it is now, when compared with the prices of other commodities. A bushel of corn or wheat, or any other farm produce will buy more building material now than ever before, says the "Knot Hole" published by the Dower Lumber Co., of Wadena, Minn.

"The yard manager throws up his hands in despair whenever he receives new price sheets and asks how they expect him to make any profitable returns from his yard.

"Here's the answer.

"Watch your stock more closely. See that every line is moving as it should. Clean out the dead stock and replace it with goods for which there is, or can be created a constant demand. Order only such material that you feel can be sold promptly. Don't order a large supply of anything unless you actually need it. You should manage your yard as though YOU were the owner and it was YOUR money that was invested in the merchandise.

"Eternal watchfulness is the price of successful selling in these kaleidoscopic times. That means that accurate records of your yard's business should be kept and studied; that all leaks must be located and eliminated and that you must know what it costs to do business.

"Don't cut prices. It's a poor salesman who will resort to this method of securing an order. A price-cutter is never worth his salt as a salesman, because he slashes prices until there is no profit in making the sale. You must sell building material so that from every dollar that is taken in, you will get a fair profit which is the reward for capital invested and time spent."

Big Saw Mill May Be Set Running

The big sawmill at Queensborough, on the point of Lulu Island, which was built some years ago at a cost of about \$500,000 and has practically never operated, may soon be in commission, according to word received from the West. Announcement is made that the British Timber Corporation has been formed to take over the assets of the British Canadian Lumber Corporation Limited, the transfers of property will be completed in the next few days and the new company will then go ahead and operate on an extensive scale.

The assets of the British Canadian Lumber Corporation were recently sold for \$2,250,000 to a committee of the bond and security holders and include the mill in question, the mill and property of the old Pacific Coast Lumber Co. on Georgia street, a mill and 9000 acres of timber land at Crescent Valley, five Dominion timber berths at Port Moody, logging railroad, camps and equipment at Port Renfrew, a sawmill in course of erection at Masset Inlet and between 200 and 300 provincial licenses.

The new corporation will be managed exclusively in British Columbia, the personnel of the directorate being T. T. Paxton, president and managing director and until recently receiver and manager of the properties; Perry D. Roe and Hugh Davidson. Portion of the limits held by the company comprise some 180 limits around the shores of Masset Inlet, with a water frontage of over a hundred miles, and it is here that the Masset Timber Co. Ltd., under contract with the receiver and manager, are logging spruce on a huge scale.

How District Forester Regards the Future

Acting District Forester Caverhill, of Vancouver, who recently returned from the Maritime provinces where he organized the forestry department of Nova Scotia with a view to reafforesting many of the logged-off areas there, says that after the war is over and the forest department gets its men reassembled again, it is almost certain that the problem of conserving the forest wealth of British Columbia for future generations will demand serious attention.

"In all probability the increase in the demand for B. C. lumber will be sufficient to raise the question of conservation, so that attention will be given to the young forests," stated Mr. Caverhill. "We must regard our annual cut as the harvesting of a crop from our lands, and see to it that the harvested land is helped to become fertile again.

"In the East, there are large areas which must be planted with young trees; in B. C. it is probable we can look to nature to do nearly all our planting. So long as we see that the young forests are protected from fire, nature will probably do the rest, thereby saving us about \$25 an acre for planting and the compound interest on the outlay for a couple of hundred years until the time for harvesting comes round again."

Many of the trees now being cut in the Pacific Coast province, says Mr. Caverhill are the result of from 300 to 900 years' growth. For the production of merchantable timber about 200 years' growth will be required in order to mature the hard fibres and give desired

dimension. Trees big enough to give a grade of pulp timber of a similar quality to that being used in the eastern pulp mills can be grown in thirty years or so. The value of a year's growth of lumber has been calculated as more than equal to the value of a year's growth of field crop on an equal acreage, though the lumber crop can only be harvested after very long growth.

Discussing the effects of forest fires, Mr. Caverhill says that fires which come on logged-off lands soon after the logging has been done are invariably a benefit as they clean up and fertilize the forest floor in readiness for the young trees which come from the burned cones. On the other hand fires which come in the young timber, though they may not cause any loss of merchantable timber cause great potential damage by burning up the young crop which may represent several years' growth.

Flying Boat for B.C. Forest Patrol

Coast forest patrol work will hereafter be carried out, partially at least, from the air. The provincial forestry department of British Columbia contracted with the Hoffar Motor-Boat Co., of Vancouver for the construction of a flying boat which the government will operate on lease for a time, with the option of purchasing it.

The flying boat, which is different from a seaplane, being, in fact, a boat with wings will be completed within the next two weeks, and will be immediately commissioned. A returned Canadian airman, it is understood will operate the boat, which has accommodation for one other passenger, a forest ranger.

The machine will be similar in design to those in use off the British coast for patrol work, with one or two features designed by Hoffar Bros. It will have a wing spread of forty-two feet and a chord of five feet. The boat will be made of mahogany. The aviator and observer will be seated forward of the planes, while the engine will be located overhead between the planes and will have a thrust propeller aft, allowing unrestricted vision in front. The power will be from a 100-horsepower Roberts engine, which will develop a speed of seventy-eight miles per hour and will allow for the machine to climb to a height of 3000 feet in ten minutes.

Should Agree Upon Standard of Diet

Luxurious living and free use, if not waste of foodstuffs in the lumber camps of the province have B. C. been reported by a number of the provincial officers who are trying to enforce the food regulations. It is pointed out that in the camps where the most luxurious food is found most of the men are foreigners and some of them are enemy aliens.

The logging companies, it is said, plead that they have to maintain a hearty standard of living for the men, who otherwise will throw up their work and move to better-fed camps to work if the spirit moves them. It is suggested that the loggers throughout the province agree upon a standard of diet for the camps to eliminate the competition in the camp kitchens which has led to many of the camps putting up a menu that would place many a first-class hotel in the shade.

One Tree Made 40,000 Feet of Spruce

There are 300 men logging at Cumshewa Inlet, Queen Charlotte Islands, for the North Pacific and Kerr & Munn companies, and since April, when operations started, more than 12,000,000 feet of airplane spruce have been felled and bucked. Of this quantity two booms, one with 600,000 feet and the other with 800,000 feet of Nos. 1 and 2 spruce logs have been sent to the mills, while recently there were two more booms waiting for tugs, each of which contained about 1,000,000 feet of lumber.

The government scaler recently scaled one tree which had three logs in it, with a total of 40,000 feet of No. 1 spruce. The smallest log in this tree was 6 feet 8 inches at the top end, while the butt of the largest log measured 11 feet 4 inches.

There are at present seven camps along the Inlet, all under one management. They are well equipped and shortly will be close to a government wireless station. The booming ground will hold 11,000,000 feet of logs.

Reference Work that Is Complete

The 1918 edition of the A. B. C. lumber trade directory of British Columbia has been issued. The directory contains an alphabetical list of lumber and shingle mills, loggers, with shippers, etc., in British Columbia, together with an interesting chapter on customs and tariffs, on lumber and wood products, foreign importers, legislation and laws touching the lumber industry and various other technical and statistical information regarding the woods of British Columbia. The book is by far the most complete which the Progress Publishing Company have yet issued.

How About Export Trade After the War?

Will Demand Upon Canada be Heavy and Persistent from all European Countries?

Views of Leading British Firms on Prospects

What are the prospects of the exports of Canada after the war is over? Will there be a great revival and expansion in the business of the Dominion with Great Britain and the countries of Europe? Will not Canada be expected to furnish an increased percentage of the timber required for rebuilding and reconstruction purposes in the war zone? Will there be an increased development of lumber activities with the United Kingdom when peace is declared and will Canadian timber be put to any new uses in the fostering of Imperial relations?

Vast and Complex Question.

Here are the views of some representative English companies on these vital questions which while reflecting some divergence of opinion will be perused with interest.

Alfred Dobell & Co., Liverpool, declare. "The problems that will have to be faced after the war, so far as the Timber Trade is concerned are at present so huge, and of such a complex nature, we hesitate to give expression to our views, as they necessarily alter with the conditions from day to day. However, we agree with you that after the War the Timber Trade of Canada should be of more importance than it was prior to the War. In the meantime our thoughts are fully occupied with getting on with the War."

Smith & Tyrer, Limited, of Liverpool, assert. "The present situation is a complete control by the Government of all shipments. It has been suggested that this control will continue for a certain period after the War. The continuance of this control for a day longer than is absolutely necessary for War purposes is strenuously opposed by the Commercial interests in this country and it is to be hoped that the Canadian interests will take the same line. Until there is a definite prospect of a resumption of ordinary trading it seems to us useless to speculate on probable market conditions."

Great Opportunity for Canadians.

James Webster & Bro., Limited, Liverpool have the following to say—"We are of the opinion that it will be some time after the War before the Lumber Trade of this country will return to conditions approaching those which prevailed prior to the War. The control at present being exercised by our Government here will, in all probability, be continued through sheer force of circumstances until such time as more important things have been attended to and the situation in connection with them somewhat eased. We believe that the demand for timber will continue to be heavy and persistent in all European countries for a very long time. Stocks are scarce and, consequently, many large wood-consuming trades have almost entirely closed down; but on the other hand, the demand appears to grow from those trades where wood is indispensable. We consider Canada occupies a unique position to take advantage of this country's need for timber post-war and especially will this be so if the submarines should be overcome and shipping space increase instead of decline."

Vital Question Will Be Shipping Tonnage.

Cant & Kemp of Glasgow take an encouraging view of affairs and say—"At present it is very difficult to forecast the probable conditions of the Market for Canadian Lumber when Peace is declared. There can be no doubt whatever that the demand from Europe for Timber will be enormous for many years to come. So far as our own Country is concerned, two Industries alone, viz., Shipbuilding and Housebuilding, will require to go ahead to their utmost capacity. The house famine is at present very acute and the need for more ships is only too apparent. Both these Industries are large consumers of Canadian Woods, chiefly Spruce and Yellow Pine. In addition the Shipyards use a quantity of Oak and Elm in logs. Birch in the log and Plank are required by Cabinetmakers and Chairmakers."

We have no doubt the vital question for a period after the War, as it is now, will be that of Shipping Tonnage. High freights as compared with pre-war values will be the rule and this will operate, especially in the case of Wood owing to its bulky nature, in favor of the shortest voyages in order both to save Freight value and Freight space. How far this may bear on Canadian productions we cannot foresee, but on the whole, looking at the enormous destruction caused by the war, we would say the demand for all classes of timber for a considerable period after the war, will in all likelihood exceed the Shipping space available to carry it. We should have said that the principal demand for Yellow (white) Pine is in Deals 3 in. and

4 in. thick, and in Sidings 1¼ in., 1½ in., 1¾ in. and 2 in. thick with as good a proportion of 1¾ in. and 2 in. as possible. Logs are also used, but the demand for them is subject to the special nature of the work in hand."

Some Pointers for Canadian Manufacturers.

Cox, Long & Co., Ltd., of London, Eng., who have also Canadian branches make several pertinent and important suggestions when dealing with the question of spruce and spruce deals. They observe—"In the rebuilding of Europe after the war it is possible that France and Belgium will take more of Canadian lumber, and certainly this country, for although England has not, nor is likely to suffer in the same material way as the countries so severely devastated, there has been no building going on here for four years, resulting in a great shortage of house property, particularly of the small kind. The Government has already large schemes in hand in this regard for commencement on the declaration of peace."

"As to how far private enterprise will then be granted some of its old and valued liberties now withdrawn remains to be seen, but the impression prevails that the Government will control matters in the Wood trade some little time after the cessation of hostilities. Moreover, the old prejudice against using Spruce for building purposes has yet to be successfully overcome, and until it is the North of Europe will still be looked to as the chief source of supply, particularly when it is borne in mind that Redwood is here considered to be the most suitable softwood for building purposes. Unfortunately your Red Pine is not so favourably received here as its qualities really warrant, nor is it produced to any large extent in the principal sizes wanted for the purposes in question. Your manufacturers should seriously consider the desirability of more freely sawing scantling and batten sizes, as well as deal sizes, and it would be well also if they produced them as nicely and attractively made as those from our Scandinavian friends: in that case, with the spirit running very strong here to give our Colonies the preference wherever possible, we believe that more softwood than ever before should be shipped from your side."

"Your Quebec Spruce Deals, and some of the superior stocks from the Lower Provinces, will still be in great demand for the thousand and one purposes outside of building, the quantity of the former used in this country by large producers of household commodities, is exceedingly large and likely to increase, but, here again, so far as the Lower Provinces are concerned, the manufacturers would do well to saw their goods more consistently and, therefore, make them more attractive to compete with the square-edged and evenly sawn goods from Scandinavia and Russia."

THE DEMAND WILL BE GREAT.

Bryce, White & Co., of London, take a comprehensive and encouraging view of the whole situation. They state their opinion as follows:

"At the present moment, of course, there is nothing doing in the general timber trade, as the British Timber Merchants and Importers here are practically all occupied in matters of national and military importance; but there is no doubt that when peace is declared an enormous development will take place in our building trade, and although for a very long time after peace, the freight difficulty will still be with us, the demand for all classes of Canadian lumber and manufactured joinery will be very great and continuous."

"For the past thirty years we have been considerable importers of lumber and manufactured joinery from Canada as well as from the United States and Sweden. If it can be managed we should like very much to have to rely chiefly on Canada for our supplies in the way of manufactured joinery. At one time we imported large quantities of doors annually from the Dominion and we look forward to the resumption of this business on a very much increased scale."

We believe the United States will require a greater part of its joinery production for its own needs after the war, and as this will render the States largely independent of an export joinery trade to Britain they will not be too anxious to meet our requirements over here in the way of patterns etc., This the Swedes will offer to do, and there seems no reason why the Canadian mills, who will doubtless be able to conform to British requirements, should not resume

this joinery export trade on a greatly increased scale when war is over.

"There will also of course be a great demand for all Canadian Hardwoods and Softwoods, and we sincerely hope at no very distant period to be trading direct with the Dominion on a scale very much larger than before 1914.

"At least for three years past there has been no domestic building trade in this country, and there are, therefore, very serious arrears to be overtaken. When our troops return from the various battlefields and camps, the shortage of accommodation will be sev-

erely felt. In various parts of the country Town-planning Committees have been formed and are getting to work to obviate as far as possible this trouble, and there will be large requirements for Canadian material as a result.

erely felt. In various parts of the country Town-planning Committees have been formed and are getting to work to obviate as far as possible this trouble, and there will be large requirements for Canadian material as a result.

"There has been nothing doing in the furniture trade either for a long time and when manufacture is resumed the call for Hardwoods from the Dominion should be great.

"We think it is important to note that this country seems, at last, determined to give real preference to the British Oversea Dominions in future trading. After the war it will be, as it ought to be, first the Oversea Dominions and the Allies who have fought with us in the great war, second the neutrals, and third the former enemy—if anything in the way of Imperial Trade is left over after the

wholesale lumbermen, who recently joined the
ranks of the Benedicts

Inventor of "Alligator" Passes Away

The man who invented the "alligator" tug which is now so widely used in log driving operations died recently at his home in Simcoe, Ont. His name was John C. West and he was a member of the firm of West, Peachy & Sons, Simcoe, where he had resided since 1865. Until a couple of years ago Mr. West who was in his 73rd year was a big burly man, not showing his years. About that time he was struck by a cable on one of his "alligator" boats and seriously injured. Again a year ago he suffered an injury when he fell from his bicycle. He had gradually failed and for the last two weeks since his return from a short stay at Port Ryerse, had been confined to his bed.

Mr. West was the inventor of the "alligator" tug above referred to, a boat that completely revolutionized the handling of logs. This style of vessel is familiar now, but in its early days so wonderful that the school children were granted an hour or two off to witness its progress to the station and upon the car when one was shipped.

Almost 200 of these tugs have been manufactured by the firm of which deceased was a member and have been sent throughout the western hemisphere, both in South America and in the northern parts of Canada, and they have become indispensable for their peculiar purposes.

Mr. West was identified with the town council, the county council, and was one of the town's water commissioners.

Will Substitutes Be Used for Pulp?

So meagre are the prospects for an adequate cut of pulpwood in Canada this year that paper manufacturers are already discussing the possibilities of making newsprint with the aid of substitutes. Labor scarcity is affecting most of the mills so severely that under no circumstances can there be a cut of logs equal to that of previous years. For that reason, manufacturers are examining the scheme recently adopted by the Donside Paper Co., of Aberdeen, Scotland, for the issues of the London Times whereby 30 per cent. of the waste of sawmills, 35 per cent waste paper and 35 per cent of the standard sulphite and groundwood were employed with success. The sheet produced by this combination is thicker and stiffer and filled with light brown spots. It would, however, save enormous quantities of pulp logs.

More than a billion pounds of wood pulp is imported into the United States yearly of which over two-thirds comes from Canada. About 6,000,000 cords of pulpwood are required annually for United States publications. More than 1,000,000 cords of unmanufactured wood are now shipped to United States mills yearly from Canadian wood show alternate increases and decreases practically very year from 1909 to 1917.

Bright Outlook for Cooperage Industry

Large Quantities of Stock Will Be Required for Munitions and Foodstuffs as Well as Ordinary Lines

By J. Innes, Chatham, Ont.

The manufacture of cooperage stock (staves, hoops and heading) was one of the principal industries in Ontario, especially Western Ontario, some twenty-five or thirty years ago. At that time there was a mill at nearly every station on the M. C. R. from Essex to St. Thomas, and St. Thomas to Courtright, on the Walkerville Road, (now the P.M.R.R.) from Dutton to Leamington, and on the Erie & Huron (now P. M. R. R.) from Blenheim to Port Lambton. On the G. T. R. and C. P. R. the mills were more scattered as these roads ran through an older settled country, but there were large mills at about 20 points on the G. T. R., 5 or 6 on the C. P. R., as well as smaller mills auxiliary to saw and grist mills all over the province.

This is now entirely changed. There is only one large mill left on the M. C. R., two or three left on the P. M. R. R., the plants being principally located on the G. T. R., C. P. R. and C. N. R. The timber is brought in by railroad and water to central points, as there are few large bodies of timber left of the most desirable woods such as elm and basswood.

Elm was used for staves and basswood for heading twenty-five years ago. The elm is now getting scarce and while it is still used entirely for coiled hoops, staves are made from all kinds of hardwood. As basswood which is available is largely sought for lumber, it makes

The front of Donald McEunns cooper shop in Montreal

it too expensive for heading, and heading is now made from hardwoods and spruce almost entirely.

Ninety per cent. of the staves manufactured were exported a quarter of a century ago to the United States and abroad. Now scarcely ten per cent. of the output is exported, while large quantities of the higher grades have to be imported to fill the requirements of the coopers.

While the manufacture of cooperage stock has decreased, the consumption of barrels has, in some cases, increased, so that there are about the same number, or a few more barrels used at the present time than there were formerly.

How Production Costs Have Gone Up.

Prices of cooperage stock have not increased in proportion to the increased cost of raw material, higher wages and the tremendous advance in mill supplies, so that there are few new factories starting even where the timber is available, as there is more money and less work in manufacturing lumber than cooperage stock. Prices in Canada have been governed by those in the U. S. A., and until recently very cheap timber (gum, hockberry and sycamore) was obtainable in the south and cheap colored labor to work it up. These conditions are now somewhat modified; the timber has been acquired by fairly strong corporations who have had to secure it to protect their future supplies, and low-priced labor is a thing of the past.

Provided the Customs Department of Canada works with the manufacturers here and puts the duties on a permanent basis, this industry of manufacturing cooperage stock can be revived, to a great extent, but for the past few years the interests of the cooperage men have been neglected, and changes in duty made without notice at the whim of some of the officials.

The outlook for 1918 is that large quantities of cooperage stock will be required for munitions and food stuffs, as well as for the ordinary lines. The great economy in using a barrel is that after being

used for flour, sugar, apples, etc., it can, if kept clean, be used for fish, fruit, vegetables and other purposes too numerous to recapitulate.

The barrel is one of the oldest packages used since civilization commenced and it is still the easiest package to handle for its size, the most sanitary package available, and is proof against vermin and contamination from contiguous packages.

Next Year's Cut in the East Will Be Reduced

Angus McLean of the Bathurst Lumber Co., Bathurst, N. B., in writing to the "Canada Lumberman", says that the cut in that part of the Dominion will not be over sixty per cent. of normal the number of logs taken out during the past winter was seriously curtailed and if it were not owing to the fact that quite a few of the lumbermen in Eastern Canada carried over some old logs from the previous year, the saw mill output this year would not be 50 per cent. of normal. The result will be that everything in the shape of logs with the lumbermen all through the east will be through the mills early this year, and there will be no surplus whatever to carry over for next year's sawing.

"You understand of course the labor situation at the present time. The shortage of men as well as the high cost of all supplies is a very serious problem to face fall and winter. We predict that next year, the output of the mills will not be over 50 per cent. of normal. Prices on the lumber product are holding strong with prospect of still advancing, and we figure that this year it will not be so much a question of price as it will be of supply.

"While we have a good supply of cars at the present time, the indications are that we will see a very serious shortage as soon as the grain movement begins in the United States and also in Canada. We, therefore, strongly urge all buyers of lumber to order their stocks in now while the cars can be secured, as, in our opinion there will be a very great shortage that will develop in about thirty days from now."

Airplane Spruce Testing Laboratory

Final negotiations are now under way in Vancouver for the establishment of an airplane spruce testing laboratory jointly by the University of British Columbia, the Dominion forestry service and the Provincial Government. The laboratory, when established will contain suitable equipment for testing the strength of spruce airplane timbers under the most modern methods, and when operative will effect great economy in the airplane spruce production of British Columbia.

This was the most important item given in an interview by Mr. R. H. Campbell of Ottawa, director of forestry. The official is in the West upon several matters of departmental importance, but considers the establishment of a spruce-testing laboratory as one of vital local importance. It is expected that local testing systems will show that a greater percentage of spruce can be accepted for airplane work than has heretofore been accomplished, and there will be an elimination of waste.

Busy Development at Port Alice

Port Alice, on Quatsino Sound, West Coast Vancouver Island, is busy with a population of about 600 employed in the mill, and in the logging camps.

The mill is cutting spruce for aeroplane manufacture. The main object for which the plant was equipped, that of pulp manufacture, will be entered upon this fall, probably in September.

With the intention of breaking seriously into the pulp industry in British Columbia, the Whalen interests have equipped the plant with every convenience, and it is expected will cut 200,000 feet a day. The limits contain chiefly spruce, hemlock and fir, and the lower levels are being logged off first. Later it is expected to cut for cargo purposes.

The mill at Quatsino Sound will be the fourth in operation for the manufacture of pulp in British Columbia.

The Havoc Wrought is Indescribable

A Canadian forestry officer, writing from France, says that for two months he has been living on the battle ground of France. There is not a building standing within ten miles, and where villages stood there is nothing left. "We went through a forest," he says, "that is, what once was one. There was not a foot of ground that had not been turned over by shells, not a tree left standing, only a lot of stubs split and shattered. It reminds me a great deal of what it is like after one of our big bush fires, only ten times worse."

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Wanted—Slabs and Edgings

Three to five cars. Apply Box 764, Canada Lumberman, Toronto, Ont. 15-18

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Ties Wante

Cedar, Oak or Maple. Two to five cars. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Sawdust Wanted

Four or five cars of ordinary Sawmill Sawdust. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Cedar Wanted

Good Eastern Cedar, suitable for boat building. Peterborough Canoe Company, Ltd., Peterborough, Ontario. 15-2

Wanted

Two or more cars 1 in. Cull Basswood, also Mill Run Basswood. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Wanted

100,000 ft. 1 in. and 2 in. Cull Lumber, White or Red Pine, Spruce and Hemlock. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Birch Wanted

Wanted to purchase 100,000 feet first class Birch, 1 in. x 8 in. in lengths 6, 8 and 9 feet or multiples thereof. Please give full particulars in first letter. Box 775, Canada Lumberman, Toronto, Ont. 16-19

BIRCH AND BASSWOOD WANTED

We will buy large quantities of 1½ and up, No. 2 Common and Better, log run Birch, with none of the best lumber removed. Also No. 2 C. and B. Basswood. Terms cash. P. O. Box No. 1595, Montreal. 14-17

For Sale-Lumber

Maple For Sale

60 M ft. Maple, 1¼ in. x 3¼ in. x 18 in. up to 72 in. long; practically clear stock, 50 per cent. white maple; a good percentage quarter cut. For further particulars, apply Box 777, Canada Lumberman, Toronto, Ont. 16-16

Lumber For Sale

Two cars 4 x 4 Maple Boxed Hearts. One car 5 x 5 Maple Boxed Hearts. One car 6 x 6 Maple Boxed Hearts.

Seven cars Fir Doors.

Three cars Fir Columns.

Making Newspapers from Sawdust.

Another instance of necessity being the mother of invention is furnished by the Donside Paper Mills of Aberdeen. It will be recalled that lately we published an account of the satisfactory results obtained from an experiment in making paper from sawdust, and stated that the Wednesday issue of the Aberdeen Evening Express had in part been printed from paper which contained a large percentage of sawdust.

With the object of making further inquiries, a representative of the London, Eng., Morning Post called at the London offices of the Donside Paper Mills, and was shown some of the paper. Of a good texture and of a good color, it is safe to say that no one unacquainted with the art of paper-making could distinguish between this new paper and that made from ordinary mechanical wood-pulp, which is, of course, the basis of the paper used in the production of newspapers. The highest grades of paper are still made from linen and cotton rags; but, as the representative of the Donside Mills put it, the art of paper-making lies in making the best possible paper from the cheapest possible material. The idea of making paper from sawdust was, he said, not a new one; but the

great shortage of paper as a consequence of the difficulty of obtaining ships to bring the paper pulp to this country had led the Donside Mills to try the experiment of grinding and refining sawdust, and the result had come very near perfection. The sawdust of course, required very careful handling, and in ordinary conditions it would not have been worth the trouble to utilize it, because mechanical pulp could be made at a much cheaper rate. But since mechanical pulp now costs ten times the amount it could be purchased for in normal times, it was obvious that the new paper could be made in this country at much less expense. The chemist engaged on the experiment had now got exactly what he wanted, and as he progressed with his work the paper would undoubtedly improve. In the making of the new paper sawdust from all softwoods, such as pine, spruce, and aspen, could be utilized, and since the supply of sawdust was practically unlimited, the prospects were bright.

Review of Current Trade Conditions

Ontario

The threatened shortage of labor owing to the annual harvest excursions to the west and the increase in freight rates which went into effect on August 12th are the chief topics of conversation among lumbermen at the present time. Higher prices will naturally result with advancing costs and those wholesalers, who contracted for large cuts at the beginning of the year, are inclined to congratulate themselves on their foresight. There are several factors which will tend to keep prices up and production down. When there is a fair demand for wood of all kinds, particularly hardwoods for war requirements, the output is only from 60 to 75 per cent. of normal, and every economic and marketing advantage is possessed by the producer who can hold out for a good figure. In other words, he is not obliged to sell and by sitting tight can reap the reward of patience and taking a chance. Building operations are improving somewhat in different towns and cities and although several housing propositions have been outlined none has yet got down to a concrete practical basis. Many schemes are put forward, but not one that possesses sufficient merit and comprehensiveness to entitle it to the favorable consideration or endorsement of the various municipalities of the province.

As intimated the labor situation does not improve and while there is an abundance of rough help in certain portions of the province, in others there is a marked scarcity which is accentuated by the roaming disposition of many foreigners who will not settle down and work for any length of time at a steady job in a mill yard or mill although the highest wages are being offered. Another important matter is in regard to getting men for the camps. Towards the end of the present month lumberjacks will be going into the bush for the coming cutting season and while there is some slight improvement in the prospect of getting men, the outlook is as yet not too encouraging.

A recent despatch from Washington says:—Canadian railroads, under an Interstate Commerce Commission ruling are permitted to increase rail and water rates in lumber moving from Canadian ports to New York harbor, to the basis allowed by the railroad administration for rates on American roads.

There is probably less lumber in the mill yards of Ontario than in any year previous and the probabilities are that there will be less next season which gives rise to the prediction that before eight months are over there may be a scarcity in some lines of lumber.

During the present month there is little in the way of selling or buying while the retail yards have been doing a fair business. It is advisable that retailers who have not been buying as freely as they should or sufficiently to satisfy their requirements, should do so, not from the standpoint of benefiting the mills or the wholesaler, but to be assured of delivery in reasonable time and not have to wait weeks and then be disappointed as was the case last year by reason of the shortage in cars. This may appear like trite advice but the conditions in transportation, which became so acute last winter, are likely to repeat themselves this season. Notice has been sent out by the Canadian Railway War Board that two items will have first call in the matter of cars and they are food and fuel. All other goods must take second place. It is urged by the Board that all other Canadian shippers put their energy into two plans for which hearty support it asked. These are, that they should move every possible ounce of raw material for next winter now instead of then and the other is that whatever cars are used should be filled to the utmost; in the old, easy going days the cars were marked to carry ten per cent under actual capacity. The safety margin was too generous and it is now requested that all cars be loaded to the maximum weight or cubic capacity.

Prices continue to stiffen all along the line and indicate that there will be no such a thing as cheaper lumber for building which is the remote hope for some. The demands for lumber are so many and varied that new woods are being brought into new uses every day and new uses are being developed for wood. The requisition from the United States for all kinds of hardwood is good and there is an active call for most all lines of lumber or rather will be as soon as the excessive warm weather of the good old summer days is over.

Great Britain

No material alteration in affairs has come about since the last report and no new features are there to be recorded in the course of business. Dock deliveries are very low and as showing the existing condition of stocks of foreign woods, a well known London firm

estimate that at the present rate of consumption deals are expected to last .84 months battens 1.13 months, pine 18.98 months, spruce 6.13 months, pitchpine deals 0.89 months, rough boards 12.74 months, flooring 5.38 months, and floated timber 10.22 months.

Speaking of the Rationing Scheme the "Timber Trades Journal" of recent date observes that the once ridiculed and despised rationing scheme is now the sole hope of the importing section of the timber trade, and the members are very anxious to see it put into operation at the earliest possible moment. When rationing was first introduced in Great Britain—we believe sugar was the first article on which the experiment was made—the idea was looked upon rather as an amusing novelty; but it has spread rapidly from one article to another, and as a practical way out of many difficulties, it must be admitted that it has justified its existence. It is now the turn of the timber trade, and until a fundamental change occurs in shipping conditions, timber merchants must make up their minds to toe the line. The 1st of July was the last day on which applications were admissible, but by reason of certain ambiguities in the wording of the forms, a supplementary circular was found to be necessary, and some delay has necessarily been occasioned. Perhaps it is scarcely fair to call the form ambiguously worded; it was rather too concisely put and much thought was necessary to discover its exact meaning.

The position of American hardwoods has not changed, and there is hardly likely to be any change while the war lasts. Arrivals of hardwoods for some time past have been confined to a few parcels of gum lumber, hazel pine, a little oak, and some poplar. As regards other descriptions, the market is almost bare of stock, while prices have advanced in accordance with the diminishing supplies. Until some change takes place in regard to future shipments the general position of trade in imported lumber must remain considerably restricted.

In reference to home grown wood there is considerable activity going on in felling and transporting the timber from the country to the towns. Sawmillers are generally busy throughout the United Kingdom. Large quantities of pitprops are lying in the coppices and woods, ready to be trans-shipped, while there is also a fair supply of oak, elm, and ash, chiefly for Government requirements. Trade in native woods is growing considerably in consequence of the better weather conditions and the greater labour facilities now being employed.

Since the war started many disputes have arisen as to whether the seller of goods c.i.f. or the buyer has to pay the war risk insurance. Probably most of these cases have been settled by compromise, but the point has not been legally settled. According to the monthly "Journal" edited by the Norwegian Foreign Office and the Norwegian Commercial Intelligence Bureau in conjunction, it cannot be said that any "custom" exists in Norway making the seller obliged to pay for war risk. The Intelligence Bureau has sent enquiries to to Norwegian Consuls aboard, asking whether any such "custom" can be stated to exist in the countries where they are resident. This was done because it has been stated that judgments have been delivered in some countries holding the seller responsible. Replies have been received from Sweden and Denmark. No judgment has yet been given in Sweden, but the Stockholm Chamber of Commerce have stated that in their opinion the term c.i.f. in pre-war contracts does not include war risk. Some lawyers and also Swedish Marine Insurance Companies are of the contrary opinion. As far as Denmark is concerned the Merchants' Guild at Copenhagen stated in the autumn of 1915 that in their opinion the term c.i.f. did not include war risk under pre-war contracts.

United States

There is not a great deal of change in the general market situation while transportation continues to be very fair. The chief item on the horizon is the labor problem. This is altering with the increasing of the military draft age, and unless the prospects improve it is said that a number of plants are faced with a shut-down. Conditions in the hardwood market remain good owing to war requirements. Hardwoods suitable for the building of airplanes are constantly increasing and a fine requisition for stock exists for plane propellers. There is also a fair call for low grade stock suitable for crating. While the number of concerns making boxes and crates expands continuously, the manufacturer, who keeps his weather eye open, has no difficulty in disposing of his stock and no cloud looms up in the shape of

BUY THE BEST

Retailers and woodworking establishments who like to get **AI NORWAY** and **WHITE PINE LUMBER** always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

lower prices. Skilled mill hands are going into the army in large numbers and this reduces production.

In southern pine it is stated that the mills have all the business that they can attend to and are not eager for more bookings. The present government price list is not likely to hold for more than a month and with a revision in prospect sellers do not look for any drop in quotations. There are tales going the rounds of sales at less than the maximum Government list—and some such sales really are being made, says the "American Lumberman". To understand them one must survey the field with great care and take into consideration a number of factors that at first are not easily discernible. In the first place a number of the "bargains" in southern pine are attributable to transit cars. Transit cars continue to come through to the larger markets and when the demand is not very keen, when the buyer has not appetite for lumber, transit cars suffer, and they suffer awfully now when demurrage and reconsignment charges pile up so rapidly. Therefore some sellers with transit cars that are hard to move recently have moved them by giving concessions. Then there are instances of sales f.o.b. mill made at less than the maximum list, yet the mills are satisfied. For example, many of the manufacturers desire to sell f.o.b. point of delivery because rates are figured on long-leaf weights and on the longest freight rate. But there are some mills that seem to be willing to sell f.o.b. mill and let the buyer have the advantage of rates or any other advantages that may accrue, thus sometimes selling at less than other mills.

White pine is on a solid basis and retail buying is large. In view of a probable diminished supply, there is no anxiety but that all the manufacturers can produce will be taken care of. Prices remain firm. A report is now going the rounds that the Railroad Administration is considering the question of limiting lumber shipments this winter most all the spruce manufactured by the larger concerns is going to the Government and an admirable price is being obtained in the east for all that is offered for sale. On the Pacific

Coast, steps are being taken to dispose of the side cuts. It is probable that customers in the East will be securing more from the Pacific Coast than they have been in the habit of obtaining. Crating and box stock sells well in hemlock. The demand from retail sources continues seasonal.

The fir situation is favorable and better transportation facilities are being provided by the mills. In order that complete, detailed information may be available as to timber supply, manufacturing facilities, stocks on hand, comparison of commercial trade now and in normal times, the chief forester of the United States Forest Service has detailed a man to make a complete survey of lumber production and shipments on the Pacific coast, this to be done at the suggestion of the lumber director at Washington. He will have a number of assistants in the work and the survey is to be completed as soon as possible. Already it has been found that there is considerable congestion of stocks, especially at the smaller mills. While fir mills have been notified that they will be expected to furnish a large quantity of material for cantonment construction in the East and South and cads actually have been sent West in solid trains of empties to bring this lumber back, the orders have not yet been released from Washington. Should these orders be released soon the congestion of stocks should be relieved quickly. Mills in the Pacific Northwest are enjoying a rather active demand locally, as much building is in process or in prospect, especially around Seattle and other points where ship building and other war work is going forward. In this connection the Fir Production Board recently has been advised by the director of lumber of the War Industries Board that the price fixing committee has modified its rulings so as to permit mills making retail sales from their yards to charge a reasonable advance over the maximum mill price for retail service in amounts less than car lots of approximately 20,000 feet. An advance of \$6.00 per 1,000 feet has been allowed by the Price Fixing Committee of the War Industries Board on New England merchantable spruce over the old list price.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Very Little Stock Moving at St. John

It is practically useless to talk price or sales of lumber at St. John or in this vicinity for during the past ten days the American market has been practically stagnant with no enquiries whatever. Of course, it has been usual at this time of the year to anticipate dullness caused by the unusual hot season which as a rule takes on the warmest weather in August or the latter part of July. The mills at St. John are sawing and piling up their lumber in the yards and on the wharves with an optimistic feeling that later on it will be wanted, and they will be able to get a price which will give them a fair profit.

One thing is assured and that is that no logs will be produced this winter as cheap as a year ago. All operators are finding that logs cut during last winter were the highest priced ever, besides as a rule being smaller in size. No United Kingdom or Government business has been transacted and no shipments have taken place by water from St. John all summer. Two or three cargoes have been sent by water to New York but these were contracts made same time ago. Just at the moment random 2 and 3 inch short stock is netting about \$28.00 f.o.b. St. John. Boards are scarce and \$30.00 to \$31.00 is being paid for a narrow spruce board.

Low grade stock culls, etc., is bringing \$25.00 to \$28.00 and is scarce. It is really commanding as good a figure as some merchantable. Local business for factories and yards still remains good, despite the high costs. No large building jobs are being carried on, but the work consists of repairs to buildings.

Shingles have been reduced in stocks, but have been used in local markets. No American shipments to amount to any volume have taken place. Laths are slow and \$2.75 is being taken on cars.

The stave business is good and prices remain firm. All cooperage stocks are very low.

Ottawa Looks For Higher Lumber Prices

Little if anything by way of general change as to prices, stocks, or the volume of business done occurred in the Ottawa lumber market during the first ten days of August. Though the period of the usual midsummer lull was prevalent, manufacturers, wholesalers, and retailers in the main did not express their usual optimistic views of an increased fall demand.

There was a certain measure of trading and a transferring of

stocks but orders and enquiries were much behind what they were a few months ago.

Despite the slackened demand, and the none too cheerful outlook toward fall building operations, the market remained firm as to price. Stocks, even dry, in most grades were on the whole not generally short or low. This phase of the situation when summed up seemed to be that if the buyer was willing to pay the price the required stock could somehow be secured.

Local sales as compared with July did not show much change. A comparison in the volume of business done during a corresponding period last year, lumbermen said, was "hard to make." Conditions both local, domestic and international were different. Accordingly a basis permitting comparison was hard to arrive at.

The decline in American business that existed through July continued into the first part of August. Buyers and yards in the United States placed some orders but the volume of the transactions was in American business attributed by some lumbermen effected, to be due to the arrival of U. S. shipments from the Western States to the Eastern and middle states.

Improved railway transportation in the United States was reported by local lumbermen as being the most probable cause for the falling off in Canadian orders. The price of this lumber delivered, it was stated, was so low as to make it impracticable for the Canadian seller to compete in view of his enhanced logging manufacturing and operating costs since 1915. How long this condition will prevail in the United States as effecting Canadian business is hard to determine. Some views are that when the United States grain crop begins to be moved that fewer cars would be available, and that if lumber of a certain grade is needed in hurry the business will come to Canada. Time alone will prove whether this is the correct solution or not.

The introduction of the new freight rate schedule, which as all the trade knows has gone into effect, did not effect the Ottawa market as to the current sale prices as compared with July. It is problematical how long it will take for the increase in rates to be passed on to the consuming public.

For instance there are, it is believed, some long term contracts at delivery prices. Thus the seller to live up to his under taking has to deliver at the contract price. This means he will have to bear the increase in the freight rates.

How long the life of the "delivery" rates would last seemed a question. It was pointed out that buyers who for years had been

No Sour Milk—No Waste Milk

Take the water from liquid milk and you remove the cause of impurities, bacteria and sour milk. Klim is obtained by removing the water from pasteurized separated milk. Klim is a dry soluble powder that dissolves in cold water.

The milk from which Klim is made is not boiled or cooked so that none of the food value is lost nor the flavor altered.

Klim will keep indefinitely without refrigeration and can be used from the tin as needed. Mix dry with flour, sugar, etc., in baking or cooking, or dissolve in water for use as a liquid. One pound of Klim makes 4 quarts.

Klim bulks small and weighs little, is economical and convenient, prevents waste, always fresh. It is what you need in Camp.

It's Genuine—The Flavor Proves It

in the habit of purchasing at delivered prices would be loath to depart from this system and enter into contracts, f. o. b. mill.

Whether the contract price be at the mill or point of destination, there does not seem to be anything to warrant a slump in lumber prices even though the demand has fallen off. In all probability prices will increase, and if new contracts are made or entered into, the figures will accordingly be higher than a year or eight months ago.

To meet the expected continued decrease in demand it is highly probable that the woods cut and the log output for the season of 1918-19 will fall considerably below that of a corresponding period of a year ago. One of the first evidences of this in the Ottawa Valley was noted when the Davidson sawmill at Fort Colongue, Que., closed on Aug. 6th with a cut of 7,500,000 feet. Last season this mill cut 9,000,000 ft. This decline in the sawmill cut, in view of the fact that James Davidsons Sons have in the past been fairly liberally supplied with shell box orders, in a sense, generally reflects the feeling of the trade as forecasting the probable outlook.

The labor situation with the woodworking plants did not show any improvement though work on shell box orders was not impeded. Reports were current with the trade that a new inquiry for from one to two hundred thousand cordite boxes had been sent out by the British-American Cordite Compny. The tenders it is understood are to be opened on or about August 15th.

Wholesalers reported the volume of business as being quiet. The retail trade did not show much activity beyond orders for repair and reconstruction work.

The outlook for good fall business did not seem to be particularly bright as judged by early August conditions. Lath and shingle remained about the same as ever.

Big Shipment of Spars from the West

Three shipments of spars recently arrived in Parrsboro, N.S., from the Pacific Coast, and others are coming soon. As many of these spars are ninety feet long, each shipment is made on three cars. The freight on one shipment of twelve spars—all long ones—was a little over thirteen hundred dollars. Several shipments of square timber have also been received, and more have been ordered. This timber is of various lengths and some of the shorter pieces are shipped on a single car, while two cars are required for the longer sticks. The freight on one of the two-car loads was nearly twelve hundred dollars, and freight rates have advanced since that was received.

One of the eastern lumber operators continues to make small shipments of hardwood lumber by rail to towns in the United States and Canada. The shipments are made in box cars, and average about four cars per day.

Two tern schooners are loading spruce lumber—chiefly boards and scantling for the United States, and two others that have been in port at Parrsboro for some time, will commence loading for the same destination as soon as repairs are completed. More lumber would be exported if there were more bottoms to carry it.

The first vessel launched from the Parrsboro, N.S., shore this season was the four-masted schooner Freida E., which was turned off from the shipyard of H. Elderskin & Co., Port Greville, a fortnight ago. The new schooner is a remarkably handsome vessel of 669 tons register, and is classed thirteen years in Bureau Veritas. She has all the latest improvements, and her high classification indicates that she is thoroughly built in every respect. Her cabins are finished in Douglas fir, with hardwood floors, which is something of an innovation in vessels built on this side of the continent.

Must Keep Tally On All Timber Cut

A recent issue of the Canada Gazette contains the following of interest to the lumber industry:

His Excellency the Governor General in Council, on the recommendation of the Minister of the Interior, is pleased to order and it is hereby ordered that Section 27 of the regulations governing the granting of yearly licenses and permits to cut timber on Dominion Lands, established by Order in Council of the 1st July, 1898 and subsequent Orders in Council, be rescinded and the following substituted therefor:—

27. Licenses are required to keep a bush count of all saw logs and other timber cut upon a berth, as well as the number of pieces hauled therefrom, in the form of a book to be furnished for the purpose by the Crown Timber Agent. The books covering operations for twelve months ending the 30th April in each year are to be returned to the said Agent duly completed by the foreman in charge of operations, who shall subscribe to the affidavit therein.

All saw logs and other timber cut upon a licensed or permit berth, or upon unpatented homestead lands within the Railway Belt of the Province of British Columbia, whether merchantable or cull, must be clearly marked with a distinguishing number on scaling end with with crayon, chalk or pencil, at the time of scaling.

Numbering will be necessary even when the logs will be sawn immediately or before being placed in the water. The scale of each log and length will be entered opposite its number in consecutive order in a scale book, cull logs being identified of the letter "C".

Where operations are carried on to such an extent as to require the use of more than one scale book, the books are to be numbered serially with letters of the alphabet in the order in which they are used. These books are to be carefully preserved by the licensee for inspection by the Crown Timber Agent or other officer of the Crown.

No person is authorized to scale timber cut upon Dominion Lands other than those authorized in writing by the Minister or his appointed agent.

The requirements in the next preceding subclause will not apply to timber cut on Dominion Lands within the Railway Belt lying south of a line drawn East and West from the Town of Yale.

All timber cut within said tract, which is subject to Crown dues, shall be scaled by a Dominion Timber Scaler holding a scaler's license from the British Columbia Government, and in accordance with the British Columbia log rule.

The following fees, to which shall be added reasonable expenses, shall be paid for the scaler's services by the licensee or permittee conducting operations:—

For scaling saw logs and spars, 5 cents per thousand feet board measure; for measuring piles and poles, 5 cents for each 200 lineal feet; for measuring railway ties, pulpwood, shingles bolts or cordwood, 5 cents for each cord of 128 cubic feet.

When the fees and reasonable expenses are not paid promptly on completion of the work, the amount due shall be made a lien upon the timber with respect to which the work was done, or upon the berth from which the timber was taken.

In the event of a licensee or permittee disputing the Inspector's scale on application to the Crown Timber Agent for the district, a re-scale of the timber will be made by another Dominion Scaler, and in such case the person requiring his services must pay additional expense or cost as may be occasional thereby.

Provided that if the original scale made be proved in accurate to an extent of five per cent. on the total scale, a second charge for the work shall not be made.

The scaling officer shall deliver a copy of any scale made by him to the owner of the timber scaled, upon demand and upon payment of his fees and expenses.

The Crown Timber Agent, or other duly authorized officer of the Department, shall act as arbiter in any dispute that may arise between a licensee or permittee and the official scaler, as to the measurements of any timber and his award shall be binding upon all parties without appeal.

All diameters of logs shall be measured inside of the bark at the top end of the log.

No timber or saw logs shall be manufactured or sawn until the same have been scaled in accordance with the requirements of these regulations, and any person violating this provision shall be liable to have such timber or product of manufacture therefrom seized and forfeited, wholly or in part, to the Crown; or pay dues thereon at the rate of five dollars per thousand feet board measure, according as the Minister may direct.

Shingle Business Keeps Up Activity

The shingle business in B. C., which is usually quiet at this season is quite alive at present. Orders from Eastern Canada and the United States keep up well, and it is said that 75 per cent of the mills still operating. At the beginning of the month an advance of freight rates of from one to three cents per hundred was scheduled. Earlier in the year when the general increase went into force certain points in B. C. were not effected owing to competition of the American roads. Now that the latter have raised their charges, similar action has followed on the Canadian side. Pacific coast shingle men have received word that the 3 per cent war tax imposed in the United States does not apply on freight charges on shipments moving on a through bill of lading from points in Canada to the United States. After passing the International boundary, the tax, however, applies from the point of reconsignment to the destination.

An experiment in ownership is being tried in the shipyard of H. Elderskin & Co., Port Greville. Immediately after the launching of the Freida E. the keel was laid for a tern schooner of about three hundred tons register, and this vessel is to be exclusively owned by the men employed in its construction. It is not unusual for a shipwright to take a share or shares in the vessel he helps to build, but in this case every workman must be an owner. The experiment will be watched with considerable interest in shipping circles.

Shipbuilding News — East and West

The Activity in Operation Continues and War Vessels Are Everywhere Being Rapidly Speeded Up

With the launching of 123 vessels, totalling 631,944 deadweight tons, and the delivery of 41 others of 235,025 deadweight tons, new world ship-buildings records were established in July by American shipyards. The July launchings alone were greater than those of any single year in the past.

Preparations for the laying of a 4th keel in the Pacific Construction Company's yards at Port Coquitlam are being made. The War Sumas was recently launched by the Pacific Construction Company, and the ship has gone to Victoria for installation of engines and boilers. When ready she will load aeroplane timber for Europe.

With a hearty God-speed from the President of the United States and Mrs. Wilson, the cargo carrier Quistconck, the first ship built at the Hog Island plant, was successfully launched lately. The Quistconck is the first of the large cargo-carrying vessels to be launched at the Hog Island yard, and the largest shipyard in America.

The wooden ocean going vessel "War Ottawa" was successfully launched recently in the yards of the Fraser-Brace Shipbuilding Company, Cote St. Paul, Montreal. The ship which was built by the orders of the British Munition Board, is of 3,100 tons dead weight.

The third ship to be launched from the Canadian Vickers' yards at Maisonneuve this season took the water recently in the form of the S. S. "Porsanger," recently delivered by the Canadian Vickers to Furness, Withy and Company, Ltd., of Montreal, who are acting as managers for the British Government, has a length of 380 feet, a breadth of 49 feet, and a depth of 30 feet. Her completion is expected in two or three weeks. The vessel was launched by Captain H. Jonassen, of Bergen, Norway, and—as is usual in war time—there was no ceremony.

Mr. Justice MacLennan, T. E. Robb, Secretary of the Shipping Federation of Canada, and J. M. Walsh, Secretary of the Quebec and Levis Federated Trades and Labor Council, were sworn in recently at the Court House, Montreal, as a Commission appointed by the Government to inquire into the unrest existing between various firms engaged in the shipbuilding industry in Quebec province and their employees occupied in different classes of labor. The inquiry is to have special regard to wages, piecework, working hours, overtime, and other conditions of labor, and the nature and cause of the serious friction which has been represented to the Government to exist. Disputes to be investigated are those arising or arisen between the employees and heads of the following firms: Fraser, Brace & Company of Montreal; Quinlan & Robertson, Limited, Quebec; Davis Shipbuilding & Repair Company, Lauzon, Quebec; the Quebec Shipbuilding Company, Quebec; and in several instances at Three Rivers.

Another fine addition to the Lunenburg Merchants Marine fleet and the first to be built by the R. H. Howes Construction Company at Meteghan River, N.S., was launched recently. The vessel is named after one of the most popular and successful fishing captains of Lunenburg, Richard B. Silver. The dimensions of this fine tern schooner are: 125 ft. keel; 34½ ft. beam; 13 ft. hold; 154 ft. over all; measures 485 tons and registers 400 net. She is classed A 1 at Lloyds for 13 years.

Messrs. McLean and McKay, the well-known Truro N. S. lumbermen, operating on their large timber property at Economy, Colchester Co., have commenced shipbuilding operations. They have a fine three masted 400 ton schooner on the stocks and nearing completion in their ship yard at Central Economy. This vessel is in size, keel 136 feet, depth of hold 12 feet. This enterprising firm have installed up-to-date machinery and other modern methods used in connection with shipbuilding. They include compressed air appliances, also special hand sawing and edging machinery.

Good progress is being made on the new vessels being built at Harvey Bank at the headquarters of the Bay of Fundy, and the residents along the Shepody, will before many weeks pass, have the opportunity of witnessing once more a launching, a common sight in the old days before the steel vessels crowded the wooden ships from the ocean trade. At Alma, shipbuilding is giving the village a great boom. Two vessels are on the stocks and one, it is expected, will be launched this month. The plant at Alma is complete and modern. There is a possibility of a vessel being built at Hamilton Creek, where vessels were constructed years ago. Timber is reasonably near all these places and the facilities good for getting it out. Time was when a fleet of fifteen or twenty three-masters could be seen at Hope-well Cape, either bound up the river for plaster cargoes or bound out loaded. Those were the days when the pilots had something to do. Now the vocation of these guides of the bay and river is practically gone.

Presenting a striking and beautiful picture, in a gala dress of bunting, the tern schooner William Duff left the docks of Ernst's Shipbuild-

ing Co., Mahone Bay, for her home port of Lunenburg, after having been fitted out in every respect ready for sea. The vessel has been under construction for the past six months. Her dimensions are as follows: Length of keel, 127 feet; breadth, 33 feet; depth, 12 feet 7 inches; length over all, 160 feet; net tonnage, 365.

Launching of two fine wooden vessels took place lately at St. John, N.B. The new vessels are the Celina K. Goldman, 477 tons, built at St. Martins, and the Vincent, A. White, 460 tons, launched at Alma.

Canada now holds the record for speed in wooden shipbuilding on the American continent. The feat was accomplished by the Quinlan & Robertson Shipbuilding Company of Quebec in the construction of the War Seneca, a wooden steamer. This vessel was launched on June 13, and a dock steam trial was made—just 48 days later—by turning over the main engine and auxiliaries under steam. This is six days better than the previous best record made in the United States, which is said to have been 54 days. The boat was built for the imperial munitions board.

Increased costs of wooden shipbuilding, and the decreasing toll of submarines are the joint causes of the cessation of the demand for the product of the wooden shipyards of British Columbia. A serious problem is being faced at the coast, since no more orders seem likely to be forthcoming, says a recent despatch from Vancouver. Many thousands of dollars have been invested in building the yards and their abandonment at this stage would cause a very heavy loss. If the plants are allowed to lie idle, or are dismantled, the cost of building the ships actually turned out, would reach an excessively high figure. In connection with the high cost of the first vessels built, one shipbuilding man of Vancouver stated that the production cost was naturally much higher than it would be for subsequent orders. The question of the future of the wooden shipbuilding industry is raised in an article in a Vancouver paper, which suggests that the Government cannot allow these yards to remain idle. In building of another fleet of vessels, the establishment of the yards would be justified. A statement of Mr. R. P. Butchart, director of wooden shipbuilding for British Columbia, contains the following: "So far as the Imperial Munitions Board is concerned, for the past six or seven months everything possible has been done with a view to securing orders to keep the shipyards going." I wish to make this statement to correct the wrong impression that has been in circulation indicating that the board is in some measure responsible for the present languishing state of the industry. "Up to date," said Mr. Butchart, "we have been unsuccessful, and the contractors also, with the exception of the Lyall Shipbuilding Company, who are building on their own account, in securing any new contracts for wooden tonnage."

Logging Camp on Wheels

The office and commissary of a western lumber company who are making extensive use in their woods operations of moveable cars for housing their employees.

Increase Shown in Lumber Shipments

Lumber shipments from British Columbia to offshore points have shown a big increase this year and for the six months ending June 30 the quantity of lumber exported on ships amounts to 24,806,297 feet. The half year is therefore better than for the whole of 1917, when the amount of lumber shipped from Vancouver overseas was 18,083,622 feet. The building of the Robert Dollar Line sawmill on Burrard Inlet has been responsible for part of the increased activity for this mill has shipped 7,700,000 feet of lumber to China since the first of the year. Australia comes next with 5,535,934 feet; then California, with 3,150,000 feet; South Africa with 2,325,523 feet; South America, 1,261,400 feet, and Japan, 500,000 feet.

The Goderich Mfg. Company, Goderich, Ont., are contemplating the erection of a planing mill to cost \$30,000. A by-law will soon be submitted to the ratepayers.

The Port Arthur Pulp & Paper Company, Bare Point, Ont., have awarded the contract for the erection of a slasher mill to cost \$6,000 to J. F. Hewitson, 606 Whalen Bldg., Port Arthur, Ont.

Campbell, Welsh and Paynes, wholesale lumber dealers, Toronto, have removed their offices to Rooms 1504-5 in the Bank of Hamilton Building, where they have much larger and more convenient quarters on the same floor.

The Northern Wood Products Ltd., have been incorporated with head office at Haileybury, Ont., and capital stock of \$40,000 to carry on business as timber merchants, sawmill proprietors, wholesale and retail lumber yard proprietors and timber growers; to export, import and deal in timber, ties and wood of all kinds, etc. The provisional directors are F. A. Day and W. A. Gordon.

The Bathurst Lumber Co. of Bathurst, N.B., have bought the property and assets of the Hought Paper Mills of Camden East, Ont., which have been in liquidation for some months. The sale was effected by G. T. Clarkson, liquidator, Toronto, and the figure paid was \$67,500. The Bathurst Lumber Co. were creditors to the extent of some \$20,000. The Hought mills manufacture wrapping and toilet papers, and have been idle for some time.

W. A. Kyro has been engaged driving 2,600 cords of pulpwood from 20 miles up the Current River to the mill of the Port Arthur Pulp & Paper Company. After this drive is concluded he has another one of 1,260 cords of pulpwood on the McIntyre river. All the wood was purchased from farmers by Mr. Kyro, who is a pulpwood contractor and the price paid was about \$7 a cord, delivered on the river bank. Mr. Kyro says he is prepared to contract with Fort William or Port Arthur for any amount of wood, either tamarac or jackpine. There is an abundance of spruce up the Current and McIntyre rivers.

The Collins Inlet Lumber Co. of Toronto, whose mill at Collin's Inlet, Ont., was burned a few weeks ago, have made arrangements to complete the cutting of all the logs taken out by them last winter. The Little Current Lumber Co. of Little Current, Ont., will do the sawing. The Collins Inlet Co. have sold their limits, which embrace principally white and red pine, and are 125 square miles in extent, to Manley Chew, ex-M.P., of Midland, Ont., who will operate camps on the property during the coming winter. Melville Bertam, president of the Collins' Inlet Lumber Co., will, it is understood, devote his attention in future to the Lincoln Electric Co. of Canada, of which he is president.

Arthur K. Johnson of the firm of J. P. Johnson & Son, wholesale lumber dealers, Toronto, who is widely known to the retail trade, not only in Toronto, but throughout the province, as a successful and enterprising salesman, is the latest member to join the ranks of the benedicts. At St. Paul's Methodist Church, Avenue Road, Toronto, on August 8, Mr. Johnson was united in the bonds of matrimony to Miss Laura Constance Boyd, daughter of Mr. and Mrs. Edward Boyd, Toronto. The ceremony was a very quiet one. After spending a few days in the Muskoka district Mr. Johnston and bride will reside in Toronto, and will be followed by the heartiest well-wishes of a host of friends.

Eastern Canada

Seeley & Stevens, Dunham, P.Q., sash and door factory, have dissolved.

Letourneau & Lambert Limitee, lumbermen, La Sarre, P.Q., have secured a provincial charter.

A party of 125 experienced lumbermen left St. John, N. B., recently, for British Columbia to get spruce for the aeroplanes of the Imperial Munitions Board.

The Drummondville Match Company, Drummondville, P.Q., who are rebuilding their match factory at a cost of \$100,000, are in the market for machinery for packing matches and punches.

The St. Maurice forest protective service has engaged two aviators who, with hydro-planes, will patrol the wilds of Northern Quebec and other forest territories for the discovery and prevention of forest fires.

The St. John Shipbuilding & Dry Dock Company, St. John, N.B., have commenced work on a dry dock. The managing director is D. S. Pratt; chief engineer, A. R. Dufresne, and secretary-treasurer, Col. Thomas A. Duff.

The Kipawa Fibre Co., Montreal, are making good progress on the construction of their new 100 ton sulphite pulp plant at Kipawa. Over 400 men are employed and the pouring of concrete for the new building has begun. About 5,000 horse power of the 20,000 available will be harnessed.

The planing mill of Rhodes, Curry & Company, corner West Yonge and Windsor Streets, Halifax, N.S., was completely destroyed by fire recently. Considerable damage was also done to piles of lumber and shingles surrounding the mill. The explosion of a gasoline tank made the flames more violent.

At a special meeting of the North American Pulp and Paper Companies Lewis Chabel of the International Paper Company, and the direct representative of International Paper, President Phillip T. Dodge, was elected to the board of trustees of the North American Pulp and Paper Companies, who have several pulp and paper mills in the province of Quebec, and also appointed

to the active board of management. This is an important step inasmuch as it assures to the North American Pulp strong practical management, and also places at its disposal to a large extent managing ability available formerly only to the International Paper Company. This means, further, that although the general manager has not yet been named, good practical management is assured. The board of trustees have also decided to consolidate all outstanding bonds and other loans, and intend to put the securities of the company on a more solid basis.

Is a lumber or other company damming a river liable to damages through floods alleged to be caused by said damming. This is the important point of ten actions presently pending in court at Murray Bay against the Baie St. Paul Lumber Company at Quebec. People who suffered through floods recently have filed actions to the aggregate amount of some ten thousand dollars.

The Woodlands Section of the Pulp and Paper Association has decided to have a fall meeting on September 20th, at the Windsor Hotel, Montreal. The tentative programme includes three papers of interest to lumbermen—one on "Scalers," another on "Driving Streams," and a third on "Company Camps." A luncheon will follow, and the afternoon will be taken up with discussions.

The Giard & Caswell Lumber Company has been incorporated with head office at La Prairie, P.Q., and capital stock of \$10,000, to carry on business as sawmill proprietors, and to own or lease, sell or otherwise deal in and with timber lands, and timber limits, standing timber, water powers, etc. Among those interested are J. E. Halle, S. Gobeil of La Patrie, and C. L. Caswell of Sweetsburg.

Since 1867, the date of Confederation, the Government of the Province of Quebec has derived a total revenue from its forests of more than \$42,000,000. During the year ended June 30, 1917, the revenue from this source was \$1,516,157, of which \$347,505 was from ground rent and \$1,115,892 from stumpage dues. The greatest total forest revenue was during 1914-1915, when the amount collected was \$1,736,605. These revenues form an important item in the support of the civil government.

Western Canada

The Nasmyth Lumber Company has purchased the two machine shingle mill known as the Cypress, at West Vancouver.

Plans are in progress for the erection of a box factory by the Lumber Products Ltd., Brunnette St., New Westminster, B.C.

The Morse-Green Lumber Company, South Vancouver, B.C., are starting work on alterations and extensions to their lumber mill.

M. McKenzie, Hope, B. C., will rebuild his sawmill and camp buildings on Kettle Valley Railway, near Hope, at a cost of \$7,500.

The Gibson Mining Co., Ltd., who are erecting a sawmill on the company's property at Kalso, B.C., are in the market for lumber cutting machinery.

The Standard Shipbuilding Company, Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$25,000, to carry on business as shipbuilders, lumber and timber merchants sawmill proprietors, loggers, etc.

The Thurston-Flavelle Lumber Company, Port Moody, B.C., have commenced work on the construction of five dry kilns and sheds to cost \$17,000. The general contractors are the Taylor Engineering Company, Ltd., 850 Hastings Street West, Vancouver, B.C.

The British Timber Corporation Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$1,500,000, to carry on business as timber merchants, sawmill and shingle mill proprietors, lumber operators, and to export and import timber and wood of all kinds.

The Nasmyth Lumber Company, 207 Hastings Street West, Vancouver, B.C., have plans in progress for the erection of a sawmill at West Vancouver, and will erect a flume at Dundarave at a cost of \$7,000. The company also have under contemplation the erection of a box factory at West Vancouver later in the year.

Women have stepped in to do their bit in aeroplane spruce production. The dining service in the three camps of the Northern Pacific Logging Co., operating on Cumsheewa Inlet, Queen Charlotte Islands, are served by women waitresses. This innovation has been in force for some time and is now well past the experimental stage. It has met the full satisfaction of the men and the management.

At a sale by public auction in the Crown Timber Agent's office, New Westminster, conducted by Assistant Crown Timber Agent Walmsley, timber berth No. 574 was sold for \$13,500 to the Maple Ridge Lumber Company. The upset price was \$935. There are some 170 acres in this berth which is located on the west shore of Pitt Lake, adjoining timber berth 419 also owned by the Maple Ridge Lumber Company.

Sealed tenders are being received by the Minister of Lands for B. C., until the 23rd day of August, 1918, for the purchase of License X1391, to cut 1,650,000 feet of spruce, cedar, balsam and hemlock on an area adjoining Lot 730, Mathieson Channel, Range 3, Coast District. Two years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

The Miami Lumber Company, an extra-Provincial company, with head office at 200 Lindquist Bldg., Grand Rapids, Mich., U.S.A., has been registered under the Companies Act, and is authorized to carry on business in the province of British Columbia with provincial head office at 1218 Langley Street, Victoria, B.C. Guy S. Brown, lumberman, Victoria, B.C., is attorney for the company. The capital stock is \$300,000.

The Vanstone Logging Company Ltd., has been incorporated with head office at New Westminster, B.C., and capital stock of \$20,000, to carry on business of box makers, woodworkers, timber merchants, lumbermen, loggers, sawmill, shingle mill, pulp mill and paper mill proprietors and manufacturers of all kinds of boxes, receptacles, lumber and wood; to export, import and deal in saw logs, timber, shingles, bolts, piles, etc.

Dempsey-Ewart Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$75,000, to acquire and take over the logging plant purchased by James M. Dempsey as trustee from John K. O'Brien Ltd., and to pay for the same either in money or fully paid up shares of the company. The company will carry on business as lumber and timber merchants sawmill, shingle mill and pulp mill owners, loggers, etc.

Matchers That Do Big Things in a Plant Where Big Things Must Be Done

Four Yates No. 91 Planers and Matchers
are installed in the plant of
SNOQUALMIE FALLS LUMBER CO.
Snoqualmie Falls, Wash.

The No. 91 Planer and Matcher

is truly a machine that does big things. When the Snoqualmie people recently built their fine, new planing mill they were quick to realize this fact, as hundreds of others have done. Big plants—plants with a reputation for output and quality to live up to—have installed Ninety-Ones. Not just ONE for an experiment, BUT WHOLE BATTERIES OF THEM. They realize that the only machine that can return to them a profit proportionate to a big output is the Yates Ninety-One.

The ability to turn out enormous quantity and maintain high-class quality of output—year in and year out—gives the Ninety-One the distinction of being the most powerful and efficient matcher ever built.

Send today for our Matcher Book. It is free and will
confirm to you our pride in this machine

"Suggestions for the Lumberman"

The above is the title of a booklet which we are trying to put into the hands of every Lumberman and Mill Owner in Canada. The suggestions contained therein are live, practical and of proven worth. There is something of value in this booklet for every Lumberman, no matter what the size of his camp, large or small.

The Mill Man also will find his time well spent by a perusal of this Booklet, as there are suggestions therein by means of which he can reduce his operating expenses and increase his profits.

WE WANT YOU TO HAVE A COPY

If you have not received yours yet, drop us a card. We will gladly place this Booklet also in the hands of each one of your foremen if you wish. Just say how many copies you want, if you prefer to distribute them yourself, or send us their names, and we will mail them direct.

Marsh Engineering Works, Limited Established 1846 **Belleville, Ontario**

A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

Send for further particulars and prices.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention!

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, break-downs or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims. Address

DUNLOP "Gibraltar RedSpecial"

POWER—SPEED—SERVICE

NOTHING short of remarkable was the advent of this master Dunlop Belt "Gibraltar RedSpecial." Its coming undoubtedly solved that momentous problem which had for years baffled belt users, namely, the economical transmission of power, combined with an unusual length of service.

Dunlop Workmanship An Important Factor

"Gibraltar RedSpecial" superiority lies not alone in the supreme quality of the materials embodied in it. Dunlop Workmanship, the character of which is unsurpassed, has also contributed its quota. This accounts for its great tenacity, its enduring flexibility and its absolute uniformity throughout.

Held In High Favour

Resistance to destructive elements, and the unusual capacity to continually deliver the maximum of power with the minimum of up-keep expense, are characteristics of "Gibraltar RedSpecial" which have placed this belt on the pinnacle of popular favour.

Where This Belt Excels

"Gibraltar RedSpecial" is particularly adapted to Saw, Lumber, Pulp or Paper Mills, Bleacheries, Mines, Cement Plants, Brick Yards, Oil Wells, Threshers and Stone Crushers. It is built especially to withstand the jerky strains consequent on the fluctuation of power under any load; is immune to the deteriorating effects of an over-abundance of moisture, or, as in the case of Pulp and Paper Mills and Bleacheries, injurious vapour fumes. Maximum adhesion over small pulleys on high-speed machines is another reason why this belt predominates.

The Dunlop Guarantee

If you have a difficult drive anywhere in your factory drop a line to our Head Office, or to our nearest branch, and we will send a man experienced in belt engineering to consider your requirements. If it is an instance where the "Gibraltar" Belting may be suitably employed we will recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm producing rubber products.

"The Original Red Rubber Belt."

*The Babbitt Metal that's at the Front in Efficiency
and Economy*

HARRIS HEAVY PRESSURE

THE ARISTOCRAT OF BABBITT METALS**SHIVES LUMBER CO., LTD., Campbellton, N.B.,
Canada**Messrs. The Canada Metal Co., Ltd.,
Toronto.

Dear Sirs:

Replying to your inquiry regarding our experience with Harris Heavy Pressure Metal, would say we have been using this metal for about five years in main bearings and cranks of Wickes' gangs and steam engines, also edgers, etc., in place of more expensive metals that we formerly used for these bearings.

We are pleased to be able to say that the Harris Heavy Pressure has in every case given us good satisfaction, being a nice metal to pour without shrinking or cracking, and wearing well.

So long as this metal retains its present standard of excellence we will have no hesitation in using it for the most severe conditions we have for babbitt metal.

Yours
JOHN M. MACLEAN,
Superintendent.**WRITE FOR COMPLETE LIST OF BABBITT METALS****THE CANADA METAL COMPANY, Limited****Head Office and Factory TORONTO Fraser Avenue****Branch Factories—****HAMILTON****MONTREAL****WINNIPEG****VANCOUVER**

Speed and Reliability

Our No. 3 Lath Machine

has a remarkable capacity for output and stands up to the strain of continuous running at full pressure as few other lath machines can do. By its superior strength and great speed it is particularly valuable to mills doing a big volume of work. This fact is established by constant repeat orders from the larger mills. Floor space required, 4 feet by 4 feet 6 ins.; weight 1,600 pounds. Maximum power required, 15 h.p. **Shipped to you immediately from stock.**

Send for catalogue and list of machinery available for shipment.
We make all kinds of equipment for the lumber industry.

The E. Long Manufacturing Co., Limited
ORILLIA, ONTARIO

Waterous

Kendall Nigger

The "WATEROUS KENDALL NIGGER" overcomes the greatest drawback experienced in the ordinary steam nigger—the chance of accident unless operated by an expert.

Where the carriage is of medium weight, unless in the hands of an experienced man, the danger of wrecking the carriage is especially great.

The "WATEROUS KENDALL NIGGER" is practically accident-proof. While it possesses both the speed and power of the ordinary Steam Nigger, it is so designed that a green operator can do quick and effective work without endangering the carriage in any way.

By attaching the Nigger Bar to one cylinder only, one motion of the operating lever turns the log and a quite distinct and separate motion is required to load it.

The stroke of the cylinder controlling the loading motion is made very short and thus further precludes the possibility of a serious mishap.

The Kendall Nigger is constructed to be powerful and rapid in action. The cylinders are 10 in. and 8 in. in diameter, pistons are steam cushioned at both ends of stroke, valves are adjustable to permit increase or decrease of operating speed without affecting the power of the machine.

Nigger Bar is of wrought iron, dogs are extra wide, top dog is winged, a steel roller is supplied. No floor plate is necessary. All lever and crank connections are made short and direct, so that the machine gives instant response to the movements of the sawyer's lever.

A great many of the Niggers are already in use in mills, where speed and accuracy on the log deck are essential, but where a medium weight carriage is operated. If your conditions are similar the WATEROUS KENDALL NIGGER will give unequalled satisfaction.

Ask for details and descriptive catalog No. 123

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 90c per lb.; West of Fort William, \$1.00, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00
worth of mixed metal
sold annually.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Don't Blame the

FIRE BRICK

if it fails to give satisfaction. More likely than not you have been using the wrong kind for your particular purpose. A firebrick intended for use in a small hand-fired boiler may not give the same result if used under high pressure boiler with mechanical stoker.

So when sending us your enquiries be sure to specify for what purpose these brick are to be used.

You are sure then of a high quality brick, that is absolutely the best for your purpose.

We Manufacture the Following Well Known Brands

"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"

Catalogue is yours for the asking.

Conserve Your Man Power

DURING my visit to Bonami I was greatly delighted to find the completion of our Y. M. C. A. building, its splendid appointments, and the way it was managed by the Association, and to see the effect it was having upon the minds and lives of our men. I have no doubt but what its continued use will prove of increased helpfulness, and to such an extent as to cause us to erect a number of such buildings at our different mill camps.

PEMBROKE, ONT.

STEEL ROLLER LINK-BELT

For Unusual Strength

Side bars made of selected carbon steel. Bushings of smooth case-hardened steel, and securely held from rotation. Ends of case-hardened steel pin are milled flat, fitted snugly in corresponding hole in side bar and thus held securely from the tendency shown in other types of pins to rock loose, elongate the hole, destroy the pitch and ruin the chain before other parts are worn out.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of
Chapman Double Ball Bearings

— IN —

**Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.**

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

**You pay for Chapman bearings
whether you buy them or not**

Make This Test in Your Shop

Set two men at an identical job.

Give one man a brand new file. Give the other man a half-worn file.

See how much time it takes for each man to finish his job.

The result will prove that it will pay you to instruct your mechanics to turn in files when they have passed their "efficient" point.

The "Famous Five" files stay hard and sharp because they are accurately cut and properly hardened. Specify them when ordering.

They are:

Oldest and Best

HOE

Chisel Tooth Saws

Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

Special Flanged Shanks and Superior Bits Supplied

R. HOE & CO. 504-520
Grand Street New York City

America's Oldest Saw Manufacturers

An economy too large to postpone

OBERVE the big part of every cord of wood wasted where wood is barked the old way. All your wood goes into pulp when you use the barking drum pictured above.

Write today for the figures

If your mill barks wood the old-fashioned way, let our engineer tell you the actual saving our method will accomplish in your mill. It will in no way obligate you to get the facts.

TWO of these men and our barking drum will release all the rest for other work. The annual saving reaches an astonishing figure. Labor is scarce. Investigate this short-cut.

American Barking Drum Company, 440 South Dearborn St. **Chicago**

When you want new saws—
economical saws—saws that are
made of edge-holding steel—saws that
stand up to the work, whether it be Band,
Inserted Tooth, Solid, Small Saws for the Planing
Mill, or Mitre Saws for the very finest work, look to
a Simonds Factory to supply you. Catalog sent on
request. Inquiries invited.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 38 Toronto, September 1, 1918 No. 17

Placing Lumber Orders Now Will Help Solve Distribution

The methods of doing business are changing. Radical reforms in procedure have been brought about by the war. Merchandizing modes like the fashions now follow certain seasons and he who steers his course by the chart and compass of the new order of things is the one who is going to reach port first and attain the largest measure of success.

By experience, insight and observation we learn and he who does not profit by these mediums is falling behind in the race. Even the methods of buying and handling lumber are altering to a certain extent. The wise dealer now does not wait until he actually requires certain lines, or has a big bill to fill, but protects himself as far as possible by ordering beforehand. A leading authority on the industry remarked the other day that the dry goods man, the shoe retailer, the men's furnisher and the grocer all bought their stocks ahead. They purchased in the spring largely what was required for fall and in the fall they placed their bookings for what they would need in the spring. The amount of business closed months ahead was from sixty to seventy-five per cent. Of course all requirements were not satisfied, a certain leeway being left for emergencies, new goods—not then being offered—and a reasonable allowance made for contingencies.

The question is asked why cannot the retail lumberman whose stock is more staple and less subject to variations than perhaps any other line of merchandise, learn to follow the custom of his brother businessman. The experience which many a dealer had this spring is recalled with a certain amount of regret and even disgust, when carloads upon carloads of material, which had been held up by the railway congestion for months, were dumped in his yard. He felt he was being swamped and did not care if he never gave another order. He would not go through the same turmoil again yet it would appear as if a number of lumber merchants, who have been holding

aloof from purchasing will have a repetition of the unhappy state of affairs of last spring.

The car situation is now good, but it is not likely to differ this winter from that which prevailed during the last cold season. The various war boards have been urging shippers to get out all material possible now and to get in as heavy supplies as they can, for the transportation companies will have all their equipment taxed to the utmost in carrying munitions, food and men for overseas as well in the shipment of grain. Other business will have to take second place.

Now is the time for the retail lumbermen to survey his stock and take cognizance of his needs. He may buy with safety at present quotations, which, from all indications are likely to ascend. The shortage in the cut, the scarcity of men for camp operations, the higher rate of wages, the augmented cost of distribution and the many new uses to which wood of all kinds is being put, portend that prices will soar—to what extent cannot be foretold. While conditions in certain lines cannot with accuracy be gauged at the present moment, there will in all likelihood be a very active demand for every kind of housebuilding material, for the housing plans are making progress under the schemes being worked out by the various governments and the different municipalities.

After all the volume done by the retailer on stock lines has not varied greatly during the past two years. Good business foresight and judgment will be exercised by those who order at this juncture what they require; for the next few months they are assured of reasonably prompt delivery and protection in prices. This advice is not tendered from a wholesaler's or manufacturer's standpoint or from motives prompted by any outside or selfish influence, but from a careful study of the general situation.

The various associations of the trade as a whole are pointing out the advisability of such a step being taken so that there may be a more equitable distribution of the products of the forest and no violent interruption to business. By the lessons of the past much can be learned and there is no reason to expect any appreciable improvement in the car situation this coming winter and spring from what existed a year ago. Matters may be much worse. This is the time for action and the retail lumber merchant who will take the trouble to size up the problem from every angle, will see the wisdom of buying now so that his immediate or future needs are attended to without further delay.

Fire Prevention Leagues Can Do Most Effective Work

Canada has the largest forest area of any country in the British Empire. When the average Canadian peruses a paragraph like this he is elated over the splendid natural resources of his country. But when one also reads that Canada has the largest per capita fire loss of any land in the world the feeling of pride in the self same resident is not quite so pronounced.

The fire loss in the Dominion is 47 cents greater per capita than it is in the United States, \$2.09 cents greater than it is in England and \$1.99 greater than it is in France, all these countries being vastly more populous than our own. Mr. E. D. Hardy, of Ottawa, who has given special study to the subject of fire protection and insurance, in a thoughtful and timely article in the last issue of the "Canada Lumberman", on "Economic Significance of Our Fire Waste," stated that the cause of the unfavorable showing the land of the Maple Leaf made in comparison with others was no doubt attributable to carelessness, due to a lack of proper sense of individual responsibility which is an important national factor. He issued a vigorous call for active co-operation on the part of every good citizen, and more particularly those connected with the lumber industry to whom he was speaking to adopt defensive measures against the common enemy.

One of the most startling statements made by Mr. Hardy was that "no fewer than 20,700 buildings of frame construction were destroyed by fire in Canada during the last four years, with a total loss of over \$14,000,000.00. Approximately \$8,000,000.00 of lumber

value was burned in buildings of other than frame construction. Lumber yard fires contributed another \$6,500,000.00, and the destruction of wood products in process of manufacture, \$3,725,000.00. These figures merely representing readily ascertainable values are doubtless incomplete. They demonstrate, however, that fire is largely responsible for the depletion of our lumber supply, even apart from forest conflagrations. If it be the duty of the State to promote the public welfare by the prevention of forest waste, the broader application of the principles of conservation should extend to the protection of created values. In the last analysis, the loss by fire of a city dwelling is even more important to the people of Canada than the loss by fire of timber in the public domain. Both the building and the timber are assets of the nation. If they are destroyed, these assets are wiped out. No system of taxation will serve to restore them whether the tax be collected by constituted authorities under the law, or by private interests as premiums on Policies of Insurance. Reforestation costs money, which must be levied through taxation in some form. Replacing buildings destroyed by fire costs money, a large proportion of which, by means of insurance, is assessed against property which has not been burned. In both cases, the cost is borne by the people of Canada, as a whole, and is, therefore, a matter of public concern."

Sir William Hearst, Premier of Ontario has taken the matter up and active steps are under way for the formation of a Provincial Fire Prevention League which will be affiliated with the Provincial Fire Marshall's Department. Representatives of many organizations including the press of the province have been invited to lend their influence and assistance in the worthy object. Much can be done by way of education, agitation and mutual association to eliminate the fire evil which plays such havoc with the expansion, wealth and resources of the Dominion.

It is said that the cost of fire insurance in Canada is five times greater than what is it in Europe and every citizen whether suffering directly from igneous wastage or escaping entirely the visitation of the fire fiend to his home, factory or office, shares proportionately in the payment of the enormous sums that are annually handed over in the shape of premiums or in the adjustment of losses. How? asks someone. In the increased cost of insurance, the taxation levied for the maintenance of municipal fire departments, the undermining of our commercial assets, the impairment of our credit as individuals or a people and in many other ways.

The whole question must be dealt with in an effective, aggressive and comprehensive manner and, by personal and concerted action, plans inaugurated for preventing the origin and spread of fires. The wastage must be checked and the formation of the proposed Provincial Fire Prevention League is deserving of every encouragement and support.

Revealing the Development of Great Canadian Industry

Canada is the second largest pulp and paper producing country in the world. The annual output of the pulp and paper plants in the Dominion is over \$85,000,000, while pulp and paper exports lead all manufacturing concerns with the sole exception of explosives. The industry is so closely co-related with lumber activities by reason of many timber companies carrying on pulp and paper operations and vice versa, that particular interest has been aroused in the splendid and educative exhibit made by the Canadian Pulp and Paper Association at the Canadian National Exhibition now in progress in Toronto.

Not only were numerous lines of paper and pulp presented in the various stages of manufacture, but there was also shown spruce seedlings demonstrating the length of time that it is necessary to grow trees of commercial size, so that they can be used in the manufacture of pulp. An erroneous impression prevails that the forest reproduces itself every thirty years whereas it is now firmly established that over twice this period is required.

In connection with the effective and instructive display a carefully prepared booklet entitled "Some Facts About the Pulp and Paper Industry of Canada," was distributed. In paragraphic form there was

imparted much valuable information, which, bearing specially upon the timber wealth of the Dominion, is worth preserving for reference. Here are a few of them:

Canada's forests embrace 350,000 square miles of pulp-wood timber, estimated to yield 1,033,370,000 cords of pulp-wood.

Canada's pre-eminence as a paper-producing country lies in the possession of hundreds of thousands of acres of pulp-wood forests, and to conveniently located water-powers.

It takes the product of 20,000 acres of pulpwood forests every year to supply Canadian newspapers with white paper.

In the first three months of 1918, Canada's exports of wood-pulp to Japan amounted to 11,394,629 pounds, an increase of 2,777,486 pounds over the corresponding period in 1917, and an amount equal to five times Japan's total imports of pulp from all other countries.

Spruce, balsam fir, hemlock, jack pine, tamarack, poplar and basswood are used in the manufacture of pulp.

Quebec's annual production of pulp-wood exceeds 1,000,000 cords. Ontario comes next with about 800,000 cords.

It takes, approximately 1½ cords of wood to make a ton of paper. Spruce trees, best suited to the production of pulp, require from 100 to 150 years to arrive at maturity.

Reafforestation is practical to a limited extent in some of the provinces.

Forest fires are a source of great loss to the Canadian pulp and paper industry and eat up millions of cords of wood-pulp every year.

Initiative—Its Vital Meaning and Personal Application

Dictionaries define initiative as the ability to start or originate.

It is one of the four ingredients in the prize recipe for success—the other three being imagination, industry and enthusiasm!

Christopher Columbus had initiative plus—and no amount of adversity or opposition can defeat a person thus equipped.

Neither he nor any one ever was born with initiative, however. It is cultivated quality. Of course, inherent ability is a big factor in this, as in everything. But the mainspring is ambition—the man who wants to do a thing will find or make a way to do it.

And the man who has a new or better way of doing a thing is the one to-day most wanted.

Initiative is composed of two parts know, how and one part dare-to. It never roosts in cowards or apologists. It cares nothing for titles, rank or riches.

It made of an unknown Corsican the most famous conqueror in history. Less than a century later a train boy out in Michigan tied up to it—and the result was Edison, master of modern miracles.

Initiative plays no favorites. It would just as soon transform a \$10-a-week messenger into the head of the firm as to increase the general manager's salary \$5,000 a year.

It spells the difference between men we are compelled to hire and men who compel us to hire them.

It never waits for the boss to indicate, suggest, infer or propose. It is the art of doing something on your own hook, even at the risk of making a mistake.

And mistakes, if rightly used, are guide-stakes to increased efficiency—based on experience.

It is the most valuable of all attributes in helping a man to overflow his present position and thus automatically demand a larger measure of responsibility and remuneration.

The world never gets enough of it. The demand to-day is greater than ever. And it is one of the few things that laughs at years.

The possessor of initiative may be as bald as a Hubbard squash, but no one will pull the age limit on him. He may be blind in one eye and bowlegged, but so long as he dares and does things, his bank account never will know the difference.

The moral to all this is, "Initiate initiative;" start something work with your head as well as your hands, and putty up your ears against pessimists who prattle about impossibilities.—From Du Pont Magazine.

How Yardman May Develop New Business

Making Profitable Use of Space in Press and Getting Intimately Acquainted with Varied Needs of Community—Start "Building Right Now" Talks

By G. W. Brock

If there is one class of men in the business community who do not make judicious and effective use of publicity as a means of increasing their business, it is retail lumbermen. A glance through many representative weekly and daily papers in the eastern provinces fails to reveal more than ten or twelve announcements of yardmen and the majority of these are simple statements to the effect that John Jones deals in all kinds of building material, lath, shingles, interior trim, flooring and fence posts; prices right, prompt delivery. The bare announcement when printed in the newspaper may have some beneficial effect, but not any more than a business card or leaflet issued for general distribution. Of course any kind of publicity, or advertising to use the more general term, is better than none at all, but to pay for space for the simple purpose of recording week after week and day after day, the name of the proprietor of a business and the stock lines which he handles seems like so much wasted energy, as well as the useless expenditure of money.

If a yard man can only use a small space he should, at least, have something to say and see that the reading matter is changed frequently. Several of the announcements of dealers look as if they had been placed in type months and months ago and given no more attention than the professional card of a barrister, doctor or dentist. The chief fault with retail lumbermen appears to be that he does not take full advantage of the opportunities presented to him for making known his stock, his service and his facilities generally for supplying anything and everything in the building line. He should also capitalize the future and, by a series of stimulating and instructive talks encourage building operations "Right Now". Most men before they undertake anything must have a vision and they generally spend some time in considering the cost, plans, needs, future development, etc., of their undertaking. Anyone who can come in and supply this data at short notice and furnish helpful suggestions and practical ideas is bound to reap a large increase in business.

The Essentials of Getting Results.

Even the advertising that is done by some retail lumber merchants lacks the timeliness and life that are the essentials to producing good results. To be talking about the same thing in season and out of season is not a very intellectual proceeding. There is a time and an occasion for most things, and this is especially true in regard to building operations on the farm where the uses of lumber are constantly being enlarged by the erection of silos, garages, implement sheds, henneries, pig pens and other outbuildings of the latest and improved type. All this opens a wide field for the retail lumberman who should make a close study of the needs of his community. The trade of the rural community is a logical and legitimate arena for the yard man to exploit. Never were farmers as prosperous as they are to-day; never did they have so much money and they should be encouraged to undertake all new structures at the present time by being shown that building is not nearly as costly as the popular conception would have the people believe.

A great deal is heard about practically prohibitive prices of lumber and other building material and this has caused an almost complete cessation of operations. As a matter of fact statistics prove that in comparison with other materials the advance in lumber has been considerably less. Every indication points that little is to be gained in the way of delay or by not going ahead with any proposed building at the present time. The costs of manufacturing lumber are increasing all the time, while the output is decreasing and the outlay for carriage, cutting, logging, etc., is augmented each succeeding season. The retail lumberman should point these facts out in a few instructive talks and drive the conviction home to his prospective customers that delays are not only dangerous, but expensive. Then a few pertinent and striking facts might be set forth in that it is not only desirable to build at the present time, but anything new in the structural line generally adds to realization of the comforts, conveniences, and satisfaction of life generally. Much more might be said along the line of the economics, that can be made possible by the right use of lumber on the farm.

Some Stunts That are Worth Trying.

These are only a few thoughts thrown out and let me tell the retailer if he will watch the columns of any good magazine or farm paper, he will be afforded many pointers on the way to get up his

announcements and make the proper sort of appeal and arouse timely interest on the part of farmers in his community. In speaking the other day with a wholesale lumber dealer he stated that were he in the retail lumber business again he would try to exercise as much foresight as possible and standardize his material, so that he would always be provided with a good stock and be able to furnish as complete a service as possible on lines that are in general demand and for which the quantities do not vary materially each year.

"I do not know just why it is," he added, "but too often is the vocation of a retail lumberman looked on as a leisurely one. Now this should not be in times like the present when the fashions of doing business change and newer and more aggressive methods have to be adopted. Sitting around and bemoaning kaleidoscopic conditions or waiting—Micawber like—for something to turn up will not answer. The chap who gets the trade to-day is the one who goes after it systematically and scientifically, and one of the best means that I know of to bring results is the timely effective and judicious use of printers' ink.

"Now here is the point which I was thinking about the other day. Most every retail lumberman has an automobile and if not he has a horse and buggy at his disposal. I think it would be good business on his part to drive around the country each season and if he cannot get away during the day time he should make the trips in the evening. He would thus get acquainted more intimately with the farmers and by close observation and conversation would learn their individual requirements. He could not fail to note that Mr. Brown's barn needed shingling or that he required a new implement shed as the old one was tumbling down.

Sizing Up the Community Needs.

"He might also take cognizance of the fact that Mr. Green's fence along the road required renewing and there was a chance of the sale of some cedar posts. Then he could note what farmers had no verandahs on their houses, no proper summer kitchens, in fact dozens of things would come under his scrutiny. Of these he should make a note and get after the prospects with a view to securing business the same as implement men, automobile salesmen, piano firms, tractor representatives, washing machine producers and others secure the names of prospective purchasers, they follow up "the lead" until a machine is sold or the prospect is regarded as absolutely impossible.

"I would send out notices to all persons whom I thought required shingles that on such a day I expected a carload of XXX, 6 butts, 2 in. B. C. cedar shingles and to anyone coming after them and taking the material direct from the car I would allow a reduction of 25c per M. The same stunt might be applied to the matter of fencing, and special inducements given to customers who came in for a supply of cedar posts. I would emphasize that one should no longer delay building that dooryard fence as putting off such matters from season to season was false economy. I would make it worth while for the farmer, stock raiser and gardener to undertake some of these small jobs, knowing that my action would invite favorable comment and get the people talking about my business and my enterprising methods. This would all result in larger sales for the personal element between the farmer and the retail yardman is very strong if properly encouraged. There is no man who likes a little attention and friendliness more than the rural resident. Oh yes, the opportunities for increasing business and stimulating activity in the structural line are more to-day than ever before and I have only given you one or two suggestions which might profitably be followed up.

"Perhaps on another occasion if these pointers fructify I may have something more to say on a subject which I feel, while it is receiving a certain amount of attention from the trade newspapers is sadly neglected by the majority of retail lumbermen. Of course, there are notable exceptions and it is not to these that I speak, but rather to those who have, to use a railroad expression in these days of high cost of transportation—been "asleep at the switch."

Advertising Plan That Caught On.

A rather unique, timely and effective advertising plan which attracted a great deal of attention owing to its originality and pointedness was carried out lately by the W. M. Simpson Lumber Co. of Washington, Indiana.

Upon the occasion of a municipal election they had ballots print-

ed on pink paper which instead of containing the names of candidates had listed in the first column about twenty of the principal items of building material carried by the concern. "Opposite each was the usual square for the voter's "X," and at the top the regular "party

VOTE A STRAIGHT TICKET — Do All Your Trading at SIMPSON'S

The Big White Yard By the Depot

☐ **HOUSE PLANS**
Furnished complete to our customers free of charge.

☐ **ARCHITECTURAL SERVICE**
Our architect will advise you on your building or remodeling problems without charge.

☐ **LUMBER**
We will advise you as to the best grades to use for what you want.

☐ **LATH AND PLASTER**
Lime, White Finish, Keene's Cement, Fire Clay.

☐ **CEMENT**
Only the best brands. Ask us for books and information on cement work.

☐ **SEWER PIPE AND DRAIN TILE**
Everything from 3 inch to 30 inch diameter.

☐ **ROOFINGS**
The only carload buyers of asphalt roofings and shingles in Washington. Don't buy a mail-order roofing till you see what we have.

☐ **BEAVER BOARD**
Better than lath and plaster.

☐ **PAINTS**
The Capital City line of High Grade Paints for every purpose. Lead, oil, varnishes, brushes.

☐ **SCREENS**
We make them to order. Exclusive agents for Pearl Wire.

☐ **POSTS**
A big stock of Cedar Posts.

☐ **HAY RACKS AND HAY RACK IRONS.**

☐ **HAYING OUTFITS**
Carriers, Forks, Rope, Track and Pulleys.

☐ **HARDWARE**
Nails, locks, hinges, barn door and garage door hangers and all kinds of builders' hardware.

☐ **LADDERS**
Common and extension ladders. Only first class stock.

☐ **GLASS**
Plate, window, fancy and plain glass of all kinds.

☐ **HARDWOOD FLOORS**
We figure your rooms floor ed complete, ready to use. No charge for our estimate.

☐ **INTERIOR WOODWORK**
Colonnades, built-in bookcases, buffets, china closets, work tables, or cabinet work of any kind.

☐ **DOORS**
Mirror Doors, French Doors, common and glass doors.

☐ **READY MADE GARAGES**
and other small buildings. Come and see them and let us quote you a price delivered on your own lot, ready to use.

"Somewhere In Washington"

☐ **LUMBER**
Anything so it's cheap. Prefer to sell it "unsight-unseen."

☐ **PLASTER**
Any old brand so it's plaster.

☐ **CEMENT**

☐ **CEMENT**
Any brand that no one else in town happens to be selling. Price depends on competition—we have to sell ours cheaper.

☐ **ROOFING**
Guaranteed to be "just-as-good" as Simpson's, and to last 75 years. (The weaker the goods the stronger the "guarantee.")

☐ **SOME KIND OF WALL-BOARD**
Made to sell.

☐ **PAINT**
Our line has very beautiful labels on the cans, and our color cards are just as nice as anybody's.

Vote for the only party with a full ticket—you can fill ALL your building wants at SIMPSON'S. We've got more planks in our platform than any candidate in the field—and they're all good planks, too.

Across the top of the sheet was the injunction to "Vote a straight ticket—do all your trading at Simpson." It is worthy of note that this company furnishes architectural service to its customers, advising them with regard to their building and remodeling problems, and also supplies complete plans, without charge. This feature is given prominence upon the "ballot." At bottom of the sheet is printed this appeal: "Vote for the only party with a full ticket; you can fill all your building wants at Simpson's. We've more planks in our platform than any other candidate in the field—and they're all good planks, too." The "ballots" were tacked up near the polling places, and were also distributed freely among the voters on election day.

Will Make Advances for Housing

Plans are now being worked out by the Ontario Government and the Provincial Housing Committee to give immediate financial assistance to municipalities desirous of at once taking part of the \$2,000,000 loan, the Prime Minister, Sir William Hearst, said recently. A month ago the intention of the Government to loan this amount of money to assist in the building of houses was announced by Sir William. Before all this money can be made available for the use of municipalities legislation will have to be passed. However, the object of the Government was to announce the loan in time to permit of the municipalities to find a way out of the housing shortage difficulty.

Since the announcement of this loan at 5 per cent., the Government and the Housing Committee have been swamped with applications of private firms and individuals for a portion of the loan to assist in building homes. Sir William yesterday made it quite clear, however, that it is impossible for the Government to make loans direct to private corporations or individuals. The Government will only make the loans to the municipalities, and the local councils can enter into negotiations with the individuals who wish loans. It is pointed out by the Government that if it made loans direct to companies it might unwittingly be assisting some "wild cat" building scheme. It would be impossible for the Government to sit in Queen's Park and judge the needs of the districts in which the individuals wished to build.

The Government's announcement has brought many requests from municipalities for further information. These have been followed by statements from a large number of municipalities that they wish to secure part of the loan at once. Most of the applicants are the smaller industrial towns and cities in the Province. However, the plans which are at present being worked out will, it is hoped, permit of the money being advanced at once to these municipalities who are anxious to take steps in their towns to alleviate the house shortage.

When the program is further worked out the Government may find it necessary to limit the date for the receiving of applications from municipalities to share in the loan. This may be necessary so as to permit of a just apportionment of the \$2,000,000 and the necessity of having full information of the needs so as to prepare legislation to submit to the next session of the Legislature.

Good Demand for Timber Cutting Machinery

Acting Canadian Trade Commissioner J. Forsyth Smith, working from Glasgow, Scotland, to the Department of Trade and Commerce Ottawa, says:

The British timber-cutting operations which have resulted from the effort to replace imported stocks shut out by Government restrictions from home sources of supply have created a considerable demand for various lumbering and wood-cutting tools and machinery which Canadian manufacturers who specialize in these lines should be in a position to supply.

It is estimated that the Canadian Forestry Corps and other bodies working under direct Government control produced about one-third only of the total output of sawn timber in 1917, the remaining two-thirds having been produced by the trade. Apart, then, from purchases of tools and machinery under direct Government authority for timber-cutting purposes, a demand exists to supply the requirements of individual operators. Some Scottish firms are in a position to secure the necessary permits for importations and have placed orders with the United States.

Among the lines called for are machinery for portable saw-mills, saw tools, log frames, felling axes, etc. Log-driving and river handling tools are not in demand.

The firm of Edmund LeBlanc & Co., of Wedgeport, N.S., with a number of other residents of that busy centre, have organized themselves into a company and have commenced operations preparatory to the building of a modern fishing schooner. They have taken a lease of the shipyard at one time owned and operated by J. H. Potthier & Co., at that place.

Support the Ticket that Stands for Better Business Methods in the City of Washington

circle," with the name of the W. M. Simpson Lumber Co. therein. The other two columns were likewise surmounted by circles, with "The 'just-as-good' dealer" and "The fellow who peddles a few things" printed therein. In these columns there were listed only a few items.

New Timber Regulations Have Gone into Effect

The Scale of Rates on New Brunswick Limits Announced—License Holders Must Work Lands for Production Purposes—Speculation Prohibited

The new timber regulations made by the Department of Lands and Mines of the province of New Brunswick have gone into effect. All licenses, whether old or renewed, are subject to these new regulations.

Saw mill licenses extend for a period of twenty years from 1st August, 1913, with a renewal of ten years, upon continued compliance with the Act, with the Order-in-Council dated 10th July, 1913, providing for the payment of the bonus as set forth in Act, and these Regulations.

Pulp and paper licenses extend for a term of thirty years, and subject to an extension of 20 years, upon compliance with the Act, and the Order-in-Council of 19th July, 1913, providing for the payment of bonus as set forth in said Act and these Regulations.

The stumpage payable on all logs timber or other lumber, cut or made upon Crown Lands under Licenses, shall be as follows:

For spruce, pine and hachmatac saw logs, per M. superficial feet \$2.50; hardwood timber, up to an average of 14 inches square, per ton \$1.10; hardwood timber, above 14 inches, additional per inch per ton, 10c; hardwood logs per M. superficial feet, \$1.25; pine timber up to 14 inches square, per ton \$2.00; pine timber, additional per inch, per ton, 50c.; hachmatac timber, per ton \$1.10; spruce timber per ton, \$1.50; cedar logs, per M., \$2.50; railway ties eight feet length, each 12c.; hemlock logs, per M. superficial feet, including bark, \$2.00; white birch for spool wood, per cord, 65c.; white birch logs, for spool wood, per M. superficial feet, \$1.25; fir logs, per M. superficial feet, \$2.00; poplar logs, per M. superficial feet, \$2.00.

And for all other descriptions of lumber not specified above, 15 per cent. of the market value thereof, at the mill, place of shipment, or place of consumption in the province.

Permits issued by the authority of the Minister of Lands and Mines to enable licenses to cut undersized lumber on barren lands or thickets, will pay the same rate of stumpage as stated above, with the addition of twenty-five per M. being the cost of supervision. All the lumber cut under this license shall be scaled or taken account of in the usual or customary method of scaling and taking account of lumber for stumpage by some person or persons to be appointed by the Minister of Lands and Mines to be hereafter termed scalers, who shall return to the Minister of Lands and Mines the quantity cut under this license. The scaler and his assistants are to be boarded and lodged at the expense of the said licensee, and should such licensee refuse to board and lodge such scaler and assistant, he or they to report the same to the Minister of Lands and Mines, who may thereupon take such means as he sees fit to provide the said scaler and his assistants with board and lodgings, and the expense thereof shall be paid by the licensee, and shall, until paid, remain a charge and lieu upon all lumber so cut under this license.

The Exact Locality of the Cutting.

All licensees shall, when required, furnish through themselves their agents and foremen, to such agent or agents as the Minister of Lands and Mines may appoint for that purpose, and at such time and place as such agent or agents may require, satisfactory proof, under oath, as to the exact locality where all the saw logs timber trees and other lumber, as provided by this license, in his or their possession, were cut with the mark or marks thereof giving the number of pieces and description of saw logs, timber, trees and other lumber, cut by themselves and others to their knowledge, upon each of the timber berths held or occupied by him or them respectively designating what quantity, if any has been cut on other lands. All applications for license on vacant Crown Lands shall be made by petition and no petition shall be for more than ten or less than two square miles. One application may be sent in for the same ground.

Until stumpage is paid all logs or any lumber cut within the limits of any license shall remain the property of the Crown which shall have the right to seize and sell the same at public auction for non-payment.

All sums due on stumpage shall be paid to the Provincial Treasurer before the first of August next, after the date on which the cutting is made.

No sound buttressed spruce or pine tree shall be cut down by any Licensee smaller than twelve inches in diameter inside the bark; all trees to be cut down at the swell of the roots, with a maximum height not exceeding sixteen inches from the ground; fir nine inch diameter

on the stump with the same restrictions. All lumber to be taken out of the log up to a six inch top for fir; spruce seam, excepting a heavy bushy top, when seven inches is allowed; pine seven inch top. A penalty of \$7.50 per M. will be charged on all lumber left in the woods cut in contravention to this regulation.

To Guard Against Speculation.

As a protection to the Government against lands being held under License for speculative purposes and not operated on, all Licensees shall make such operation annually on the lands held by them under License as may be deemed reasonable to the Minister of Lands and Mines, and the Minister of Lands and Mines shall have the power to call any Licensee to cut an amount equal to at least ten M. superficial feet of lumber for each square mile of licensed land held by him, and may require that such operation or cut shall be made on such blocks of timber lands held by the Licensee as the Minister of Lands and Mines may determine or direct. Should the Licensee prefer to pay the stumpage that would be due on such quantity of lumber a 10 M. superficial feet per mile, instead of making the required operation of cut, he shall have the right to do so in any year, on his notifying the Minister of Lands and Mines to that effect, and

Hon. E. A. Smith, Fredericton, N.B.
Minister of Lands and Mines

obtaining his consent thereto; and such charge in lieu of stumpage shall be payable on or before the first day of August. On failure of the Licensee to comply with any of the foregoing conditions the Licenses shall be forfeited and the berths held by them shall become vacant, and be open for application by any other person.

If the Licensee has any objection to the scale of the Government Scaler such objection must be made known before the lumber in question leaves the brow or landing, so that the objection may be investigated before the logs or lumber are driven; otherwise no subsequent claim for overcharge of stumpage can be entertained by the Government.

The Right to Annul Renewal.

Licensees who have paid their stumpage dues in full and have fully complied with all the conditions of their licenses, on or before the first day of August in each year, shall be entitled to annual renewals for such parts of the ground held by them as may at the first day of July in each year be vacant and unapplied for, on payment of the mileage thereon at the rate of eight dollars (\$8.00) per square mile, payable on or before the first day of August in each year. That no renewal on licenses shall be received unless all stumpage dues have been fully paid as before provided; also provided, that no license shall be reckoned at less than two square miles.

In cutting sleepers or railway ties, the operator must put some

distinguishing mark on each sleeper or tie, and such marks so used shall be furnished to the Deputy Minister of Lands and Mines in each year, before the operation is commenced, otherwise any sleepers or ties cut by the operator shall be subject to double stumpage.

Any person indebted to the Crown Land Department for any sums as stumpage dues shall be debarred from making any application for a timber license from bidding on the sale of any timber license or from having any timber license issued to him by transfer or otherwise.

The saw will be used in felling trees and in cutting them into log lengths. If any logs are cut down with an axe their length for scaling shall be from point to point of scarf, being the extreme length of the log. Six inches above will be the maximum allowance for trimming, but if exceeded the scaler will include in his scale the next foot above in length. A penalty of \$7.50 per M. will be charged on spruce and pine used as skids in the building of roads, bridges, etc., where other species are available, also all lodged trees left in the woods. The lower limbs of every fallen tree shall be lopped off so that the top will lie flat on the ground to rot.

No portable saw-mill will be set up on Crown Land without first obtaining a license from the Crown Lands Department.

The licensee shall have the right to cut and carry away all merchantable lumber upon lots that may have been surveyed within the

tomers? That is where the practical service proposition comes in. The first question that suggests itself to the lumber merchant is what he must do to place himself in a position to render this type of service to his trade.

A Service Department is the first essential, either a special room, or an office corner suitable for the purpose. What a Service Department should include is described in detail in a pamphlet issued by The National Lumber Manufacturers Association. It shows models of granaries, implement sheds, hog houses, poultry houses, dairy houses, corn cribs, barns and things of that character. A model of a building gives a quicker conception than plans to the average layman; but of course this work should be supplemented by plans and other detailed information, which is covered very comprehensively in specific literature by the very best experts obtainable. All of this information should be available to the public through the retail lumber dealer; it constitutes a real service that people are looking for.

The service idea, however, should not stop here. The right selection of woods for both the interior and exterior of homes is one detail that your Service Department takes care of; but the wood for furnish must be painted or finished.

Lumber for the exterior of all types of buildings should not only be painted as a matter of protection, but painted properly. As an example, take pine and cypress. You have probably known of many instances where first class paint has been used on these woods with most unsatisfactory results. Naturally the same paint used on other woods satisfactorily leads to the conclusion that these particular woods are difficult to paint.

This impression is entirely erroneous. The whole secret of success lies in properly thinning the first coat; therefore it is desirable that such information reach the consumer through you. A simple matter to be sure, but it helps make satisfied customers.

A Splendid Source of Profit.

One of the best sources of profit in the lumber business we are told, is the furnishing of interior trim and doors; and from the standpoint of attracting the property owner, architect and builder, this is a leading feature of the service idea.

We will assume that through specification or otherwise, you deliver a home builder trim and doors of the highest quality—well milled and seasoned and of selected figure. Presumably you have done your full duty in the light of past merchandising; but let us see whether this is true or not.

Mr. Home Builder's house is erected (and being an average citizen he is building his one home in a lifetime), but the wood is spoiled or rendered unattractive in the finishing process. Mr. Home Builder is disappointed. His friends and neighbors who inspect the new home are not likely to express much admiration for the very ordinary appearance of the woodwork. The owner's knowledge of woods and finishing being limited, he is naturally disposed to believe you have furnished him wood that is difficult to finish. However, you know that every good commercial wood can be attractively finished if the right specifications for that wood are followed and ordinary care used.

Right here the question suggests itself; Who should have given Mr. Home Builder service on properly finishing his lumber so that it would have been satisfactory to him in the years to come? Naturally, the lumber dealer.

Now let us contrast this with the same woodwork; beautifully finished Mr. Home Builder would have taken pride in his home, and freely expressed his pleasure to others. He would not think so much of the finish used AS OF THE WOOD ITSELF.

What Department Should Include.

A Service Department should therefore include panels of house trim and model doors in all the latest architectural finishes, representing the particular kinds of wood you handle. Thus when you sell a bill of trim and doors you are able to show your customer just how it will look on completed work; give him the proper service on finishing and, as many lumber dealers do, supply the finishing material at an additional profit.

Remember this, that if through co-operation and the service idea you have seen that a more satisfied consumer of wood can be obtained, then you are helping to build up lumber sales and a more profitable business at the same time. In brief, this all works along the line of higher salesmanship that we are hearing so much about in these days and gets away from the price competition idea. The progressive lumber dealer who takes up the service idea is working along the lines of least resistance and for the good will of all concerned.

The handsome fishing schooner Grace & Ruby, which has just been completed for Mr. W. D. Sweeney, in his yard at South End, N. S., was launched recently. The Grace & Ruby is 114 feet over all; 25 beam, 11.2 deep and registers 93 tons. She will be towed to Shelburne to be rigged and fitted with powerful gasoline motor to be ready for the early fall fisheries.

boundaries of the license, and that have been applied for under the Labor Act, for the space of one logging season immediately after such application has been "approved" in the Royal Gazette, and should such lot or lots be "approved after the first of December, the licensee shall have one year from the first of August next following to remove such merchantable lumber.

Where the Service Dept. Helps Out

The Progressive Retail Lumber Merchant Who Takes Up the Idea is Working in the Right Direction

Modern merchandising is so fast becoming linked with the word, service, that no dealer can hope for the success which might otherwise be his, unless prepared to give service to his trade. And the man who sells lumber to-day is something more than a mere dealer; he is a merchant. To sell just so much lumber at a price and let it go at that is not the foundation on which a prosperous and profitable business can be built, because competition is too strong a factor in every territory, says D. T. Breinig.

Good lines, well milled and seasoned, and prompt and courteous treatment are expected in every transaction, but the satisfaction which lumber gives an ultimate possessor is what loses or retains the customer's good-will and secures his future business. A practical service on properly finishing the lumber you sell is the final detail to a pleased customer, as good lumber (trim and doors) unless attractively finished, cannot give the same degree of satisfaction they would otherwise. And there is a great deal of fine wood in these days which fails to satisfy simply and solely because it is "butchered" in the finishing process.

The Practical Service Proposition.

Isn't it natural to assume that the man who sells lumber is the one who should see that it meets EVERY requirement of his cus-

Is Ready Roofing Displacing Shingles?

How Production of the Latter is Being Standardized and the Service Extended— Live Business Methods will be Inaugurated

By J. S. Williams, Secretary, Shingle Branch, West Coast Lumbermen's Association

The best answer to the question "Is Ready Roofing Making Progress Against Shingles?" would be the statistics showing the production, by years, of prepared roofing, and of wooden shingles. Unfortunately complete figures are not available for each year, so that finely drawn conclusions are impossible.

However, it is a fact quite well known that there has been a marked growth in the production and consumption of patent or prepared roofing the past ten years, during which time the number of factories producing prepared products has increased over 500 per cent. The actual production has probably increased in that time at a quite similar ratio. The output of shingles during the past ten-year period has fluctuated materially, but the year 1909 was evidently one of the greatest production in the history of the industry. The shingle production in the Province of British Columbia is increasing annually, every year largely increasing the number of mills. The production in Washington is slightly decreasing, apparently because almost all the readily available cedar timber has been logged off; the percentage of cedar found at the highest altitude being less than along the river bottoms and lowlands. The production in the State of Oregon has not changed materially for the past several years.

Millions of Shingles.

	1917	1916	1915	1914	1913	1912	1911	1910	1909	1908
British Columbia . . .	2278	1900	1895	1060	643	778	900	967	866	725
Oregon	464	472	336			271	393	320	294	
Washington . . .	6753	6739	6313			7996	7745	8333	8879	
Balance of United States . . .		3210	1810			3770	3795	4323	5734	
Grand total	12321	10354				12815	13013	13943	15773	

While shingles are also made from Cypress, White Cedar, Redwood and Yellow Pine, their production comparatively is so small as to demand no individual consideration. Shingle production for British Columbia, Washington, and Oregon, represents approximately 85 per cent. of the total shingle production.

The trade enjoyed by the manufacturers of prepared roofings has been justly earned, because their product has been properly merchandized and extensively advertised. It is said that the advertising appropriation of one prepared roofing company alone ranks among the highest single company appropriations for this purpose. They have put up their product in such a manner that it appeals to the user. They have told him just how to lay it; they have given him in the same package with the roofing, nails and cement necessary for proper application.

Assisting and Working with Retailer.

The patent and prepared roofing manufacturers have from the first realized the importance of assisting and working with the retailer in the sale of their product. All types of approved dealer helps have been supplied—backed up by local advertising and offers of liberal profit. They have maintained an interest in their product until it was properly applied on the roof, and some few companies have given liberal written guarantees.

Even backed up by a but fairly good roofing material, such advertising and such merchandizing are bound to produce a largely increased consumption of their patent roofings—especially since they have met with but little opposition on the part of the manufacturer of wooded shingles.

There has been in the past a general inclination to the belief on the part of shingle manufacturers, that because of the superiority of their wooden shingle product over those of the "Rag Roofing" type, that the popularity of the latter would be of but short duration. This belief, however, has been shown to be poorly grounded because of the disregard of the possibility of improving both the form and quality of their prepared product, adding to its worth and service.

Need of Alertness in Marketing Methods.

If the manufacturers of wooden shingles had been one-half as alert in developing and improving their marketing methods—stabilizing their grades—and backing these activities up by a comprehensive ocean to ocean advertising campaign, one-half the patent roofing factories would never have been built. If advertising and merchandizing

efforts are equal in points of cleverness, the better product is bound to have the greater sale. Even the layman knows that the oldest roofs in Canada and the United States are those covered with shingles.

Inherently, long life, serviceability, protection, and beauty, in roofing materials, are to be found most fully in shingles, and when shingles have not given satisfaction it can be traced to some error on the part of man—either in the manufacture, seasoning, or laying of the shingles—rather than to a natural inadaptability of the wood for a shingle roofing product.

There are many places where a shingle should not be used. They are not satisfactory on a flat roof; they should not be used in the congested, commercial district. And no manufacturer or distributor who has the interests of the shingle industry at heart will promote their use in such locations. The consumption of patent roofing used in this manner should not be considered a displacement of wooden shingles, because wooden shingles should not be so employed. The judgment of those who have made an impartial study of roofing materials, how-

B. C. Shingle Output will be the Greatest Ever

By Frank L. Nash, Secretary Shingle Agency of B. C.

Frank L. Nash, Vancouver

While we do not know that prepared roofings are not making some progress against red cedar shingles, we do know that the output of red cedar shingles is increasing annually, and that manufacturers find ready sale for all that they can produce.

The production of British Columbia red cedar shingles in 1916 was 1,900,000 M. In 1917 the production was 2,278,205 M., and we believe that if the manufacturers are able to get sufficient help during the balance of 1918 that the output this year will exceed even that of 1917.

The Shingle Agency of British Columbia have entered upon a very extensive publicity campaign, which no doubt will produce a larger demand for red cedar shingles. This advertising will be carried on in all of the leading farm and other journals of both Eastern and Western

Canada, and will be in the way of an effective educational campaign.

ever, must be that no other material so satisfactorily fills the requirements of roofing for a home, a farm building, a storage shed, or many other familiar types of buildings, as do wooden shingles.

Shingles Can be Prevented from Warping.

Scientific studies, experiments, and investigations have revealed to man a method of making shingles highly fire-resisting. With intelligent care in manufacture, and treatment with certain stains or paints, shingles can be almost completely prevented from warping or curling.

Rust-proof nails will eliminate perhaps the greatest factor against the long life of the shingle roof; because they will hold a shingle securely in place until that shingle's mechanical life is run, fifty years or so hence.

As has been suggested earlier in this article, shingles have not been properly manufactured—have not been properly advertised, but the signs are hopeful; in fact, there is every indication that this trait of the shingle manufacturer that has lain so long dormant will be developed and energized to such an extent that he will soon take his place alongside the manufacturers who have long since found out that not only honesty of manufacture is necessary, but an intensive interest in their product at all times.

The Single Branch, West Coast Lumbermen's Association, has developed a plan that is working out admirably, whereby the shingle production of their members is standardized and inspected. The use of their trademark is granted by the Association to the mill whose

products are found to comply completely with the standard. The Association then nationally advertises the trademark, together with Red Cedar Shingles, as opposed to other types or roofing, gives the dealer a comprehensive selling service, and puts the sale of these trademarked shingles on a sound merchandizing basis.

Extending Co-operation and Sales Assistance.

The results are: First, a product of known quality that will give better service; second, the advertising creates a desire to build with Red Cedar Shingles, greatly increasing their consumption; and third, the retailer is given by the Association their co-operation and sales assistance.

Patent roofing has extensively displaced the wooden shingle—statistics make this self-evident. Whether this displacement will continue is directly up to the stumpage owner, the logger, and manufacturer of red cedar shingles. They hold the solution of this question in their power. It is their problem exclusively, and the amount of displacement will be directly proportionate to their efforts toward an intelligent merchandizing of their product in the fullest meaning of the phrase. Upon whether their effort will be commensurate with the worth of their roofing product lies the entire solution.

Hoo Hoo Annual Meeting Postponed for Year

After consulting the members of the Supreme Nine and House of Ancients regarding the 1918 annual, Snark of the Universe, W. A. Priddie has instructed Secretary-Treasurer, E. D. Tennant to announce that it is the unanimous opinion of the executive boards of the Order that, for patriotic reasons, the 1918 Annual Meeting be postponed, to take place in Chicago Sept. 9-10, 1919.

The reasons that induced the Supreme Nine and House of Ancients to come to this decision were principally that, owing to a large proportion of the members being engaged in the manufacture of lumber, which is an essential win-the-war industry, they should not be asked to take time from their work to attend an annual meeting; also, that the fourth Liberty Loan is due Sept. 28th.

The cost of attending an annual this year would be almost double any previous year and, as the members of the Order of Hoo-Hoo are determined to do their utmost helping the government win the war, they felt it was the patriotic duty of the members to forego the pleasure of meeting their fellow Hoo-Hoo at an annual conclave.

Contained Something of Value to All

"The Canada Lumberman and Woodworker, Toronto, has made its August 1st issue an Annual Number for 1918. The Editor and Publishers are certainly to be congratulated on the attractiveness of the issue and the quantity of interesting and valuable information which it contains. Many annual numbers of trade journals are simply a collection of write-ups of manufacturers catering to some particular trade or reports of a trade convention. This number of the Canada Lumberman, outside of its large advertising section, has a collection of contributed articles among which everyone connected with the lumber industry will find something of value. The cover carries one of the nicest reproductions of a forest view that we have seen in a long time."—The Pulp and Paper Magazine of Canada.

Practical Education in Forest Protection

A Travelling Exhibition Car has been equipped and started on its rounds from Ottawa to Nova Scotia by the Canadian Forestry Association. This car, which forms a unique enterprise in forest protection propaganda, will be equipped with French and English lecturers, motion picture machines, a comfortable lecture room and a series of forestry exhibits, including wireless and telephone sets in operation, model airplane, model nursery and other objects illustrating the same subject. Large banners cover the outside of the coach with strings of flags and a wireless aerial adorns the roof. The car will be hauled from Ottawa to Mattawa, Kipawa and North Bay, and will complete its journey at Halifax, N. S. The Forestry Association is advertising the coming of the car liberally in advance, and it is expected that thousands of visitors, particularly in the smaller settlements and railroad towns in forested areas, will pay it a visit during the next two months.

Rafting Swedish Lumber Across North Sea

According to the British Timber Trades Journal the Rafanüt Aktiebolaget has been formed in Stockholm to exploit new methods of shipping wood, in view of the anticipated shortage of tonnage after the war. The plan is to raft the lumber across the North Sea, and it is to be specially noted that the company's idea is to facilitate the shipment of sawn goods. Some previous experiments in floating large masses of logs have been successful, but it is thought that no previous attempts have been made to float sawn logs long distances at sea.

Canada's Timber Exports After War

More Old Country Firms Have Something to Say on Vital Question of the Overseas Demand

Regarding the outlook for the lumber trade from Canada to the United Kingdom after the war Londarco, Limited, of London, Eng., say:—

"It seems to us that all conditions are in such a state of uncertainty that it is hopeless to formulate any opinions. In the first place we do not know when the Government control of the trade will be given up, nor what their policy will be meantime. Next, we have no idea what the position in Russia will be. It turns chiefly on that and government control. If Russian shipments of lumber were to come into this market in anything like the pre-war volume, we do not see why the trade with Canada should increase in volume to any great extent; but even then we suppose some increase is probable. This refers to pine and spruce, hardwoods ought in any case to show a marked increase in quantity over pre-war days. What will happen in the case of furniture (bentwood chairs, dowels, etc.; washboards and so on depends on the Government policy as to protecting home industries, but the protection seems impending and must diminish imports, even from the beginning. What will certainly be wanted in large quantities from Canada is Plywood, especially birch and maple. We have a special department for that and are making arrangements to buy as soon as it is possible. Shall be glad to hear from plywood factories in your country"

What Colonial Preference Will Do.

Edmiston & Mitchells, of Glasgow, have the following opinion on the prospects:

"To intelligently anticipate what is likely to happen as a result of the war or how the situation in relation to imports of timber from Canada may be affected is next to impossible until many things at present obscure are cleared up. What must prove an important factor is the attitude this Country will adopt in relation to imports, whether, in fact, the old conditions are to continue or a scheme of protection evolved. Free trade has for a so long been identified with this Country that it is no easy matter to disturb the conviction of those—and they are many—who believe the great prosperity we have enjoyed since its inception is due to it and it alone: but there is a growing belief that this may possibly be a popular fallacy. Apart from whether it is or not, there can be no question one result of the war will be that the views of those advocating the necessity of adopting a Colonial preference policy will meet with sympathetic consideration, even from those who, a few years ago, would have unhesitatingly condemned any form of protection.

"The feeling we should say in the timber import trade is pretty well unanimous in favor of Canada receiving preferential treatment enabling them to compete on more favorable terms than they can at present (owing to higher transportation charges) with the North of Europe Countries, hitherto the chief sources of supply to this Country. If nothing is done in this direction, then Canada must once more face the old opposition from Sweden and adjacent Countries so far at all events as Spruce and Norway Pine are concerned. In the case of White Pine, Canada has to meet the competition of Siberia which is the only Country to seriously challenge the supremacy of that popular Colonial product, but in this case the transportation charges are at least as heavy. You ask what we might suggest in the direction of fostering Imperial relations and you will gather our view is, that it is largely a political question and that Colonial preference is of vital importance towards the development of Canadian exports to this Country. Nothing your Government can do towards the accomplishment of this object should be lost sight of, as on its success largely depends the great expansion in trading between your Country and ours which would as a consequence inevitably follow."

Are Installing Kendall Gang Circulars

The William Hamilton Company, Ltd., Peterboro, Ont., for over sixty years manufacturers of High Grade Saw Mill, Pulp Mill and Hydraulic Machinery, report business very good, being especially busy at the present time. While the call for new Sawmill Machinery is not so brisk as before the war, nevertheless a good deal of business is still offering. They have just shipped one of the latest designs of Kendall Gang Circulars to take 12 inch cants, up to Messrs. Lauder, Spears & Howland at Pakesley, Ont., and are at present working on another of these machines to take 36 inch Saws for The Davison Lumber & Manufacturing Company at Bridgewater, N. S. Both these machines are the last word in Kendall Gang Construction, and as the firm have been manufacturing these machines for over thirteen years now, they are most enthusiastic over what they can do and will do.

SAWDUST As an Emergency Raw Material for Papermaking

By James Strachan, Chemist to the Donside Paper Co., Ltd., Aberdeen, Scotland.

Sawdust and wood shavings, as paper-making materials, were first used in this country in the year 1801 by Matthias Koops, at Neckinger Mill, Bermondsey. This paper was the first sheet made from wood and contained none other fibrous material. The pulp was prepared by digestion of the wood in weak alkaline liquors, heated at atmospheric pressure only, followed by the old-fashioned methods of slow disintegration in the stamp-mill and hollander. This was the first successful attempt, on a practical scale, to isolate the cellulose from wood or papermaking purposes. The resulting paper was yellow in colour, but even after 117 years a sample of the same compares very creditably with many of the freak productions displayed by discoverers of new raw materials in modern times. A microscopic examination of this paper made by Koops shows that more than one-half of the wood pulp was in the form of fairly pure cellulose, and the remainder of more or less lignified tissues, so that, under the microscope, it presents the appearance of a mixture of mechanical wood with bleached soda-pulp.

In the early days of mechanical pulp, considerable quantities of "wood-meal" were imported for papermaking purposes from Norway, but the grinding of wood-waste into "meal" and "flour" soon gave way to Voelter's process of wet-grinding logs against a revolving grindstone, whereby greater length of fibre was retained and increased production. Voelter's first patent was taken out in 1858, but it was some ten years later before the wet-grinding process began to attract the attention of the papermaker in this country.

The First Cellulose from Wood.

The first attempt to make a pure cellulose from wood in England was carried out by Burgess in 1851. He made good pulp by boiling the wood with caustic soda and bleaching the soda-pulp, but failed to win the favor of the English papermaker. Burgess took his patent to America in 1854, from which date commenced the successful manufacture of soda-pulp in that continent. About sixteen years later the manufacture of cellulose from wood by the soda process was commenced on a practical scale in this country by Sinclair's process. In 1871 William Clapperton described this process, including experiments done with sawdust and wood-shavings. The latter materials were rejected in favor of wood-chips; the sawdust yielded too short a fibre and the shavings were too bulky for filling the boiler.

Since the successful introduction of mechanical wood and wood cellulose during the last quarter of the nineteenth century in this country the utilization of small wood-waste as a papermaking material has been proved to be an unprofitable proceeding.

A limited amount of sawdust was ground up into "flour" and "meal," which are in reality finer sawdust, for the manufacture of linoleum and absorbents. The bulk of the wood flour used for these purposes was, however, imported from the Continent, where the old-fashioned stone mills had been largely displaced by specially-designed steel roller mills yielding a large output of a non-fibrous nature. The main object in the production of an absorbent flour from wood is the chopping up of the fibre bundles as much as possible; exactly the reverse of that required for papermaking purposes.

Within recent years sawdust has been used in Germany for paper-making purposes, but only to a very limited extent. The chief use of this material in that direction was as an addition to the furnish in the manufacture of strawboards for the purpose of opening out or "freeing" the wet stock. In this case the sawdust was boiled with very dilute alkaline liquors and disintegrated mechanically.

The Possibilities of Wood Waste.

With this knowledge of the history of sawdust as a papermaking material before us, the question arose as to the possibility of using wood waste as an emergency material for eking out the limited supplies of fibrous stock in war time. Experiments in the laboratory soon demonstrated that the coarse sawdust from our home saw-mills could be made to yield a valuable product which was more than a mere filler. The grains of sawdust measure from 1 to 6 millimetres in length, the latter being about twice the length of the average wood tracheid or fibre. A photo-micrograph of such sawdust looks like so much firewood, so much so in fact, that a child of four years, before whom the photograph was placed, described it aptly as a picture of "sticks."

The experiments of Koops were easily repeated in the laboratory, and paper made on a scale from sawdust alone, but the economical production of fibrous material in large quantities from sawdust was another question. Koops' days were the days of hand-made paper, when a ton of material went a long way, but our problem was to

produce the material in sufficient quantity to help the production of modern fast-running news machines.

In this matter Mr. F. E. R. Becker's wide knowledge of practical methods in pulp manufacture enabled him to decide, and under his personal direction practical experiments on a large scale were carried out in the Donside Paper Mills with a considerable degree of success.

The experiments have been conducted on these lines:—

1. The disintegration of sawdust in stone mills, formerly used for the manufacture of wood flour.
2. Wet grinding of sawdust in stone-filled refiners, as used in mechanical mills for reducing chips and screenings.
3. The production of brown pulp by boiling the sawdust in dilute alkali under pressure, followed by mechanical disintegration.

In the first method the best results were attained by grinding the "green" sawdust as received from the saw mills on sandstone. The sawdust in this condition contains about 30 per cent. of moisture, and produces "saw pulp" composed of fibres and fibre bundles 1 to 2 millimetres in length. During the grinding a portion of the moisture is driven off as steam, and there is no dust as in wood flour grinding. The ground saw pulp is finally sieved to remove coarse particles of wood.

How the Process Works Out.

In the second process the sawdust is sieved through a coarse mesh to remove large pieces of wood and bark, mixed with warm water to about 1 per cent. consistency, and run by gravity through a stone-filled refiner. The refiners used were constructed by Boving and Co., of London, and are exactly the same in construction as those supplied by that firm to wood pulp mills. This method of grinding is best adapted to the disintegration of soft white-wood sawdust, yielding a finer product. The pulp is finally passed through a system of strainers where the coarse particles are removed, and thence to a concentrator. The coarse pulp retained by the strainers is returned to the refining system for re-grinding.

In the third method, for the production of brown pulp suitable for the manufacture of coarse brown paper and boards, inferior grades of sawdust from resinous woods are boiled at 40 lbs. per square inch steam pressure with liquid containing 10 per cent. of lime and 1 to 2 per cent. of soda ash calculated on the weight of the sawdust. The boiled sawdust is then easily reduced in the edge-runner to a fibrous pulp suitable for the purposes indicated above. The time of boiling depends upon the circulation of liquor in the boiler. Good results have been obtained in a stationary boiler fitted with external means of circulation on Boving's system, but the rotary boiler would probably be found more convenient in most cases.

The sawdust from the home saw-mills is very much mixed in character, containing both non-resinous white woods and resinous woods. The saw-mills find it impossible to separate spruce and white-woods from more resinous species. This is the chief difficulty in producing white saw pulp suitable for a "news" furnish, but by careful selection of the sawdust from localities where the white woods predominate good results have been obtained.

Saw Pulp Worked Very Free.

During a trial run superintended by Mr. Becker, and at which Mr. G. R. Hall Caine, Deputy Paper Controller, was present, "news" paper was made from a furnish containing 30 per cent. sulphite, 35 per cent. waste paper, and 35 per cent. saw pulp, which ran well on the machine and was not inferior in strength to "news" made without the latter material. The saw pulp worked very free, and on this account it is advisable to work waste papers into the furnish.

We do not claim that it is possible even at the present time to make paper from sawdust alone as Koops did, nor that it produces a superior paper. We are convinced, however, that as an emergency raw material the use of saw pulp will effect an important saving in National economy at the present time. In America, where larger quantities of white-wood sawdust are available, there should be no difficulty in commencing the production of saw pulp on a large scale. Meanwhile we are steadily increasing our output of this material, and continuing experiments on a large scale towards overcoming the various difficulties presented by the mixed woods of our home woodlands and discovering the most economical methods of dealing with them.

Portable Houses for Railway Laborers

The Michigan Central Railway Company are making arrangements for the erection of a number of movable dwellings on their property in St. Thomas, Ont., for the use of their laborers, who have previously been housed in freight and passenger cars. Permits for the new buildings were issued by City Engineer Ferguson recently. It is estimated that the structures, which will be one-storey affairs, will cost about \$300 each, and about one dozen will be built to start with.

"The Best Ever" was Bathurst Picnic

The big picnic of the employees of the Bathurst Lumber Co., of Bathurst, N. B., was held on Saturday, August 10, and was attended by more than five thousand happy people all of whom joined heartily in the festivities. The various athletic events were closely contested and aroused lively interest while the proceedings of the day were characterized with unity, happiness and sociability that will long be remembered.

For several weeks large and energetic committees of the Company's employees had been laying plans and making preparations, and as the day approached all interested were hoping for favorable weather. In the early morning the prospects of the fine day were none too bright; dark, heavy clouds obscured the sky and the picnickers felt rain in the air. The plans already made did not hesitate for that, however, and the ideal weather conditions which later in the day attended the picnic justified the optimism of the workers and contributed to the success of their efforts.

The extremely thorough and complete organization of every part of the day's occurrences was the wonder and the admiration of all. From eight o'clock in the morning when the first boats left the West Bathurst and Pulp Mill wharves, until the last dance long after dark every detail moved at just the time and in just the way it had been designed to do. There was no rush or excitement either, but everything was conducted or seemed to conduct itself in a most orderly, methodical manner.

The two Company tug boats the Betty D and the Nepisiguit were gay with flags and decorations, and transported the bulk of the employees to the picnic grounds. The Betty D. with large scows

Part of the crowd on the way to the picnic grounds

on either side on which seats and railings had been constructed, carried the people who gathered at the pulp mill wharf, while the Nepisiguit, similarly equipped, accommodated the people from West Bathurst.

The boats landed their loads of excursionists at Alston Pt., where a large lighter had been beached to serve as a pier. Gangways led from it to the sandy beach and it was the work of only a few minutes for them to disembark their hundreds of passengers, so perfect were the arrangements. At the picnic grounds nothing seemed to have been forgotten in the way of completeness of detail. Large signs erected here and there directed the crowds to the different points of interest. Even the places where horses were to be tied automobiles parked and the roads leading in and out of the grounds bore huge placards directing the way, and the result was that no confusion or accident marred the day's proceedings.

The ladies of the Red Cross had been provided with a number of booths near the centre of the grounds, bearing the title "Red Cross Alley." Here in becoming costume the ladies held forth all day with such attractions as "Swat the Kaiser," Cane Toss, Fish Ponds, Wheel of Fortune and Fortune telling, cigarette and tobacco booths. These attractions were rushed all day until late in the afternoon when most of their supplies were exhausted and realized for the Red Cross the handsome sum of \$785.00. All their supplies were given to them by the Bathurst Lumber Co., and even their booths were constructed by the same agency.

Mr. and Mrs. Angus McLean headed the Reception committee, which consisted of many of the most prominent employees of the company and their wives, and throughout the day they did their work well, making the great crowds feel at home and keeping the picnic spirit going all the time. The active management of the details of the picnic was in charge of Mr. J. H. Thickens and too much cannot be said in praise of the thorough manner in which he performed his arduous and exacting duties.

The standing of the different mills in the athletic contests resulted as follows, Pulp Mill, 192 pts.; Saw Mills, 132 pts.; Town Office, 39½ pts.

The winner of the largest family prize recorded a family of 17,

nearly all of whom attended the picnic. The winner of the prize for most boys at the front had the proud record of five sons serving the colors.

Just What "Log Run" Means

For the information of members, the July bulletin of the Hardwood Manufacturers' Association of the United States designates what is meant by the term "log run" in the various hardwoods. The bulletin says:

"Log run" means the full run of the log, with all boards included that will cut 50 per cent or better into sound cuttings, walnut and cherry excepted, which woods will allow a minimum of 33 1-3 per cent sound cuttings.

There is no such legal term as "log run, mill culls out." The words "cull" and "mill culls" are out of existence.

"Buy Lumber Now" is Sound Advice

Heed the lesson of last winter's railway congestion, buy your lumber now, and then, above all else, see that it is shipped promptly to its destination. This is the warning to lumber dealers and consumers issued by the National Lumber Manufacturers' Association of Chicago. It is announced that a serious situation threatens if the warning is not promptly taken cognizance of. With the demands that the heavy crops shortly will make upon the railroads of the country, a car shortage is looming in the near future.

In a comparison of the lumber situation of the nation as a whole with that of fuel requirements, it is pointed out that lumber is just as essential to the welfare of communities as the fuel with which homes are heated, or factories operated. Adequate housing requirements make it necessary that dealers shall have upon call sufficiently large stocks of lumber to fill the needs of their respective communities.

At the present time plenty of cars are available. A few weeks hence, it is pointed out, the shortage will be upon the country. The roads will be overburdened with the work of moving the national crops and lumber and other commodities will have little chance.

In this connection the association states that it is just as important that consumers of lumber obtain their supplies as it is that the dealers do this. In fact, according to the statement, it is more important, for the reason if the dealer is short he alone is at a loss financially, while if the consumer is short he is not only at a loss financially, but his condition creates a more serious situation for the community at large.

The association calls attention to the fact that dealers by buying now, when the railroads are clear and transportation is reasonably quick, can replenish stocks in minimum time and with a minimum of cost, with the result that a possible lumber famine will be averted. Because of government price-fixing and also because of the freight rates lumbermen have kept off the market.

Now that the new freight rates have gone into effect, says the association, and more particularly because the intent of the government on price-fixing is fairly well known, there is no good reason why buyers should not come into the market, particularly when the car situation is taken into consideration.

The prettiest launching yet held on the St. Mary's Bay shore since the inauguration of the present shipbuilding boom, took place lately from the yards of the Comeau Shipbuilding Co., at Comeauville, Digby Co. N. S. This splendidly built vessel has not yet been named. She is 446 gross tons.

Model Camp for One Hundred Men

Steam Heating Advocated in Place of Stoves and Ample Accommodation for Wives and Families of Lumberjacks

By Alfred Fitzpatrick, Superintendent of the Reading Camp Association, Toronto

In an article that you were kind enough to publish in your issue of March 1st the writer advocated reform in the housing of frontier laborers. A separate room was urged for single and a cottage or suite for married men. This was attacked by several lumbermen as Utopian and the author of the scheme as a day dreamer.

That the reform is needed, lumbermen themselves admit. In fact the worst criticism of lumber camps that I have heard came from the lips of a lumberman: "They, (the camps) are no fit place for women." It is self evident that any place on land or sea that is unfit for women is equally unfit for men, either from a moral or sanitary point of view.

It is high time that woman should be introduced to all camps and works. A few are there already. There are many occupations in which they can engage such as laundry, clerical and culinary tasks and last, but not least, social and educational duties. The writer knows a lumber company who employs a woman to take charge of the laundry at each of its camps. These positions are so popular that they are contracted for a year ahead.

There is little doubt but that the absence of woman from camp life is the greatest of its evils. After a month or two in camp, and especially after several months men with whom you get well acquainted will confess to a certain indescribable vacuum which for want of a better name they term "bush feeling." Anyone who has lived on the frontier knows exactly what the navy, logger and fisherman mean by the expression "bush feeling." Without reflection on the splendid organization known as the Y.M.C.A., the writer once asked a camp school inspector why he did not stop at the "Y" instead of the hotel when he came to town. He replied: "Too much like the bunk-house. I like to see a woman once in a while."

To remedy this evil the frontiersmen should be encouraged to take their wives and children with them and a teacher should be provided. With very little extra expense a pathoscope could be used and an ideal education easily be given. In small camps the same instructor could teach the children during the day and the grown-ups evenings. What a perfect laboratory of forest and mineral wealth is at hand: Forestry, botany, geology, minerology, agriculture, carpentry, blacksmithing, etc.

Take Whole Family Into the Camp.

It would be vastly more sensible, humane and economical for a lumberman to take the whole family than to take the husband only, leaving the wife to care for a baby, shovel snow and cut ice in the river to water the cow. The cow and wife and baby are all needed at camp, quite as much as the man. Only through the presence of the women and children can the single man as well as the husband be taught the way of life. No amount of preaching or teaching will take their place.

Steam heating should take the place of stoves for several reasons:

1. To lessen the danger from fire. The average bunkhouse is a death trap heated as it is with a red hot stove with all kinds of clothes overhanging and lighted with the aid of the ever present coal oil can.
2. To provide hot water for laundry and bathing facilities. Should the expense be greater than the margin of profit would warrant then let the consumer pay more for the lumber and the country bigger figures to the contractors for limit holders. Better this than that our young men should be demoralized, moral and physical diseases engendered and spread broadcast, and asylums, prisons and poor-houses filled. Not a few mining companies have abolished the bunkhouse, and have introduced steam heating. Why not lumber companies, too?

Lumbermen reply that the temporary nature of the camps does not warrant the expense.

The answer to this is that very many lumber camps are not temporary and warrant a great deal more expense put on them than has been spent in the past. Men should be given a chance to live and work in decency for even one season. One season of eight or nine

months is a comparatively long period in the working life of a man. There are at least 2,000 lumber camps in operation in Canada that last for two or more years. It would be a God-send for even the lumberjacks, who work at these camps, approximately 150,000 men, if they were as decently housed and cared for socially and educationally as they are well fed.

"We Do Not Ask for Palaces, But —"

Lumbermen and contractors have long realized the benefit of wholesome food, and have made commendable efforts in recent years to furnish it in abundance. They have not paid proportionate attention to the housing of their men nor to their education and social uplift. Consequently camps of all kinds have been little more than wayside inns. Jumping has been the rule rather than the exception. The time has come for a change for the better. We do not ask for palaces, but we ask for the Canadian navy, lumberjack, miner and fisherman as good accommodation at least as for the engineers on railway construction. Those who have walked along the right-of-way of a new railway for the first time have often been delighted after battling with muskeg, mud, mosquitoes and black-flies to look up suddenly and see a set of log buildings on high ground with an air of spick and spanness, overlooking ocean, lake or river. A considerable area was cleared about the buildings, a few shade trees were left here and there, and a well planted flag pole with the Union Jack joyfully fluttering to the breeze capped the climax of artistic arrangement.

Your first impression was that the president of the road, the prime minister or other magnate has his fishing lodge here. On enquiry it was a further surprise and pleasure to be told that this was fittingly provided for no one higher up than for the divisional engineer of the road.

There was one building with nearly a dozen sliding windows provided with screens and screen doors. That was the workshop of the divisional engineer and his assistants; over there was a neat little shack with peeled logs containing two rooms, one a large room, a dining and sitting room in one; and a bedroom; also a lean-to, which served the purpose of a kitchen and all this was for one of the engineers and his young wife.

Wouldn't the sun shine a whole lot brighter and Canada be brought a great deal nearer the conditions of the Kingdom of God, and wouldn't the great clash looming up between capital and labor begin to be driven indefinitely back into oblivion if as much were done for the frontier toiler.

The Average Life of Lumber Camp.

One lumberman replied to the writer's appeal for better housing conditions for lumberjacks to the effect that lumbering operations were in the nature of emergency work such as war, and that the men in the advanced posts could not expect good housing. The cases are by no means parallel. There is no such feverish haste to destroy our beautiful forests as to demolish the German army. Besides, steam heat is usually provided for military training camps, which are much less permanent than lumber camps. The average life of a lumber camp is 2½ years. Few if any lumber camps exist for less than one season. In the case of military camps of even two or three months' duration, if the whole camp is not heated with steam they are, at least, provided with jacket heaters and running hot and cold water for washing and shower baths. There is no reason under the sun why every lumber, mining, construction and fishing camp in Canada should not be fitted up with a jacket heater and running hot and cold water. A large tank can be built at little expense in the upstairs or attic of an inexpensive log building. In middle and eastern Canada where ice roads are used for hauling logs, a tank can be filled once a week by the water wagon, or oftener if necessary, without extra expense or inconvenience. The jacket heater will save buying a stove for that particular building, the other end of which could be used for a dining room or for reading and entertainment. Jacket heaters with showers, taps, etc. can be had from \$175.00 to \$200.00, according to the size required. The former would be sufficient for a camp of 100 men. The cost is the merest fraction of the output.

Walking through the Yellow Head Pass I have seen station men

on the right-of-way wheeling their barrows of gravel, clay and muskeg at 3 o'clock in the morning and at 11 o'clock at night to build railroads paralleling each other. Within the short space of seven years I have seen one of these roads in the Pass abandoned and its steel lifted and taken where it would serve a real purpose.

Why Such a Rush to Cut Pine?

Why all the mad haste to cut our beautiful pine? Is it needed? Certainly not, except in the mind of some ambitious lumbermen. One of the biggest operators in New Brunswick three months ago told me that there was pulp wood enough lying along the C. G. R. to keep that railway busy for the next two years.

The reader may think it unbelievable, but it is nevertheless true that not one marketable pine tree can be seen from a train window from ocean to ocean on any of the railways except when passing through the Temagami and Algonquin Park reserves and these are

fits to be derived from the training of the army will be the utilization of this sanitary sense in family and communal-life. Public health and sanitation will be improved and loss of life in battle will be made up by increased vitality and added longevity of those who eventually return to civilian life. I think that among the greatest and most glorious victories of this war you will find numbered the conquest of disease and dirt."

The Efficacy of Frequent Baths.

The soldier who for long, weary hours has patrolled the kitchen and latrine, as well as the sleeping quarters, has learned in a hard school the deadly danger of filth in proximity to humans and their food, when both are exposed to the myriad visits of the house-fly, mosquito and other pests. He has learned, too, the necessity for the isolation of contagious diseases. Reform will begin in the cities, but it will not end there, as the returned soldier will re-enter every walk of life and engage in every occupation known to the frontier as well

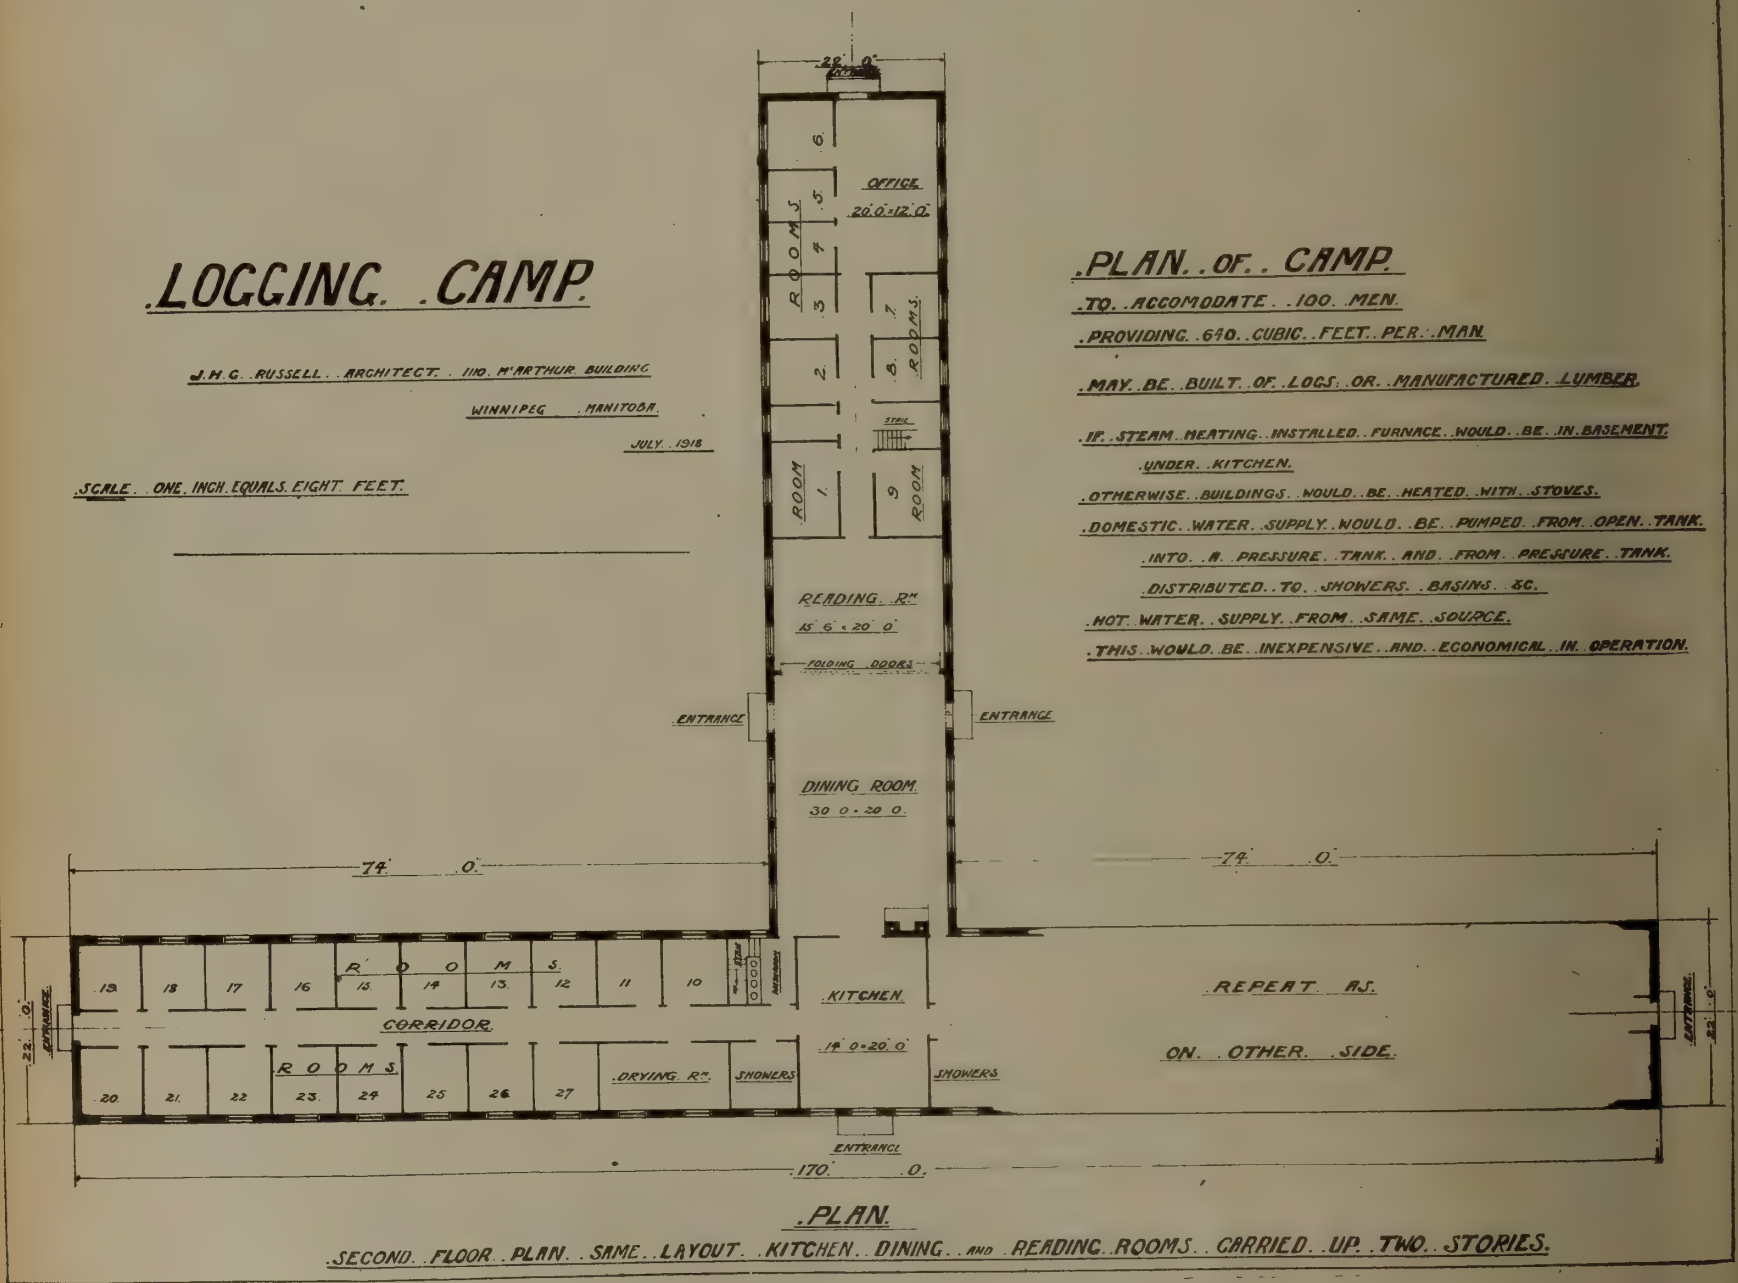

LOGGING CAMP.

also being cut and with very little attention to the preservation of the young trees.

The lumbermen referred to who compared the life of a lumberjack to that of a soldier as a reason for neglecting the housing and cleanliness of the men, overlooked the fact that the soldier of the Allies, at least, is a clean man. Our army commanders know the value of the daily bath to the soldier. Every soldier has an opportunity to bathe except when in action. The Belgian army has a travelling bath caravan which was presented by the Wounded Allies Relief Committee. Capt. Abbott, in the May '18 issue of the American Journal of Clinical Medicine writes: "The cleanest man in the world is the well-trained, fully disciplined American soldier." The same may be said of the Canadian soldier, and depend upon it the soldier whose sanitary sense has been developed by the war and who will return to resume navvy work here is not going to submit meekly to the old way of living. In fact, Dr. Abbott emphasizes this point: "One of the bene-

fits to be derived from the training of the army will be the utilization of this sanitary sense in family and communal-life. Public health and sanitation will be improved and loss of life in battle will be made up by increased vitality and added longevity of those who eventually return to civilian life. I think that among the greatest and most glorious victories of this war you will find numbered the conquest of disease and dirt."

as to the city. Now is the time to anticipate the returned soldier, and leave no room for his criticism which he will not be slow to utter if the slightest opportunity is afforded. Moreover, it is good business for an employer to see that his men bathe frequently—once a day if possible. As stated above, employers of frontier labor have in recent years endeavored to furnish their camps with abundance of wholesome food. Few lumbermen, however, asked themselves the equally vital question: "Do these men make the maximum use of this food?" Since a very large percentage of food is excreted through the pores of the body it will be seen at a glance that the ability of men to do their work for any length of time, their peace of mind and consequent steadiness depend to a great extent upon the condition of these pores. Contentment, relief from fatigue, self-respect, health and happiness are promoted by means of baths. Shower baths are the cheaper and are more sanitary unless tub baths are followed with a shower.

The value of bathing in keeping the pores of the skin open may

be illustrated by the following true stories: A woman who was devoted to her dog which, by the way, had very long hair, the kind of a dog that looks like an animated door mat, realizing that the animal had accumulated dirt galore in its woolly folds was told on enquiry that it would take cold if she bathed it. To prevent this she shook corn meal over it and added a little flour in defiance of the food controller. The dog soon after rolled in the snow in search of relief from the unusual sensation. He then went into the house and lay down near the stove. Soon he got up and began panting and moaning in great distress. The owner then sent for the veterinary surgeon who told her that the pores of the dog's skin had been closed by the paste formed by the flour and that the only way she could save the dog would be by shaving it, and doing it quickly. No doubt your readers have heard of the smart Alex students who, wishing to play a practical joke on a farmer, varnished his cow from the tip of her nose to the end of her tail. The poor animal died with little delay.

Employers of frontier labor deserve credit for reform in provisioning camps. They are all reasonable men and jolly good fellows. Food first; now let it be education of an entertaining character; and above all, let this include sanitation.

A motto of the Reading Camp Association has long been: "Close the bar, open the school, moderate the day's labor." The bar is closed. Let us anticipate the unrest of the frontier toiler and attend to the other two.

The Heating and Plumbing Cost.

A reliable firm has furnished the following estimate for the heating and plumbing material for the building for a logging camp, a plan of which is presented in this article.

Heating material complete	\$3,280.00
Labor for installing	700.00
Range Boiler Shower Heads Comp....	160.00
Jacket Heater 100 Gal.	200.00

Splendid Work of Canadian Forestry Corps

In recent months the Canadian Forestry Corps has greatly extended its co-operation in behalf of the Imperial, French and American forces. Practical appreciation of this assistance has been expressed in several letters received from Higher Command of allied forces. In a letter to Sir Edward Kemp, Canadian Overseas Minister, the Right Hon. Lord Weir, Secretary of States for the Royal Air Force, asks for further assistance from the Canadian Forestry Corps in the construction of airdromes in France and England for the R.A.F. He states in his letter that the men of the Canadian Forestry Corps are so well fitted and equipped for this class of work that a great economy of labor is effected by their employment. One company of them, it has been estimated (approximately 170 strong), is equivalent to at least 600 of the ordinary labor obtained in England.

Sir John Hunter, Administrator of Works and Buildings for the Royal Air Force, has written along similar lines to the Officer Commanding the Canadian Forestry Corps. Testimony to the value of the work being done has also been received from the French army commanders, and also from the Comité Inter allie des Bois de Guerre.

Death of Mr. Thos. J. Rutherford

The passing of Thomas Jackson Rutherford, president of Wm. Rutherford & Sons Co., Ltd., Montreal, will be regretted by very many friends in the lumber trade. He had not been feeling well for some weeks, but the state of his health was not viewed with alarm. It was thought that a short rest at his summer home at Trout Lake near Ste. Agathe, P. Q., would result in restoration to this pristine vigor. The end came quite unexpectedly and he expired on August 14th at his summer home from heart failure. A native of Montreal, during the 59 years of his life, the late Mr. Rutherford spent most of his time in Westmount, where his father, the late William Rutherford, moved in the early sixties. Mr. Rutherford attended the Montreal High School. His business career commenced in 1874, with a junior clerkship with Holmes, Rutherford and Co., the lumber firm, which his father established in 1852. Later he became a partner in the firm, now William Rutherford and Sons Co., Ltd., and some twelve years ago, when his father died became president.

From 1878-1888 Mr. Rutherford served in the Victoria Rifles. He was fond of winter sports, and in his younger days, was known as a good snowshoe runner. He played on the old Montreal lacross team, and was also devoted to curling and fishing.

Mr. Rutherford was a member of the Presbyterian Church, and was actively interested in the hospitals of Montreal.

For many years Mr. Rutherford was a member of the Montreal Board of Trade. In 1894, the deceased was married to Amelia Maud Bowman, of Hamilton. He leaves, besides his wife, three sons and one daughter. Two sons, Lieut. Archibald B. Rutherford, M.M., and Sergt. W. K. Rutherford, are at the front. Both sons left their studies at McGill University, when war was declared, to enlist. The

third son, Forest Rutherford, and the only daughter, Gladys Rutherford, are at home.

Mrs. William Rutherford, of Rosemount ave., Westmount, is the mother of Mr. Rutherford. The brothers are: William Andrew and Stewart Rutherford, of Westmount; Forest Rutherford of New York, and Gordon Rutherford, of Amherstburg, Ontario.

Mr. Henry Wise Passes Suddenly

Henry Wise, of St. Catharines, one of the most prominent and progressive retail lumbermen in Ontario died rather suddenly on August 24th, in Rochester, Minn.; where he had gone for special treatment. Mr. Wise had not been in good health for some months but the news of his sudden demise came as a great shock to his many friends in the trade. The deceased who was sixty-three years of age was well liked and well thought of by his associates in the lumber business. He was the owner of some extensive northern timber limits. Of a quiet, retiring disposition, Mr. Wise nevertheless made many warm friends by his kindly manner, sterling worth and high ideals. He always took a deep interest in the development and welfare of St. Catharines and his departure makes a break in the business life of that city.

Two sons and two daughters survive: They are Rev. Andrew Wise, of Toronto; O. Whitney, St. Catharines; Mrs. Charles Edwards, Toronto, and Miss Olive N., of St. Catharines.

Brompton Co. Makes Fine Showing

Net profits of Brompton Pulp and Paper Company, Limited, after payment of all administration charges and bond interest, amounted to \$511,734 in the half-year ended April 30 last. These figures compare with \$986,496 in the full 12 months ended Oct. 31, 1917, with this difference, that in the case of the 1917 figures provision had been made for the business profits tax. The half-year's report represents about a parity with the last statement for a full year. From the \$511,734 net profit for the six months, \$70,000 is charged off for two quarterly dividend payments on the preferred stock. That would leave a net surplus of \$441,734 available for the common stock, or earnings at the rate of 12.6 per cent. on the common.

Try This on Your Competitor

Do you know what is the biggest thing you can do:

For your Town?

For your Customer?

For your Association?

For your Family?

For Yourself?

It is simply to preach and practice the agreeable policy of CO-OPERATION.

Because:

Because if you do your town will grow and flourish.

If you do your customer will cease to expect long and unsound credits and will cease to have to pay for the dead-beats on your books.

If you do your Association will be strengthened in its chief mission and function.

If you do your family will be more adequately provided for and will have a less grouchy, worried, irritable head.

If you do you will be a bigger asset to your community, more popular with your fellow-men and a happier and more prosperous citizen.

Start preaching the gospel of co-operation by calling on your competitor to-day. Show him this magazine. Tell him that you realize that he is your business partner; that the prices he makes and the practices he adopts affect your business just as much as if he dictated them say our business partner.

Tell him: That competition as you have both understood it in the past is destructive; co-operation is constructive. That the only lumber dealers in the country to-day who are making money are those who are CO-OPERATING.

Making Provisions to Haul Wood

Negotiations have been completed by Hon. G. Howard Ferguson, Minister of Lands, Forests and Mines, for Ontario, with the G.T.R. whereby arrangements will be made to haul wood from Algonquin Park which has been cut by the Government and municipalities. The railway company will take immediate steps to put in the sidings at the park.

It is estimated that it will require 3,500 cars to haul the wood. It is expected that the first shipments, which will be for Government order, will reach public institutions of the Province about the middle of September.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Wanted—Slabs and Edgings

Three to five cars. Apply Box 764, Canada Lumberman, Toronto, Ont. 15-13

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Ties Wanted

Cedar, Oak or Maple. Two to five cars. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Sawdust Wanted

Four or five cars of ordinary Sawmill Sawdust. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Cedar Wanted

Good Eastern Cedar, suitable for boat building. Peterborough Canoe Company, Ltd., Peterborough, Ontario. 15-2

Wanted

Two or more cars 1 in. Cull Basswood, also Mill Run Basswood. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Wanted

100,000 ft. 1 in. and 2 in. Cull Lumber, White or Red Pine, Spruce and Hemlock. Apply, Hamilton Lumber & Coal Co., Limited, Hamilton, Ont. 15-18

Birch Wanted

Wanted to purchase 100,000 feet first class Birch, 1 in. x 8 in. in lengths 6, 8 and 9 feet or multiples thereof. Please give full particulars in first letter. Box 775, Canada Lumberman, Toronto, Ont. 16-19

BIRCH AND BASSWOOD WANTED

We will buy large quantities of 1½ and up, No. 2 Common and Better, log run Birch, with none of the best lumber removed. Also No. 2 C. and B. Basswood. Terms cash. P. O. Box No. 1595, Montreal. 14-17

For Sale-Lumber

Railway Ties

Large quantities first class ties.

JOHN J. GARTSHORE,

17-17 Toronto, Ont.

14-17 90 Pembroke Street, Toronto.

Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

POSITION AS WOODS FOREMAN for licensed log scaler. 15 years' experience and best of references. Address A. W. Grundy, 40 Brock Crescent, Toronto. 17-18

Position Wanted

By a young married man, 33 years of age, of good address and appearance. Fifteen years' experience as an inspector, wishes to make a change. Best of references. Box 760, Canada Lumberman, Toronto, Ont. 14-18

Wanted-Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents.

Band Sawyer

Single cut—for mill operating the year round. Prefer one accustomed to both hard and soft woods. Apply, giving references, to Box 781, Canada Lumberman, Toronto, Ont. 17-17

Experienced Woodsman

Position open for experienced man in woods operations, capable of taking full charge of assistants. Must have good judgment in buying. Only those capable of showing results need apply. State full experience and salary wanted. Box 780, Canada Lumberman, 119 Board of Trade, Montreal. 17-17

Mill Foreman

to take charge of mill in Retail Lumber Yard in large city in Central Ontario. Must have a knowledge of woodworking machinery and capable of pricing all classes of mill work. Preference will be given to man having previous experience in similar capacity. Apply, giving references, to Box 782, Canada Lumberman, Toronto, Ont. 17-17

A Well Established Concern

wants a man with knowledge of timber and pulpwood to take charge of extensive lumbering operations in Canada, including several mills. Must be a strong executive who can successfully handle men. Capacity to analyze figures and conditions is essential, as well as ability to form and carry out plans. Mechanical knowledge or experience is desirable. Must be satisfied to live in small town. If you have the knowledge, ability and confidence to handle this job we want to hear from you. Reply in strict confidence, giving full details of qualifications and experience. Apply Box 778, Canada Lumberman, Toronto, Ont.

Business Chances

For Sale

Building and Machinery of good Sawmill, well equipped with steam feed, canter, loaders, etc. If you want a good mill, address Box 762, Canada Lumberman, Toronto, Ont. 15-t.f.

Planing Mill and Sash Factory For Sale

Fully equipped and in a thriving Village. Power driven from an oil burning engine. Must be sold to close up an estate. For particulars apply to McCullough & Button, Barristers, etc., Stouffville, Ont. 17-t.f.

Agency Wanted

Canadian Hardwood lumber firm would take agency to sell American or any other lumber on a commission basis or other. Now doing wholesale and retail business in the east and Montreal, and having good connection with big buyers, also having large yard and proper shed near railways, can give securities. Apply Box 779, Canada Lumberman, Toronto, Ont. 17-17

Jack Pine—Cut to Order

Will contract and cut to order 500 M ft. or more green Jack Pine for shipment this winter. Make offer; 22c rate to Toronto. Box 784, Canada Lumberman, Toronto, Ont. 17-17

FOR SALE—Planing Mill and Retail Lumber Yard, doing \$225,000 annual business. Complete line of machinery. Established 1 years. Customers all A-1. Owner retiring, ill health. This is a bargain for a good business. Write P. O. Box 596, Buffalo, N.Y. 15-18

Wanted

Timber and Pulpwood Lands; any size tracts in Quebec and the Maritime Provinces.

R. R. BRADLEY, Timber Broker.

Box 5, Ottawa, Ont.

Box 1384, St. John, N.B. 16-19

Mill Plant and Limits For Sale

43 Miles Limits on 31 Mile Lake, Gatineau Valley, containing Basswood, Spruce, Fir, Pine, Cedar, Birch, Maple and Pulpwood.

New Waterous 8 ft. Improved Double Cut Band Mill complete. Steam Alligator, Boats, Sleighs, Wagons, Harness, etc. For further particulars apply to

A. W. STEVENSON,

P. O. Box 2624,

8-t.f. Montreal, Que.

The Probable Market for Spruce Turpentine.

The turpentine of spruce differs considerably from the ordinary commercial pine turpentine and is not suited to all the same commercial uses. It has been developed, however, that toluol, which is much needed now for the manufacture of explosives, can be readily manufactured from spruce turpentine by subjecting it to the combined action of benzol and aluminum chloride. The other product of this reaction, cumol, may also be used to produce benzoic acid, which has hitherto been produced from toluol. This process was reported by French chemists a year or two ago, and has been checked up through experiments by A. S. Wheeler of the University of North Carolina. The experiments are being carried further in an endeavor to improve the commercial yield. If successful they will probably create an active market for spruce turpentine.

Every Precaution to Check Fires

So far this year there have been few forest fires in the province of Ontario, and those that have occurred have been of a very trifling nature. However, the Department of Lands, Forests and Mines, has taken good care to be prepared. For the purpose of coping with any fires that might break out in the bush country, the department has purchased this year 65 canoes, 100 tents, five portable fire pumps and five boats.

BELTING FOR SALE

We have a large quantity of Second-Hand Rubber and Leather Belting in all sizes and plys up to 24 inches in width, which we can sell at interesting prices. Send us your requirements.

Review of Current Trade Conditions

Ontario

There has during the past month been little change in the lumber situation with the exception that building has picked up considerably in most of the larger centres and certain lines of stock are moving a little more freely with dealers than they have for some time past. The house erecting campaign is being taken up seriously by the several municipalities and is supported by the Ontario Government in the way of loans. Building contractors as well as cities and towns are thus looking forward to renewed activity.

One thing noticeable in the trade is that there has been a softening in western prices. This has been brought about by the rather dull condition of the prairie lumber market and the rather unsatisfactory crop reports in various parts of Manitoba, Alberta and Saskatchewan. Naturally the B. C. mills began to look in large measure for more business in the east and on all No. 1 and 2 common, boards, and shiplap, there has been a considerable drop in quotations. The figures for all clear grades such as is suitable for airplane stock are well maintained. B. C. timber in stock sizes is in pretty fair demand and base prices which formerly were \$29 have dropped to \$24. Not only are prices off, so far as the eastern market is concerned, but it is also reported that there is considerable bidding of one firm against the other in the west. Then to add to the interest of the situation a number of Mountain mills have been nosing around down east hoping that by reason of having a more favorable freight rate, to the extent of some ten cents per hundred, they might be able to cut in on the regular business of the coast firms.

Another feature is that regarding the freight situation. The rate from Vancouver to Toronto last spring was 67c per hundred. This was advanced in March to 71.7 and on the 25th of July by order-in-council to 74c. The latest addition of 5c per hundred makes the prevailing charge 79c. The increases in the last few months total 12c per hundred which, on the average will mean an advance of about \$3 on each thousand feet of lumber shipped. Western firms who have offices in the east, have been doing a record business during the past few weeks, more care loads having been sold than for a long while. How long the present competition in boards and timber will continue is problematic, and just at present the east appears the only outlook for B. C. stocks. Prices, however, have not dropped to such an extent as might be supposed, the reduced figure on some lines being about \$3.

The hardwood market continues firm and there is still a scarcity on certain lines of birch and maple. Implement firms and others are buying heavily and having the timber shipped in green as it is believed that even with the increased cost of carriage, money will be saved by this method as everything portends higher values for hardwoods. In regard to hemlock it looks as if the figure will be \$35 a thousand feet before many months elapse and there is not much stock available. There is a steady demand for hemlock and spruce in retail yards. In spruce crating an active requisition has existed for some time, the figure in western Ontario being from \$33 to \$35. About 50 per cent. of the crating that will be required for the next year has been covered. Most firms have taken precautions which they have never done before as it is felt on all sides that many lines of lumber will be scarce in the spring and by reason of the shortage of supply higher prices will prevail. There is a big demand for slabs owing to the acute coal situation—in fact, mill wood of any and every kind is bringing the very highest figure.

The labor situation has not improved and the recent harvesters' trips to the prairie provinces have carried a number of the floating element who looked after the rough work. This has left a dearth of men in many mill yards. Some plants will finish their season's cut this week and others will not run very far into the fall. The outlook for securing help for the camps is not rosy and the camps will be smaller in number and with fewer men to each than they have been. Many large lumber companies, owing to the conditions governing production, operation and distribution will take out only limited supplies of timber this winter. The cut it is predicted will be from 10 to 25 per cent. less than during the winter of 1917-18 when it is estimated that the showing for that period was not more than 75 per cent. of the previous season. While prices are stiffening and likely to advance, those who are in a position to know declare that they will not go as high as some seem to think. Others take a different view of values owing to the real dearth that is bound to exist in certain woods before this time next year. The statement is made and has not

been refuted that there is less lumber in the mill yards of Ontario to-day—manufacture, woodworking industries and retailers—than there has been at any time since the outbreak of the war.

United States

That the lumber industry will enjoy great prosperity for many years after peace is declared is the opinion recently expressed by a leading authority in the United States who goes on to say:—The total standing timber of the United States is 2,600 billion feet, of which 50 per cent, will only become available at much higher prices because of the difficulty of logging due to adverse location. Probably 20 per cent, will never become available. It is too scattered or located in inaccessible place. The average lumber production of the United States is only 30 billion feet annually—our productive capacity 45 billion feet. The discrepancy is caused by labor shortage and manufacturing conditions. It is improbable that our annual production will increase. Every lumbering district, save that west of the Rocky Mountains, has either reached or passed the peak of production.

Despite reports to the contrary, 1918 will show a falling off in production of at least 5 billion feet. At the same time the necessities of war have caused 10 billion feet to be diverted from normal uses—thus creating a total deficiency of 15 billion feet, or half our annual average production. Given three years of war, we face a deficiency of not less than 45 billion feet. Yet, our population increases and the need for new construction and for repairs to old construction is increasing every day. It is obvious that, if we are to return to normal progress again, this deficiency must be overcome during the post-war period.

There is an active requisition for eastern spruce and the outlook is good. Stocks, especially of boards, are very small and the difficulties in obtaining replenishments caused the dealers to maintain a firm stand and to hold out for higher prices. True, receipts are of good sizes, but almost all is for Government uses. Many shippers are still busy on large orders for South Brooklyn construction work, and there are rumors of other large contracts pending one already having been placed for dormitory construction at Quincy, Mass. New England reports indicate that Canadian spruce producers are shipping all the material possible across the border, this having had the effect at some points of under-mining the Government prices. This competition has not, however, extended farther south or to interior points, as the Canadian mills, as well as those in the Adirondacks, are beset with labor and transportation troubles that prevent them from placing much stock in markets where it is needed.

In the hardwood arena the Government and its contractors continue to absorb most of the higher grade stocks and the railroads are buying whatever of them is left. Strictly commercial business is not so brisk, excepting that the calls from vehicle and furniture manufacturers are larger. Altho the box makers as a general rule are well supplied, having stocked up to capacity earlier in the season in expectation of scarcity or transportation troubles, at some points they continue to absorb the common stocks and at others to buy for future delivery. There is a heavy call especially for timbers and for poplar and a fair demand for oak boards. Prices are firm all around, cars none too plentiful, according to most reports and the labor supply is fair for the time being—until cotton picking season starts, in the case of the southern mills. "Firm as a rock" describes the market at eastern distributing centers. Here plenty of business is in sight, but several large orders from the Government and the Allies have taken so much stock from the market that ability to fill commercial requirements is problematical. Shipments have come along faster lately and orders that were outstanding have been filled whenever possible before new business was taken on. Industrial consumers in the East, including box makers, are well stocked, but are eating into their supplies swiftly as a result of record production, and it is evident that they will be in the market as eager buyers before long. As a rule, there is a good run of business from retailers.

In white pine eastern centers hold small stocks and there are plenty of takers from whatever is offered. Prices adhere strongly to lists and some advances are reported. Business at middle western points is no better than can be expected at this time of year, but indications are that fall trade will be large, all crops, excepting corn, in the northern States looking good and beyond danger, and distributors look for a big demand from farmers for rough lumber for shed and other farm construction if crop expectations are realized. But while retail sales are small at present there is a relatively good

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

commercial demand, low grades being sold and shipped as fast as produced, according to some reports.

The general market in hemlock is dull, restrictions on building etc., having their effects, but these are in keeping with stocks, those offered for commercial use being extremely limited, and some centres expect no increase during the fall. Eastern business has dropped off somewhat, suburban yards in New York, for example, having a supply commensurate with their needs, which are small and below normal. Pittsburgh reports, however, that demand is sufficient to absorb all the hemlock that is likely to come on the market for some time. Generally, factory demand is better than the retail, and in view of the short supplies prices retain a strong tone.

Great Britain

The situation of the Imported Hardwood market shows no signs of any improvement. The arrivals of oak, red gum, sap gum, and poplar for private consumption is practically nil. The great difficulty of obtaining licenses, owing to the scarcity of freight accommodation, is the chief cause of the serious decline in shipments. There is no possible chance of any relief from the present situation until affairs become settled. Meanwhile, values continue high, with an ever-increasing tendency owing to the paucity of supplies.

With regard to the Home-Grown Timber market more progress is now being made with regard to felling and transporting the logs from the country to saw mills. Large tracts of woods and coppices have been felled during the past month, and the home-grown timber trade, especially in pit-props, is very busy.

Awaiting the result of the deliberations of the Controller and the committee of the trade that are assisting him with their practical knowledge, the position of matters generally continues unaltered, but with a waiting expectancy in regard to foreshadowed future conditions.

The published statistics in regard to the import of hardwoods during the last few weeks disclose that a steady declining amount of shipments is coming forward, but whether, now imports are in the hands of the Controller, the same publicity in the arrivals is given as heretofore, is a matter of uncertainty. The only item of importance that has figured in recent lists has been plywood from the States, and this material, presumably for Service work, has been landed in fairly large quantities.

With the import side of the trade under the Controller's com-

mand, the business that is possible is confined to transactions in existing stocks, and is necessarily of restricted character. The value of these remaining supplies still advances, and, more than ever holders are disinclined to part with the same, even at the rates that are current. The problem as to how these stocks, limited as they are, will be dealt with in any rationing scheme that may be evolved is a question that closely interests the trade. So negligible are the stocks, however, that there is a possibility perhaps that they may be entirely ignored in any pending arrangement.

Writing to the "Timber Trades Journal" on "home grown timber" a correspondent who signs himself "Amazed" says: It is always easy to criticize management, but going about the country one cannot fail to be struck with the wasteful methods adopted in forcing up production, and however desirable or necessary this may be, some little regard should be paid to the utility of the output, and, in these days of pressure, also to the avoidance of long railway transit.

I have seen many truckloads of stuff which cannot be called timber—small, crooked material, not large enough for pitprops, but might make peggy sticks or clothes props; but why haul such material to large urban centres, with expensive sawing, congesting of railways, to say nothing of the waste of labour?

Of course if a tree is cut, one must take the little with the big wood, but surely it is a waste of energy to pile up charges against mere brushwood, merely to make telling figures. To the practical mind it would appear the undersized portion should be manipulated. It may be smart to have cut so many millions cubic feet of timber, but some regard should be paid to the use for and the cost of the article produced.

I have been through the famous—woods, where there are Canadian fellers and a German internment camp. It is a sight to make angels weep to see the ruthless destruction and clearing of all growing trees, a large proportion of which will not yield even pitprops. The wickedness and folly is past finding words to express. But the question arises, Who is responsible for such waste of energy? A lot is said as to the scarcity of labour, and the need of men for the Army.

Unless the writer's observations have been singularly unfortunate, it would appear that it would be an advantage to stop such cutting and liberate the men for more useful work, or at any rate there should be more efficient management in selecting trees for cutting—trees that will make merchantable timber, or at least pitprops, as even the best selection of trees will yield a quantity of undersized material hardly suitable for cratewood.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Conditions Are Still Quiet at St. John

Trade in long lumber at St. John during the two weeks just past has been of a very meagre nature. The only material moving to the United States has been portable cut stock which will admit selling at a lower price as it is taken from a poorer class of logs than those sawn by city mills. The prices offered by the American brokers will only leave about \$26.00 on cars St. John, Boston rate. The demand for high priced city cut stock is dead and the outlook none too good. The government orders are not heavy and American mills are able to supply all sizes.

The manufacturers at St. John are making preparation to go back to the woods for logs for the coming year. The question of cost is not talked of, as no one can tell what it will be. The only thing known is that it will be more than a year ago.

Hay, oats, groceries, wages, footwear, dry goods are all higher. Labor is scarcer and more inefficient than before, therefore, there can be only one outcome—higher priced material. It is certainly a serious undertaking but the operator must have faith in the future, which is really all he has to work upon, as present quotations do not warrant going back.

Local business in small petty jobs remains unchanged, and no doubt this repair work will continue until fall when it will cease for the winter season. Lath, shingles, etc., best stocks are selling fairly well on the local market but on the foreign markets are very dead, and cannot be disposed of at profitable prices.

Gratifying Increase in Lumber Trade

Abbreviated in form, and with the usual literary features eliminated, the report of the British Columbia forest department for the year 1917 has just been issued from the office of the minister, Hon. T. D. Pattullo. A note by Chief Forester M. A. Granger explains that the abbreviated form of the report and the absence of the

literary features is due to heavy enlistment among the staff, and the pressure of current work, especially in connection with the speeding up of aeroplane spruce production.

The charts and tables embodied in the report, however, show a very satisfactory increase in the extent and value of the lumber industry. The total quantity of timber scaled in 1917 came to 1,647,275,000 feet board measure, as against a production of 1,161,750,000 in the previous year. The value, including transportation within the province, came to \$48,300,469, as compared with \$35,528,000 in 1916, and \$29,150,000 in 1915. An increase of roughly 40 per cent. in the extent and value of the lumber trade is thus shown.

The total revenue from the forests collected in 1917 was \$2,338,333, being an increase of 332,398 over the revenue for 1916.

Damage from forest fires was considerably heavier in 1917 than in 1916, the total loss in 1917 being \$291,457, as compared with \$75,875 in 1916. However, 1917 did not nearly touch the loss of some previous years, notably in 1914, when the loss was valued at \$436,532, or 1912, when it totalled \$313,273.

The railways are listed as being the most frequent causes of forest fires, no fewer than 335 fires being traced to that cause last year. Campers are the next known prolific cause of fires, 209 outbreaks having been traced to that source. In all there were 986 forest fires reported in 1917, most of them being extinguished before any great damage resulted. A sum of \$88,243 was spent in fighting fires of which \$52,906 was spent in the Nelson district. Of the \$291,458 damage caused by forest fires last year, only \$129,124 was damage to forests. The remainder was damage to forest products in course of manufacture, to buildings, railway and camp equipment.

Eastern Outlook for Labor Not Good.

Eastern Maine lumbermen are considerably concerned over the labor situation for the coming season, especially those who are not engaged in war contracts or sub-contracts. The United States em-

Ship Klim anywhere—It will keep sweet and fresh

You may be located so far from rail head that you have difficulty in getting food supplies to the camp in fresh condition. You'll have no trouble whatever with Klim. Klim is pasteurized separated milk in dry powder form. All dry food solids with no water to enable bacteria to multiply and cause souring and spoiling. In hot weather, and in cold, Klim remains sweet and fresh (and no other food shows the same percentage of body-building qualities).

Klim bulks small and is light in weight. A pound makes four quarts. It is easy to pack and economical to ship.

Klim fills all milk needs in camp. Any baked or cooked food requiring milk can be made as tasty and appetizing as though your camp was on a farm where fresh milk could be obtained daily. Klim also makes a refreshing drink and adds the real milk taste to tea, coffee and cocoa.

Your supply house will deliver Klim in 10 lb. tins, 6 to a case.

We Specialize In Camp Requirements

**Ask Us
to Figure**

Before placing your orders, give us an opportunity to quote you on "H. A." Brand goods—all fully guaranteed.

We have made a careful study of the camp requirements of Lumber Companies and our products, for this purpose, are specially selected, specially cured, and specially packed. We understand just what is expected of Camp Supplies—and how many handlings they must withstand before arrival at their destination.

And we ship when we promise to ship—by Refrigerator Car Service, to obviate delay.

Write us. Let us refer you to other Lumber Companies—with regard to the quality of our goods and our service.

Ask us to quote on your next requirements.

**Save
Many Dollars**

H. A. Brand Oleomargarine, the wholesome new butter substitute, will save your Company many hundreds of dollars. In taste and color you cannot distinguish it from butter. It will keep as well as pasteurized Creamery Butter—better than lower grades of butter and it is always uniform in flavor.

We would advise against purchasing lower grades of Oleomargarine as being almost sure to cause dissatisfaction.

Write us direct or get in touch with our nearest branch for quotations.

ployment service, which is taking over the labor supply of the country, is looking out for war industries first, and it looks now as if industries not directly connected with the war will be very short of workers during the coming winter. For this reason, the lumbermen are considering sending a delegation to Washington and putting up to the authorities the needs of the lumber industry in this state. They will say, among other things, that the state of Maine, is largely dependent upon the lumber industry for prosperity and unless this industry has sufficient workers, Maine will lag behind in its taxes, purchases of Liberty bonds and subscriptions to all war work.

Private employment agencies can no longer be depended on for labor, as the government has indicated that their work is to be taken over by Federal agencies. The lumberman cannot go to Boston himself to recruit labor without securing the permission of the Boston representative of the U. S. Employment service, who may refuse permission if war industries are seeking men in Boston at the same time. So there seems to be nothing for the lumbermen to do but to appeal to Washington to change conditions.

The Pulpwood Resources of the Dominion.

The following is the latest semi-official estimate of the pulpwood resources of Canada, but it should be remembered that a considerable portion of the quantities named are so far removed from transportation as not to represent commercial possibilities at present:

	Cords	
Nova Scotia	30,000,000	spruce and balsam.
New Brunswick	33,000,000	spruce and balsam.
Quebec	300,000,000	spruce and balsam.
Ontario	200,000,000	spruce and balsam.
<hr/>		
Total for Eastern Canada	563,000,000	cords.
Prairie provinces	85,000,000	spruce and balsam.
Prairie provinces	100,000,000	poplar.
British Columbia	285,370,000	Sitka spruce western hemlock, balsam, cottonwood.

Total for Western Canada 470,370,000 cords.

Total for all Canada 1,033,370,000 cords.

Seeking New Outlets For Lumber Trade

The closing of the European markets has naturally led the lumber operators in this vicinity of Parrsboro, N.S., to seek new outlets for their trade. One cargo was recently shipped from this port for the Canary Islands, another cargo goes to the Cape Verde Islands and several vessels have loaded in this vicinity for South Africa. These cargoes have all consisted of spruce with in some cases, a small quantity of hemlock. A few cargoes of spruce and hemlock lumber are being exported to the United States, with an occasional small schooner load of hardwood. Some hardwood is still being shipped by rail. Two more cargoes of spruce from the Pacific Coast have just arrived here. The spans that are brought here by rail are distributed by water to the various shipyards along the Nova Scotia coast, except, of course, such as are required here.

The Housing Problem Will Be Studied

It is practically certain that some attention will shortly be given by the Reconstruction Committee of the Dominion Cabinet to the housing problem in Canada. The steady and continuous growth in the cost of building material and labor has to a large extent stopped the construction of dwellings by private owners, and in the cities and communities where large numbers of people are engaged in the making of munitions the shortage of houses is becoming a serious matter.

In considering this question attention is also likely to be given to the problem as it affects agricultural production. The inability of farmers to secure labor is often due to the lack of housing facilities for laboring men and their families. In Great Britain a Government organization provides plans of standard types of houses for dwellers both in the cities and the country, and it is altogether likely that some plan of this kind will have to be undertaken in Canada.

Some time ago the Commission of Conservation recommended co-operation between the Federal and Provincial Governments and the municipalities in dealing with the housing problem. More recently the Ontario Government has announced its intention of loaning two million dollars through the municipalities to people who desire to construct small dwellings, and the plan has been well received. It is believed here that the other Provinces are likely to take similar action and that the Dominion Government will in some way lend its assistance.

New Machine for Track Laying

A large percentage of the cost of laying new track "end on"—that is, where there is not an adjacent parallel track—is incurred in getting the ties and rails up ahead for laying down. The sole purpose of a tracklaying machine is to facilitate the handling of these materials, or to constantly bring them by mechanical means to a point within convenient reach of the men who assemble the parts; for each pair of rails laid removes the repetition of that operation a length farther on from any stationary source of supply in rear. The idea in machine work, therefore, is to carry the materials along as the work advances and keep a stream of ties and rails moving ahead to the end of the last rail laid. Likewise, in taking up and loading a single track, it is equally advantageous if some means can be employed to load the materials as fast as the rails are lifted, panel by panel, from the ties.

In extensive lumbering operations these days railroads are the usual means of transporting the logs to the mill, rather than by floating them down streams or by rafting and tugging them with steamboats, as was done so largely a generation ago. In lumber manufacture, therefore, a large mileage of railroad is all the while being built, to be again pulled up as soon as the woods become logged off. As the track forces on these logging railroads are usually small, the machine laying of track is peculiarly economical and expeditious.

We here illustrate and describe a tracklaying machine devised by Mr. W. R. Bell that is being used extensively on logging railroads

The live conveyor chains for delivery of ties.

in the South, for laying or taking up track, either main, spur or side track. It is manufactured and marketed by the Bell Railway Construction Car Co., of Georgiana, Ala., and is adaptable to the work of laying standard common-carrier railroad track as well as that of logging roads.

In taking up and loading track the reverse operation is worked with the machine. The rails on each side are pulled up by drum and cable, guided by one man to pass over a roller to place on the bunks—there is no hand lifting. The ties are lifted up to the droop and sent ahead over the chain roll to be stacked on the machine by two men.

In laying track the spiking crew works behind the locomotive,

bridle gauges being applied to hold the rails in place as the engine and machine go over them. The car rounds curves by the flexible joints in each of the five sections, making, as it were, 5 flat cars rounding a curve.

The company has discontinued making these cars of steel, it being now too expensive, in the first place, and not necessary. An oak and pine-built car will last practically as long as a steel car. The three sizes above named cover any condition in laying track, or taking up track. In a mountainous country the 3-section machine is used; in a hilly country the 4-section, but in level lands the large capacity is most desirable. The three-section car, made of wood, weighs 11 tons; the four section car, 13 tons, and the five-section car, 15 tons.

As to speed of operation, 20 men have laid track at the rate of over a mile per day; or 15 men, a size of crew that is worked by many mill companies, usually take up 100 rail lengths of track and lay the same down again, doing all of the spiking, in a day of 10 hours.

One View of One Price for All

AN occasional contributor has presented the following for consideration. Of course, they are matters of personal opinion, representing the ideas and conclusions of an individual only and in which he may or may not be in error, there being at least some uncertainty manifest at the moment just what the latest announcements as to price fixing mean and compass or include; but the subject is so far-reaching and comprehensive that they are well worth conspicuous presentation, and are therefore given here succinctly but in their entirety as follows:

"As to Government price fixing and its bearing on the wholesaler and the replenishment of stocks in retail yards, I think that should the promulgation of one price on Yellow Pine lumber by the mill man to all have to any extent the effect of eliminating the wholesaler the result would not doubt in due time be felt by the retailer virtually to the full extent for the reason that 90 per cent. of his purchases in this eastern territory at least are made through the wholesaler. This is based on the fact that the wholesaler has sources of supply other than those manufacturers composing the Southern Pine Emergency Bureau, the Georgia-Florida Emergency Bureau, and the North Carolina Pine Emergency Bureau, which amount to millions of feet in a year, and if the small mill stands out for the Government mill price to the wholesaler (and in my opinion no doubt he will) it will ultimately mean his (the small mill's) elimination and with it the source of supply of wholesalers and consequently at least a great source of the eastern retailers, for the manufacturers of the emergency bureaus will be unable to supply the Government and make replacements to the retailers.

"If this should take place it would be very disastrous, both to the retailer and the wholesaler and to the Government as well, for the Government and its contractors and sub-contractors are dependent on the retailer for emergency requirements of lumber at a moment's notice. If this maximum price fixing by the Government has the effect as above indicated the retailer in that event would in the nature of things no longer be able to furnish emergency requirements the Government would be delayed in its work, factories working on war munitions which require lumber in small quantities from day to day would be unable to obtain same, and the whole theory of one price on all mill shipments would thus fall down."—The Lumber Trade Journal.

LARGEST
BRITISH
IMPORTERS
of Canadian
WOOD
PULP**

Canadian Wood Pulp is in great demand to-day, and every timber man should take advantage of the opportunity to add this profit to his business. A small Kraft Soda Mill is inexpensive, and will handle all the wood waste, slabs, bottoms, tops, etc., around the mill or yard. You can dispose of any quantity at good prices, or on long-term contracts, if desired. The previous sources of supply for the business have been cut off almost entirely, and Canadian business men can reap the benefit with little risk or investment.

EDGINGS

Ontario

The Dominion Shipbuilding Company Ltd., Bathurst St., Toronto, are making additions to their shipbuilding plant to cost \$70,000.

W. J. Hickey, Welland, Ont., recently lost his planing mill and contents by fire. The building was owned by A. X. Griffiths, and the loss is estimated at \$25,000. The owner has not yet decided when he will rebuild.

Ex-Ald. Walter Alford died recently at the age of 74 years at his home in Belleville, after a short illness. He was a well-known contractor and builder and was born in Devonshire, England. He came to Canada in 1870.

The Wm. Conklin Planing Mills, Kingsville, Ont., will start work shortly on a lumber warehouse to cost \$3,000 at Blenheim, Ont. The building will be one storey, 30 x 200, frame construction, concrete foundation, composition roofing.

The Sudbury Housing Association, Limited, has been incorporated with head office at Sudbury, Ont., and a capital stock of \$100,000, to carry on business as builders, contractors, merchants, manufacturers, etc. The provisional directors are L. O'Connor, D. L. Brown, J. N. Morin, W. Dickie and J. A. Mulligan, all of Sudbury.

The Parry Sound Iron Company Ltd., has been incorporated with head office at Owen Sound, Ont., and capital stock of \$2,000,000, to carry on business among other things as manufacturers of lumber, and to deal in timber limits and timber lands. Among those interested are L. G. Day, A. M. James, I. L. Day, E. M. Harrison and M. I. Wright.

J. K. Benner, of the firm of Phillips and Benner, surveyors, of Port Arthur, left recently for the Black Sturgeon limits, taking fifteen men with him, to make a complete survey of the nine hundred miles of pulpwood territory, acting on instructions from the Ontario government. This is the first step, apparently, towards the completion of preliminaries for the erection of the Carrick pulp and paper mills at Port Arthur.

Frank Hillock Ltd., has been incorporated with head office at Toronto, Ont., and capital stock of \$100,000, to carry on business as manufacturers of and dealers in timber, lumber and wood of all kinds, and to manufacture articles in the making of which timber or wood is required or can be utilized, and to take over the business recently carried on by the late Frank Hillock. The incorporators are W. H. Hillock, F. S. Hillock, G. S. Hillock, J. F. Hillock and C. W. Hillock.

Indications at present are that next year there will be a greater shortage of lumber in Ontario than there has been this summer. This is the opinion of the Minister of Lands, Forests and Mines, Hon. G. Howard Ferguson. He states that reports reaching him are that there will be a great shortage of lumbermen at work in the woods next winter. Last winter, he said, gangs which formerly were composed of 100 men only had 60 or 70 men at work. Next winter the number will likely be even lower.

Hon. G. H. Ferguson, Minister of Forests and Mines for Ontario, is calling for tenders which will be received up to Sept. 20, to cut timber on the north and south halves of the township of Penhorwood and north and south halves of the township of Wigle. Tenderers must state the price they are prepared to pay for pine and other timber in addition to the Crown dues of \$2 per thousand feet, b.m.; the amount per tie in addition to the Crown dues of 5c each; the rate per cord for spruce pulpwood in addition to the Crown dues of 40c per cord; the rate for balsam and other pulpwood in addition to the Crown due of 20c; the rate per post for cedar posts in addition to the Crown dues of 1c and the rate for cedar poles in addition to certain Crown dues.

The Shepard & Morse Lumber Company, a corporate company of the State of Maine, have disposed of the business previously operated by them in Gaspé, Quebec, and in Ottawa to the Shepard and Morse Lumber Company, (Canada), which was recently incorporated with head office at Ottawa, and a capital stock of \$2,000,000. The new Canadian organization will conduct operations in Ottawa and Gaspé, fulfilling all the obligations of the Maine company. For many years Shepard & Morse have operated in Canada, and have developed a large business. The officers of the Canadian organization are H. B. Shepard, president, T. H. Shepard, treasurer, and P. C. Walker secretary. Mr. Walker, who is a member of the executive of the Canadian Lumbermen's Association, is widely known to the trade, having been prominently identified with Shepard & Morse Lumber Company for many years.

Eastern Canada

Work has started on the erection of a shingle mill by Ernest Skaling, Kempt, N. S.

Lumber piles in the yards of J. and W. Duncan, Ltd., lumber dealers, Ontario Street East, Montreal, were severely damaged by fire on August 19.

In connection with an item which appeared in these columns recently, stating that the sawmill belonging to D. J. Buckley, Newcastle, N. B., was

destroyed by fire, we are pleased to state that only a portion of the carrier to the waste burner was damaged and the mill escaped.

An old saw mill at Marysville, N.B., belonging to the Nashwaak Pulp and Paper Co., was burned recently. It had been unused for years. The Nashwaak Co. also lost a quantity of driving supplies.

La Manufacture de Boites de St. Evariste, Ltd., has been formed with a capital stock of \$20,000, to carry on the business of box makers, dealers in lumber, and the manufacture of any objects in wood.

The Miramichi Lumber Co., Chatham, N.B., ceased to ship rossed wood on July 26, due to transportation troubles. The mill will continue to run as usual, there being plenty of room for a large amount of blocks on the wharf.

The Makamic Pulp & Lumber Co., Ltd., has been formed, to manufacture lumber and its products. The capital is \$99,000, and the principal place of business is Quebec. Messrs. J. E. Tobin of Montreal and William H. Mitchell of Lyster Station, P.Q., are interested.

The Empire Paper Box Company Ltd., has been incorporated with head office at Montreal, P.Q., and capital stock of \$20,000, to carry on business as manufacturers and dealers in wood and lumber of all kinds, to manufacture boxes, barrels and cases made from wood.

A federal charter has been granted to the Eastern Pulp Company of Canada Ltd., with capital stock of \$500,000 and head office at Montreal. The company is empowered to import, export, manufacture and deal in pulp, paper, cardboard and wood products of all kinds. The incorporators include G. A. Coughlin, R. G. Bush, G. R. Drennan, M. J. O'Brien and C. A. Laurendeau, all of Montreal.

At Fredericton and Newcastle out of the one hundred and forty candidates who stood the examinations only about thirty qualified. Between thirty and forty forest rangers are needed, and it will not be possible to supply these from the number of successful candidates, as some of those who passed the examinations do not wish to devote the whole twelve months of the year to the work. In order to get the required number of qualified men it has been decided by the board to raise the age limit from fifty to fifty-five years and to hold another examination in the near future, probably at Campbellton.

Western Canada

Cooke & Cox, lumbermen, Moose Jaw, Sask., have been registered.

The Imperial Elevator & Lumber Company Ltd., have sold their plant at Rosenfeld, Man., to A. A. Thiessen.

The Miami Lumber Co., incorporated in the State of Michigan, is now registered to do business in British Columbia, capital \$300,000, head office Victoria.

The Foundation Co. Ltd., Victoria, B.C., with head office at New York, N.Y., have plans in progress for extension to their shipyards. The yards will be extended from Point Hope to Point Ellice.

M. J. O'Brien, the well-known railroad and lumber man has been elected to the Board of Directors of the Whalen Pulp & Paper Co. of Vancouver. One of the principal markets of the Whalen mills is Japan, where a shortage of pulp exists, according to the Canadian Trade Commissioner.

Sealed tenders are being received by the Minister of Lands for B. C., until the 12th day of September, 1918, for the purchase of License X1375, to cut 2,479,000 feet of cedar and spruce on the Fractional N. W., ¼ of Lot 5954, near Urling, Cariboo District. Three years will be allowed for the removal of the timber.

The U. G. G. Sawmills Ltd., have been incorporated with head office at Hutton, B. C., and capital stock of \$1,000,000, to carry on business as lumber merchants, sawmill proprietors, timber growers, and to import, export and deal in timber and wood of all kinds and to take over certain timber licenses and timber limits owned by the United Grain Growers' Limited in the province of British Columbia.

Sealed tenders are being received by the Minister of Lands for B. C. until the 4th day of October, 1918, for the purchase of License X1347, to cut 12,936,000 feet of fir, cedar, hemlock and white pine on area situated on Haslam Lake, New Westminster District. Five years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B. C.

Mrs. J. A. Christie, wife of J. A. Christie, lumberman, Vancouver, passed away recently. She was married in 1870 to Mr. Christie, who was at that time engaged in lumbering activities in the Ottawa Valley. With her husband she pioneered in the West, moving to Brandon in the early days and later to Vancouver. Mr. Christie joined in the early rush to the Klondike and upon his return to Vancouver moved his family to Winnipeg, where they remained for a number of years.

Owing to the partial crop failure on the prairies the Mountain Lumber Manufacturers' Association, in conference lately in Calgary, decided they must plan to increase their business in Eastern Canada and the Eastern States. One difficulty which confronts them in competing with eastern firms is the increased freight rates. No airplane lumber is now being manufactured in the mountains, but the government is being asked to investigate to see whether there is not lumber that they could utilize for government work. The labor situation has also become acute. Logging has been stopped and the mills are employed in sawing up the cut.

Western Retail Lumbermen's Association

WINNIPEG - CANADA

N. G. Neill, Sec.-Treas.

Selling Value of Lumber Not High

The Southern Pine Association has issued a timely and instructive booklet entitled "Is Lumber High or Money Cheap?" which is divided into four sections showing: (1) That there has been no profiteering in the Southern pine industry; (2) comparison of costs and realization of lumber from April, 1917, to April, 1918, shown in their percentage relation; (3) that stumpage values have not been favorably affected by war conditions; and (4) comparison of lumber values with those of other commodities for the periods comprised by the years 1913 and 1917 and the first three months of 1918.

The first effort of the booklet is a refutation of the Federal Trade Commission's statement that Southern pine manufacturers had been getting an unfairly high profit, this refutation being accomplished very thoroughly and conclusively by means of an actual analysis of the costs and profits of twenty companies manufacturing two and one-half billion feet of lumber annually. This analysis brings to light, among

Know Your Business

To succeed in any line a man must know all about the Merchandise he is selling and be able to tell his customers what material is best suited to their needs.

The average lumber dealer has not been able to do this and the result is a steady decline in the use of lumber and an increase in the use of substitutes.

Do you know your line? If you do, give your customers the benefit of your knowledge, if you do not get busy and find out about it.

other things, the fact that the cost of production increased from \$15.574 in April, 1917, to \$23.588 in April, 1918, an increase of more than fifty per cent without a corresponding increase in the realization value.

Another fact developed in the booklet is that stumpage values, in comparison with other commodities, have declined thirty-three and one-third per cent since 1913, since the purchasing power of stumpage, measured in commodity values, is only sixty-six and two-thirds per cent of what it was then.

A similar fact is disclosed with reference to lumber itself, emphasized by a comparison between the value of lumber and that of a number of other representative commodities. For instance, in 1913 one thousand feet of lumber purchased 23.4 bushels of wheat as against 12.4 bushels in 1917; 35 bushels of corn in 1913 as against 16.3 bushels in 1917; 3,136 pounds of pig iron in 1913 against 1,613 pounds in 1917; 190 pounds of cotton in 1913 against 133 pounds in 1917; and numerous other similar instances. The thought intended to be conveyed is that lumber is not high in price, and that there has been no profiteering. The selling value of lumber as expressed in money, it is true, shows an increase of thirty-nine per cent; but expressed in terms of its true value, its exchange value with other commodities, it has really declined 43.7 per cent.

British Timber Controller Visits West

Col. Beckett, timber controller for Great Britain, with Lieut. Jean Hollande of the French army, who said his country is interested in the securing of all kinds of timber, are in Vancouver, having spent a few days on Vancouver Island.

The British controller, who has been investigating the United States timber situation, preferred not to be interviewed. He has business in Vancouver with Major Taylor of the Imperial Munition Board.

Lieut. Hollande, who like Col. Beckett is a war veteran bearing the wounded stripe, registered from "Paris and New York." He is gathering data on available timber supplies on the western coast.

The Busy Man's Creed

"I believe in the stuff I'm handing out, in the firm I'm working for and in my ability to get results. I believe that honest stuff can be passed out to honest men by honest methods. I believe in working not weeping; in boosting not knocking; and in the pleasure of my job. I believe a man gets what he goes after, and that one deed done to day is worth two deeds to-morrow and that no man is down and out till he has lost faith in himself. I believe there is something doing somewhere for every man ready to do it. I believe I am ready—RIGHT NOW!"

All "Reliance" Chains are provided with a wide-wearing shoe on one side of the link.

Note also the double-keyed pin head to prevent the pin from turning.

F-4 (B. & F.)

"Reliance" Chain

With F-4 (or B. & F.) Attachments; the best thing for Saw Dust and Light Refuse Conveyers. Used also for Lumber Conveyers.

Jeffrey
"Hercules"
Chain

The Jeffrey Square Shank Pin Construction eliminates all rocking motion in the side bar.

Jeffrey Square Shank Pin Construction

The hard smooth steel pins with the square shanks fit into perfectly square holes. The bearing surface is the full width of the pin. We are the originators of this type of chain and have been building and improving it for 25 years.

F-2 Attachment

Jeffrey Detachable Chain

The type most generally used for Chain Drives. With F-2 Attachments to carry flights, Detachable Chains make good saw dust Conveyers.

"Reliance" Malleable Drag Chain

FOR SAW DUST AND REFUSE CONVEYERS

JEFFREY CHAINS

For Conveyor Service in Handling Logs, Lumber, Mill Refuse, Slabs, &c.

Not just chains; but chains that combine all the qualities and features demanded where greatest production or capacity is to be obtained.

Our 36 years of Chain building experience and knowledge of the Lumber Industry's needs makes the recommendations of Jeffrey Engineers valuable to you.

We ask the opportunity to prove our claims to you. Write for Catalog.

Long Spur

K-5 Attachment

Long Link Coil Chain

For Log Hauls with S-1 1/2 Spurs
For Heavy or Light Refuse and Slab Conveyers, use U Bolt or K-5 Attachments to carry flights or scrapers.

A Continuous Run

means maximum production, and steady profit. A reliable belting is the essential of continuous and regular power.

You can be sure of even running, steady motion and regular power conveyance with

D. K. McLaren's Leather Belting

It has tremendous strength, toughness and resistance to stretching. The tension may be of the severest but D. K. McLaren's Belting has proved it is equal to the strain where others have failed, when machinery is running at high pressure.

Engineers and machinists place a particular dependence on our belting. They say that it is remarkably free from skidding.

Try a McLaren Leather Belt on your wheels and you will find that it lives up to our claim that it is the best on the market.

"Suggestions for the Lumberman"

The above is the title of a booklet which we are trying to put into the hands of every Lumberman and Mill Owner in Canada. The suggestions contained therein are live, practical and of proven worth. There is something of value in this booklet for every Lumberman, no matter what the size of his camp, large or small.

The Mill Man also will find his time well spent by a perusal of this Booklet, as there are suggestions therein by means of which he can reduce his operating expenses and increase his profits.

WE WANT YOU TO HAVE A COPY

If you have not received yours yet, drop us a card. We will gladly place this Booklet also in the hands of each one of your foremen if you wish. Just say how many copies you want, if you prefer to distribute them yourself, or send us their names, and we will mail them direct.

Marsh Engineering Works, Limited Established 1846 **Belleville, Ontario**

GOODHUE BELTING

For

Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

16/4	105.00	90.50	55.00	35.00

The quantity of soft maple produced in Ontario is small and it is generally sold on a log run basis, the locality governing the prices.

Little Giant

FOR PROMPT DELIVERIES

USE KEROSENE.

THE DUNTLEY Hydro - Pneumatic Gas Generator is an exclusive feature of Little Giant Motor Trucks. With this device the Little Giant Truck may be operated on kerosene or gasoline, at a saving in fuel cost of over 50 per cent, with a total absence of carbon smoke or odor.

It renders invaluable service and will place you in line for bigger business. It will expedite your deliveries and do it at a remarkably low cost of fuel consumption.

Capacity is from one to five tons. One-year guarantee with every Little Giant Motor Truck.

Further particulars of what the Little Giant can accomplish will be gladly sent on request.

Ring Oiling

WHY

Bond Hangers

Eliminate
Hot Bearings

Are you considering the purchase of Hangers for your new factory?

Perhaps you do not realize the necessity of buying hangers that will eliminate hot bearings, or the trouble they will cause in a hanger? If a bearing happened to become hot in a hanger holding six or more machines, and they all stand idle while the shop mechanic fools around trying to fix it, you'd soon realize what inefficiency and expense this is.

The Ring-oiling device on Bond Hangers supplies a constant flow of lubricant on the full surface of the shaft and bearings, which keeps them cool when running at high speed.

Get our catalog containing full details before you buy.

Canadian Bond Hanger & Coupling Co.

LIMITED

ALEXANDRIA, ONTARIO

Size	Fuel Consumed
B.H.P.	at Full Load

BURNOIL ENGINES

Operate Perfectly on Cheap Fuel Oils

No carburetor, batteries or magneto.

No preheating, blow torch or hot surface.

Simple, economical, sturdy. This engine can be run indefinitely at slow speed and then immediately speeded up to maximum power. Just the type needed for continuous towing, rafting and general manoeuvring. Starts instantly.

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, breakdowns or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims.

How About Operators?

Prospective users of wireless usually ask us: "But what about operators? Aren't they hard to get?"

The answer is: "Not if you use C & W apparatus."

The old style sets, with their high voltage, low factor of safety and numerous critical adjustments, could be operated only by an expert, with a specialized training;—and such men are hard to get.

But C & W sets have a voltage of only 200 volts as against from 8,000 to 20,000 volts in the old style sets, a factor of safety of ten as against one and a half, and no critical adjustments. These factors make a set so simple, rugged, reliable and easy to operate that anyone who knows the code can operate C & W sets and keep them in operation—and learning the code is a simple matter, taking from four to six weeks. If C & W sets are installed in your forests, your wardens can operate them after a short training.

No C & W set has ever broken down in service; the initial cost of a C & W set is about one-quarter that of other sets on the market; the upkeep costs are almost negligible; and you can always get operators for C & W sets among your own men.

May we help you solve your problem? Details and expert advice from our engineers upon request.

The Babbitt Metal that's at the Front in Efficiency and Economy

HARRIS HEAVY PRESSURE

THE ARISTOCRAT OF BABBITT METALS**SHIVES LUMBER CO., LTD., Campbellton, N.B.,
Canada**Messrs. The Canada Metal Co., Ltd.,
Toronto.

Dear Sirs:

Replying to your inquiry regarding our experience with Harris Heavy Pressure Metal, would say we have been using this metal for about five years in main bearings and cranks of Wickes' gangs and steam engines, also edgers, etc., in place of more expensive metals that we formerly used for these bearings.

We are pleased to be able to say that the Harris Heavy Pressure has in every case given us good satisfaction, being a nice metal to pour without shrinking or cracking, and wearing well. So long as this metal retains its present standard of excellence we will have no hesitation in using it for the most severe conditions we have for babbitt metal.

Yours

JOHN M. MACLEAN,
Superintendent.**WRITE FOR COMPLETE LIST OF BABBITT METALS****THE CANADA METAL COMPANY, Limited**Head Office and Factory **TORONTO** Fraser Avenue

GRATON & KNIGHT

Standardized Series LEATHER BELTING

Tanned by us for belting use

GRATON
AND
KNIGHT

HOLDING THE LINE

YOU honour the Turbine as a Field Marshal, the Engine and the Generator as Generals. But, how about Private Belt, without shoulder straps or collar emblems, grimly holding the line? Too often you give him consideration only when, under cruel strain, he breaks.

The great need is to fill the line with those Privates that stand the strain better than others. A guiding rule, easy to remember, is that the demand for Graton & Knight Standardized Series Leather Belting is greater than that for any other belting in the world. It started from nothing and has grown steadily and naturally.

There are many technical reasons for this preference, but the big reason is not technical. It is simply repeated experience: Mr. A. buys a Graton & Knight

Belt and observes that it gives all-round service and long wear. He doesn't always know whether to credit these qualities to the materials or the construction. What he does know is that the belt **works right**—and that is enough.

In our book, "Standardized Leather Belting," we explain scientifically why Graton & Knight Standardized Leather Belts are enlisted to hold the power line in so preponderant a number of American factories. Write for a copy.

ATKINS

ALWAYS AHEAD!

The most advanced improvements in Saw manufacture have placed us far ahead in the manufacture of Saws for all uses.

Our Band and Circular Saws are worthy examples. They cut more timber—do it with less power and require less repair to be kept in perfect condition.

Economy in mill operation has proved their value. Put them through competitive tests with other Saws.

The Sterling quality of

Atkins Sterling Steel Saws

will overcome your difficulties.

Mills Like These Are Using— **WATEROUS MACHINERY**

You will find Waterous Equipment in those Canadian Mills where fast and accurate cutting are essentials.

Waterous Sawmill Machinery is being used because it is built for that kind of work—it is the result of more than 50 years' intimate knowledge of Canadian sawmilling conditions. The men who use Waterous Machinery know that it will give the service they expect.

Our reputation for "knowing how" is a guarantee that every piece of equipment you buy from our shops is the last word as regards Sawmill machinery. You can bank on the results it will give you.

There is a Waterous equipped mill in your neighborhood—we will be glad to tell you where. Watch our machines at work and ask the operator and the owners what they think of them—we will abide by what they tell you.

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 90c per lb.; West of Fort William, \$1.00, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00

worth of mixed metal
sold annually.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS.—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS.—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

For maps and full information regarding Ontario, apply to

HON. G. HOWARD FERGUSON,

Minister of Lands, Forests and Mines.

Yes, Mr. Dealer, that's just where British Columbia Red Cedar Shingles are going.

The Trademark

Last year the demand for this time-tried, thoroughly tested roofing product increased to such an extent that an output 20 per cent. greater than for the previous year was marketed and we're still going strong.

This year the Publicity Section of the Shingle Agency of B. C. is sending out a trademarked No. 1 shingle. This is being backed up by an extensive Dominion advertising campaign, supported by

literature for the farmer, the contractor, the builder—as well as the literature for the dealer. Enquiries from all parts of Canada are coming as a result of this campaign.

Remember—You don't have to prove the merits of our shingles to your customer—they've used them—their fathers used them—and the roofs they laid are still giving good service.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 38 Toronto, September 15, 1918 No. 18

Why Uniform Terms of Sale Should Be Adopted By All

A remarkable amount of work has been accomplished by the Ontario Retail Lumber Dealers' Association during the past eight months. This was revealed in no unmistakable manner in the comprehensive reports which were presented at the recent representative gathering held in Toronto. If so much can be done in a comparatively short space of time, the question naturally arises, what may not a body of this influential and aggressive character accomplish by means of co-operation within the next few years? The growth of the Association has been gratifying and it is expected by the end of the next six months that the majority of all the progressive yard men in the province will be active members of an organization which is giving such a splendid account of itself. A number of timely and important resolutions were carried and a busy programme mapped out for the officers and executive during the coming months.

One of the chief topics that engaged the attention of the delegates was the adoption of uniform terms of sale throughout the province. After a lively discussion the proposal to place the retail lumber business on practically a cash basis was carried. The average yard man, owing to the evolution of things created by the war, has to render greater service and carry more varied and extensive stocks than ever. Frequently he has to hold the lumber for months and then sell it in small lots, giving prompt delivery and making a profit that is not nearly as large as that enjoyed in many other lines of business which are conducted on the cash system. If there is one branch of trade that is making progress, it is cash. Department stores long ago gave the new order of things stability and recognition, and other businesses have followed. Coal merchants adopted the policy that coal is cash. They eliminated the credit feature with satisfaction to themselves and their customers. Other merchants have formed in line, and among the last to get in step is the retail lumber dealer. He has everything to gain and nothing to lose by doing business on a cash basis. Naturally the change is the most difficult at the introduction,

but, by the united action which has been taken there will be the co-operative effect of the association.

With this prestige and support no yard man should hesitate in inaugurating settlement by the spot cash method, with everybody except builders and contractors of approved financial rating who are to liquidate their bills on the 10th of each month. The charging of interest on all accounts over thirty days' duration will also help usher in the new state of things. As one member pointed out, if a yardman did not start the cash business now he might as well throw up his hands in favor of a credit game for ever. The farmers, who are leading customers of the majority of yards, never had so much ready coin or secured such high prices for their products as they do at the present time.

There is a time for everything, and it would appear that the particular hour to change the old order, abolish discount and special concessions, convert long standing and open accounts into ready available assets and place the lumber business on a rock foundation is right now. This is the psychological moment for the cash system. The door of opportunity is open and the dealer who fails to get in line and keep pace with the onward march of his brethren, will realize in the days to come the sad refrain "It might have been." A better slogan at this juncture in connection with the retail lumber activities and the question of uniform cash terms is "do it now."

* * *

Public Spirit in the Interest of Forest Conservation

The public spirited citizen is not dead; he lives today as much as ever in all worth-while communities. The man of vision can foresee what the fate of Canada would be were the land stripped of its splendid and varied timber wealth. The ruthless hand of the speculator and the despoiler would rob the country of too many of its most beautiful woodland lots, little caring what was left to posterity.

History was made the other day in Waterloo County when some forty acres of sylvan property at the confluence of the Grand and Conestogo Rivers was handed over by Walter J. Snider to the Ontario Government. The object of this generous benefaction is to further the policy of conservation and re-forestation throughout Canada. The land has been in possession of the Snider family since 1850 and is covered in majestic forest trees. Mr. Snider desires that the splendid timber could be assured in perpetuity and, on this being intimated to the provincial authorities, the donor had great satisfaction in handing over the lots to the Ontario Government. Mr. Snider will receive much praise for his liberal action in the gift to the people of Ontario of the magnificent woodland, and, at a public gathering, Hon. Finlay Macdormid, Minister of Public Works, praised the enterprise of Mr. Snider and asserted that it was a worthy example for other citizens to emulate. Mr. Snider said he was alarmed at the cutting down of the woodland in his district and added that he had made up his mind that his bush should not see the axe of the lumbermen, and he was only too glad to do something along the line of forest conservation.

It was suggested that instruction should be given in the schools in the matter of conserving the timber wealth of the province. Later the local authorities and representatives of the Ontario Government motored to Cressman's wood, a beauty spot at the Grand River near the village of Doon. It is stated that public spirit of residents of that district, in competition with portable sawmill men, raised a sufficient sum of money to purchase this attractive piece of real estate and preserve it for the use of the people for all time. The property consists of sixty acres overlooking the Grand River. It contains more than twenty varieties of well-known Canadian trees and it is reported there are more kinds of wood represented in this sylvan section than in any other of the same area in Canada. Many enterprising gentlemen of Waterloo were instrumental in preserving this lovely bit of mother earth for the county, which demonstrates that human nature possesses an aesthetic side which not infrequently outweighs the purely material in certain relations of life. The home instinct, the neighborhood love and an innate adoration of local scenes, engraven on the memory by youthful or family associations, will never die. The flux of time only serves to make such impressions stronger and deeper.

Ontario Retail Lumber Dealers Assemble

Encouraging Reports Presented and Progressive Steps Taken on Many Important Trade Matters—Service and Co-operation Emphasized

Representative and enthusiastic in every particular was the special meeting of the Ontario Retail Lumber Dealers' Association, held in Toronto on September 3rd. The gathering, numbering about 150, took the greatest interest in the proceedings, which dealt with practical problems connected with every phase of the trade and its expansion.

Changed conditions have to be met by new and improved methods, and, owing to the war, it has been necessary to adjust certain matters to accord with the spirit and service of the present period. These questions are most fully set forth in the reports of the different officers and committees and in the important resolutions which were adopted. That the Association, which was organized less than a year ago, has acquired such a flourishing membership and taken up so many leading issues was favorably commented upon by all. It was felt that the future of the organization was bright with promise of greater achievement and even more efficient work. The officers have been most energetic and diligent in their zeal for the welfare and up-

and the city of Toronto for the evening spectacle. At the noon-day luncheon the officers of the Ontario Retail Lumber Dealers' Association had the pleasure of sitting around the table in the Administration Building with the Directors of the National Exhibition.

The various reports presented will be found comprehensive and edifying and well worth perusing. They contain a mint of information for every member of the trade and more particularly the retail dealer. President Thos. Patterson, of Hamilton, ably presided, and "calling the boys to order" announced that he was pleased to see such a large attendance from all parts of Ontario. He said they had much business to attend to and he trusted the sessions would be pleasant and instructive.

After referring briefly to the rapid growth of the membership and the promising outlook for the coming year, Mr. Patterson proceeded to read his annual report, which was as follows:—

President Patterson's Able Address

As President of the Ontario Retail Lumber Dealers' Association, it falls to my lot to deliver an address to you, and in casting about for suitable matters to discuss, I have felt that my introductory remarks should include some reference to the great war, and all that it means to us as individuals, as Canadians, and as members of one of the most important industries and trades in the country.

Our young life, as an association, has been lived in an environment of thoughts and deeds connected with the war. During the year 1918 we have passed through a most anxious time; through days and weeks when it seemed to be doubtful whether all the sacrifices, which had been made during nearly four years of war might not be in vain. With stout hearts we believed in the righteousness of the allied cause and knew that in the end success would be achieved, but there was so much uncertainty about the length of the trial and the extent of the adversities through which we would have to pass that the morale of the people at home has been severely tried. During these early months of 1918 our Association was in its cradle, so to speak, but those who were actively working for its success felt, just as surely as we have all felt in connection with the war, that the cause was right and the end certain, so long as we lived up truly to our ideals and worked with a will for the attainment of our goal.

To-day that goal is in sight, and I believe I can with confidence also say that the other great goal is in sight, the goal of the delivery of mankind from the evil domination of the Hun. We have all been thrilled beyond measure during July and August by the wonderful progress of the allied armies. The flood gates of hope have, at last, been opened, after long years of trial, and we see to-day the undoubted beginning of the end. There may be still untold trials to be endured, even great disappointments to be suffered before the day of victory dawns, but we have passed beyond the crest of the hill. We have seen the promised land of peace, and there is dawning now upon mankind a day of great happiness, when no man shall ever dare again to make the damnable assertion that "Might is right."

I believe, and I feel that everyone in this room to-day believes with me, that we can now look forward before many months to a return of peace, and this being so, we have, as an association, many matters to talk over. We are still young enough as an association to look back upon the days before there was any co-operation between the retail lumber dealers of Ontario. Even less than a year ago to-day our Association existed only in the minds of a few enthusiasts whose experience had convinced them that co-operation among the members of the trade was badly needed, and who believed that the thing could be done, if only the right men could be interested at the outset. From that day until the actual birth of the Association on December 21st, 1917, it was an uphill fight. While many dealers believed in the necessity for an organization such as ours, only a few could be found who had sufficient faith in their fellow retailers to believe that it could be put into effect.

I do not say this by way of belittling the ideas of those who held off at first, or even of those who have still to come in, but by way of affording a striking contrast between that day and this. The most sanguine of us, who met in this room on December 21st, 1917, could not have pictured such a gathering as this, brought about in the short space of less than nine months.

Gentlemen, we have accomplished something to be proud of. Yet, we must not allow the idea to get abroad that we have, by any means, accomplished sufficient to entitle us to rest upon our oars. The

Thomas Patterson, Hamilton,
President of the Association, who presided at
the different sessions.

lift of the Association. This spirit is reflected in the very gratifying reports and the action taken on a number of outstanding problems.

The discussions were animated, cheerful and profitable. The business was put through with despatch, and every delegate expressed himself as thoroughly satisfied with the amount of information gathered, the numerous helpful suggestions presented, and the enlarged viewpoints secured on merchandising, distribution and manufacturing problems so far as the lumber industry is concerned.

The sessions were held in the Assembly room of the Board of Trade, Royal Bank Building, Toronto, and every seat was occupied. As each delegate arrived he registered and was presented by Secretary Boulton with a card for the luncheon which was tendered the visitors by the Toronto Retail Lumber Dealers' Association, and with a dinner ticket to the social function which was carried out at the Royal Canadian Yacht Club. There the members of the Retail Lumber Dealers' Association of Toronto, the affair being one of the most successful and enjoyable ever conducted.

The second day of the proceedings was devoted to pleasure, and all the delegates remained over to attend the great Canadian National Exhibition. Every department of the mammoth institution was inspected, and there was a large tent on the ground which was the headquarters of the visitors during the afternoon and evening. There they left their parcels, met for conversation or letter writing or used as a rest room when they desired a few minutes respite from sightseeing. A reserved seat section of the grandstand was placed at the disposal of the lumbermen who were the guests of the Exhibition directors

goal of accomplishment which lies before our Association will never be reached. It will recede ever as it is approached, and our field of usefulness must ever be enlarged. It is one of the fundamental conditions, upon which association work, like all human endeavor, depends for its success, that the achievements of to-day are never complete in themselves, but are only stepping stones to further progress and that if we content ourselves with what we may have done, we cannot even remain where we stand, but must inevitably fall back. Therefore, I want every retailer here to-day to carry home with him a strong personal conviction that the future still lies before us, and that it depends upon us individually whether we shall make of it all that it should be, both to ourselves and to our Association. In the reports and addresses which you will hear to-day, you will learn in detail what has been accomplished during the past nine months.

Bore of the Brunt of Organization

The successes we have had, have come from wholehearted and unselfish work, gladly performed by those who have borne the brunt of the work of organization. The successes of the future will be many times greater than those of the past, and it belongs individually to each one of us to apply those successes to his own personal use, and by so doing, automatically to render the Association more valuable to all the other members. An Association like ours is, in name, a great co-operative work based upon unselfishness and a desire to do the other fellow justice, yet it has this peculiarity, that it is not possible to escape personal gain in a far greater measure even than the advantages which we confer upon our fellows. Looking at it from this point of view your membership has its selfish side, but there is still this other fact to be borne in mind, that it is impossible for any member, however selfish he may want to be, to hug to his own bosom and retain for his own personal use the benefits which he secures from membership.

These benefits spread themselves throughout the trade and have brought into existence even to-day a far greater friendliness of spirit and bigger hearted goodwill between competitors than could have been brought about in a thousand years by any other means.

Let us say something now about our achievements in detail. Let us gather together and tell one another what good fellows we are, and gloat over what we have been able to do, for I think we are justified in so doing.

In the first place, less than nine months ago there was no Association, and there were only a handful of dealers who thought it would be worth while to try the experiment of organizing. To-day the experiment has been worked out, and we have an Association made up of one hundred and thirty-two members, including in its ranks a goodly majority of the progressive dealers in the province. That in itself is a gratifying result. It means that one hundred and thirty-two dealers have been men enough to come forward and support an honest attempt to put the ideals of co-operation into effect, and it means that for its future work the Association has a foundation firmly built upon the rock of confidence among men who are farsighted enough to attempt to realize their ideals.

The Big Men Behind the Retailers

As to the things that we have already been able to accomplish, there is a goodly list of them, but they will be referred to more properly by our Secretary in his report. I will content myself here with the statement that, while we have had an uphill fight, it has been a fight full of interest for those who took part in it, because, almost from the very first, we found that the big men were behind us, and that success could be won undoubtedly by perseverance. To-day, the result is, that before our Association is a year old, it is a going concern, and a factor for good among the members of the trade, the importance of which cannot be overestimated. We have still a few months of 1918 before us, and I am confident that the conclusion of the year will find us more firmly established still.

I have dealt so far with matters that are intimately associated with the growth of our Association, and with the state of affairs from an Association and a trade point of view, which we find surrounding our industry as a result of the war. This has all been more or less by way of introduction and the remarks I have still to make will be of a different type. I propose to deal briefly with two problems: First, a review of the changes that have taken place in the retail lumber industry during the past thirty years, and second, an account of the recent awakening to new ideas in our industry. I believe these are matters that you will be interested in, and that you will bear with me while I indulge in a few reminiscences and draw a few conclusions from them.

In the early days the retail lumber business was a very different thing from what it is to-day. To put it succinctly, it was an industry of the wilderness. The retail yard of those days was not of the proportions of the retail yard of to-day. It carried a very small stock, and this stock was composed practically of one kind of wood. Moreover, it was usually an adjunct of a sawmill located quite near by. Sawmills in those days were not the great plants that they are to-day.

They were small, and scattered throughout the country, and the retail yard owner did not have to go far for his supply.

With the development of the country, the mills removed back from the centres of population in order to keep in touch with the forests, and then lumber had to be shipped into the retail yard by car or boat. When the yard owner had to go further afield for his stock, he found, at the same time, that his range of choice was widened, and, as a natural development, with the increasing settlement of the country, the demand for a wider variety of woods strengthened and the retailer found it necessary to enlarge his range.

This was the natural sequence of events and it meant that the retail yards had to carry larger stocks all the time. What this involved to the dealer will be readily understood by you. It took longer to receive lumber from the points of manufacture. More grades came into use at the same time, as the wider variety of kinds of wood became available, and the retail yard had to cater to the new requirements in order to keep up to date. From the dealer's point of view this meant two very important things. It meant, first of all, an increased investment, because it took more capital to carry the larger stocks; and in the second place, it meant an increased service, in order to take care of the demands of the public.

The Development of the Service Idea

This thought leads me to trace briefly the development of what we know as "service." In the early days, in pioneer districts, the customer drove his own horse to the retail yard and teamed away his lumber. Later on, the small carpenter and builder had his own horse and came to the lumber yard for his material. For a number of years these conditions prevailed, but with the advent of the department store, which introduced free delivery, it became necessary for the retail lumber dealer to fall in line and deliver material to the customers. The small carpenter and builder sold his horse and wagon and allowed the burden of delivery to fall upon the retail yard. There has been one change of more importance, perhaps, than any other. In the pioneer days the carpenter did his own work on the job, buying the rough lumber from the retail yard. With the growth of the towns and the invention of efficient woodworking machinery the pioneer carpenter was replaced by the planing mill, and the planing mill has now become an adjunct of the retail lumber yard, involving a further and very substantial increase of investment.

I have drawn this outline of the development of the industry just to impress upon you the contrast. From being a very crude and simple form of business, requiring little capital and little knowledge of grades and sizes of lumber, or of merchandising methods, the retail lumber business has gradually grown to be the highly complex, specialized industry that it is to-day, requiring a large investment of capital, and calling for great technical knowledge and skill. Its growth has come gradually, so that many of us have scarcely noticed it, and some of us are just awakening to the changed conditions of the present day.

In spite of the increasing complexity of the industry and the greater cost of doing business an increasing number of persons have been attracted into it by the steady rise in lumber prices. These constantly increasing prices have made it possible for many dealers to make a profit, who would not have been able to do so on a level market, because of their failure to keep pace with the increased cost of doing business.

Closer Attention to Merchandising Methods

Up to this stage I have referred to the development within the industry itself, but there came into the field some years ago another factor, which complicated the retail lumber industry and made it imperative for the dealer to give closer attention to merchandising methods. This was the introduction of substitutes for wood, and the growth of other kinds of competition. The old board sidewalk has been supplanted by the cement sidewalk. The wooden fence has given place to the wire and iron fence. Galvanized iron has replaced sheeting, and patent roofing has eaten into the market for shingles. Wall boards to-day are trying to crowd lath out of existence, and so on it goes. The man with a substitute has known that he must use vigorous methods in order to get a share of the market, and he has been alert, active and energetic in establishing a market for his product. The lumber dealer, brought up in the belief that he has a natural product whose market could not be invaded, ignored all this competition, until it was too late. He put up no opposition to it whatever. It would have been easy, in the early days, to have fought against this competition successfully because of the superiority of wood over many of the substitutes and because the general public knew of its superiority, but no opposition worthy of the name was put up, and the public, who are easily humbugged by energetic salesmen and persistent advertising, believed much that they were told, and to-day the situation is so critical that the lumber dealer has no choice in the matter, but must wake up and exert himself if he wishes to prevent even far greater inroads than those which have already taken place. So successful have the substitute dealers been in the marketing campaign that

K. J. Shirton, Dunnville,

E. M. Barrett, Ottawa,

J. C. Scofield, Windsor,

THREE LIVE DIRECTORS OF THE ONTARIO RETAIL LUMBER DEALERS' ASSOCIATION

they have been encouraged to go to extremes and have not hesitated to urge municipal councils to adopt restrictions against the use of wood. In far too many cases, owing to the lack of opposition on the part of the lumbermen, these restrictions, unjust and without reason as they are, have been imposed, and the lumber dealer finds his trade hedged in from all directions. Gentlemen, we have not been awake to our own interests. We have been asleep at the switch, and have allowed our great industry to be sidetracked. What can we do? Is there anything at all that, as individual dealers, we can do? We are face to face with new conditions, increased operating costs, and ruthless competition, and we have been trying all the time to plow our lonely furrows, with a one-horse plow, while our competitors have been forging ahead with the greatest trade cultivators that the world has ever known—organization, co-operation and publicity. These are my convictions. I know also that they are your convictions, and I see, therefore, that there is great reason for faith in the value of the organization which we have been able to create—The Ontario Retail Lumber Dealers' Association.

The Recent Awakening in the Industry

Let me leave the consideration of these subjects, and discuss during the balance of my talk the recent awakening and the new development in the Ontario lumber industry, drawing from them as I go along such encouragement for our work as I think is justified. I take it that the fundamental idea behind the formation of our Association is that of co-operation. I believe in the fact that by association and co-operation, we can effect far more than any of us can effect single handed. Our presence here to-day indicates that each of us is convinced of the truth of this, and it leads me to the thought that, while we have already accomplished much, there is still much to be done. An educational campaign among the retail lumber dealers is necessary, and always will be necessary, to keep alive a proper realization of all that can be accomplished by co-operation and to develop in each of us, as fully as possible, the association idea. As I said at the outset, we cannot expect ever to reach our goal. It is one of those goals which cannot be reached in its entirety, but in striving toward it we rise to greater things each day. Therefore, I urge upon you all to consider yourselves as missionaries enlisted for life in the cause of this Association. For many years we have been individualistic units, each fighting for his own cause, and conflicting with his neighbor, and so it will be a slow process to bring together all who ought to be with us. It used to be said that the farmers were the hardest men to get together, but long ago the farmers left the retail lumbermen far behind in the matter of organization. They have strong associations and organizations to-day with a record of accomplishments that is causing universal astonishment. The retail lumber dealers, those in Ontario particularly, have only recently begun to co-operate. Let us hope that before long the seed which has now been planted will bear plentiful fruit.

Now let me get down to brass tacks. What can we do for ourselves and for our Association? The educational campaign is the most important thing to my way of thinking, that we have to consider. Take the matter of credits and collections, for instance. We should arrange for the exchanging of credit information, so as to eliminate the dead beat, who has cost the industry so much and has added much to

the cost of doing business. I will only touch upon this subject, but I wish to leave it with you as one of the elements in the outline of the possibilities which lie before us.

Betterment of the Terms of Sale

Take next the matter of terms of sale. Is there any good that we can accomplish here? Is there anyone in this room to-day who will stand up and say that he is satisfied with the situation in connection with terms of sale? Here we are, a lot of retail lumber dealers gathered together to help one another, and in the matter of terms of sale we are all at sea. If we can lay down definite terms of sale, and have them so worded that everyone will understand them we will have made a splendid start.

Another matter of vital importance to us all, and a feature of our work in connection with which our Association could be of great use is the study of cost accounting. I am more than ever convinced that a uniform system of bookkeeping should be established for the use of the retail lumber yards. Records should be kept in all yards from the same angles, so that they can be compared and so that the cost of doing business can be fairly determined. This is one of the matters which our Association has already taken up, and some progress has been made, reference to which will be made in the Secretary's report. I urge you all to give this matter close study and to assist the Association in introducing whatever reforms may be decided upon as necessary. We must know our costs in order to determine fair earnings for ourselves and in order to put the industry on a strong financial footing.

As an Association we should arrange for the exchange of ideas regarding service to our customers. The public is daily demanding an increased service, and the retail lumber yard must be in a position to give that service in order to meet the competition of substitutes. We must have efficient equipment. We must understand technical methods. We must endeavor to standardize grades and sizes, and be able to advise the public intelligently as to the proper uses of woods for various purposes.

Speeding Up Retailing of the Product

The retailing of lumber has not kept pace with the progressive method of merchandising developed in the case of many other manufactured articles. More thought and progress along this line has been evidenced during the past ten years than at any time since the industry began. This movement is showing itself in many directions—through efforts on the part of the dealer to meet consumers' needs more economically by using short lengths or other cheap material suited to his requirements; through the advertisement of plan books of houses and farm buildings, the furnishing of ready-cut material, the issuing of pamphlets explaining the use of wood, etc. This movement has really only begun and has a wide field of possibility under the following headings:

- (a) Advertising and demonstrations.
- (b) Salesmanship.
- (c) Education of consumers.
- (d) Reduction of credits and getting nearer to a cost basis.
- (e) Stabilizing of prices.

Mention of the stabilizing of prices brings up a subject of great

importance. The extreme and frequent fluctuations in price demoralize the trade and might be prevented by greater publicity in merchandising lumber. Sources of authentic information on lumber prices are very limited. Many buyers and sellers of lumber are not properly posted about the market in which they trade. Hence, the market tends to be indefinite, and clear-cut open trading is difficult. These conditions are accentuated by the frequent over-production of lumber at the mills, whose influence is felt through all stages of merchandising. If current lumber prices were given greater publicity, it would tend to check extreme fluctuation. Buyers would be better fortified against unwarranted advances in price and there would be less indiscriminate price-cutting. The publication of current retail prices from an authentic source would clear up many misconceptions. The greatest benefit from a systematic publication of lumber prices would be gained by the users of lumber who would be able to follow the movement of lumber prices in the same way as they can follow the price of farm produce or industrial stocks.

It is felt that the lumber trade needs to be more open, and it needs something analogous to the commercial exchange where the price and quantity of each sale is posted and where, whoever wishes may obtain the latest data of the movements of the market. It is difficult to accomplish this in a trade so large, complex and widespread as the retail lumber industry. Something, however, may be done along these lines by the publication monthly of prices representing actual sales, not list prices, and the idea is worth emphasizing here because it points the way to an open rational stabilization of the market. The public will rightfully question any arbitrary method of standardizing prices which involves any form of price-fixing or price-control by combination or joint agreement. Open publicity of lumber prices, however, leaving each dealer absolutely free in determining his own course would be a means to rational competition and would correct the extremes of competition only in a natural and desirable way and the consuming public would undoubtedly benefit from it.

The Open Publicity of Lumber Prices

Our Secretary, acting upon the advice of several members who have given a great deal of their time and thought to the work of the Association, has recently made a beginning in connection with the publication of prices in the "Monthly Bulletin," published by our Association. It would be interesting to hear expressions of opinion from the members present in regard to this step. It is a matter which concerns everyone of us intimately and I feel that it would be well to have the approval of the Association as a whole in connection with the publication of these prices, so that we may continue the practice with the confidence that it is appreciated at its full worth.

Speaking of the prices of lumber leads me to another thought: Do we all realize as fully as we should the increased value of the stocks we are carrying, and the importance of taking proper care of our lumber? Some of us do, and I fear some of us do not. The retailer should have all good lumber properly stored in sheds to protect it from ex-

posure to the weather. He should see that lumber is properly seasoned so as to be in condition for use when delivered to the consumer. He should watch carefully the manufacturing and grading of his lumber to see that it is standard. He should also be in a position to advise his customers as to the proper care of lumber when used. All lumber exposed to the weather should be properly painted to protect it from moisture and decay. Lumber for interior use also requires care from the time it leaves the retail yard until the time it is properly finished in the job if it is to give satisfaction to the owner.

High Cost Due to Economic Changes

In conclusion, Gentlemen: If you will bear with me a few minutes longer, I wish to make some comment upon the present high price of lumber and bring out a few points which the public do not fully appreciate. The high cost of lumber to-day as compared with twenty-five or thirty years ago is due to economic changes which have increased costs in both manufacturing and distribution. These economic changes include (a) The increased transportation costs due to the increasing distances between the mill and the yards, is a large item. (b) Increased investments required because of the greater variety of stock and service demanded; the greater equipment needed for handling and properly caring for lumber and the longer periods which stock must be carried. (c) The development of specialized service as a feature of lumber retailing, especially in the city trade, and the extension of the credit system. (d) The duplication of investments in retail distribution resulting from the large number of yards. (e) The decrease in the purchasing power of money, with the resulting increase in the cost of labor, taxes, supplies, etc.

All these economic changes are of vital interest to the retail lumber dealer and should be studied carefully by him. The retail lumber trade should establish a standard accounting system through which more intelligent prices may be made and sounder finance practised. The development of more standardized and efficient accounting is one of the first necessary steps to economy and to scientific development of the retail lumber industry.

Now gentlemen, before resuming my seat I cannot avoid giving renewed expression to some of my own feelings about the Ontario Retail Lumber Dealers' Association. I have taken great pleasure out of my connection with the Association and I have felt very keenly the honor of being selected to preside over its affairs during the first year of its existence. I am more thoroughly convinced of the value of the Association every day that I do business. To put it briefly, we cannot get along without it, and I know that it will be a success, but the measure of its success will depend largely upon the support it receives from each individual member. I wish I could put my convictions before you with such force that you would all determine to give the Association and its work a substantial portion of your time and thought. That is what will make it a great success. My last thought to you is one which I have already expressed; let each one of us in the future feel that he is a missionary enlisted for life in the cause of our Association.

SECRETARY BOULTBEE REVIEWS WHAT HAS BEEN DONE

Horace Boulton, Secretary of the Ontario Retail Lumber Dealers' Association, presented his report as follows:

In making my first report to you, as Secretary of the Ontario Retail Lumber Dealers' Association, I wish, at the outset, to say a few things of a more or less personal nature, before settling into a statement of what our Association has done, since its organization, in December of last year, I can say to you frankly that although I felt that a great need existed for an organization such as ours, I was faint-hearted about its prospects. I was indeed sceptical, and had a feeling somewhere in my bones that the task was a heavy one and the outlook far from promising. To-day, I can say, just as frankly, that my eyes have been opened, and that there is not among you all a more enthusiastic believer in the value of the work that the Association is carrying on.

A year ago, when the idea of forming an association of the Retail Lumber Dealers of Ontario was being discussed by various retailers, I came into contact with most of those who were interested in the plan. These dealers backed up the proposal as well as they could, but many of them were quite prepared to see the plan fall through for lack of support. Looking around this meeting to-day they will have to admit that their fears were without foundation, and knowing now what has been done by the Association, they will realize that they did not estimate at their full value the seriousness and the ability of their fellow retailers, more particularly those who had conceived this idea and were seeking to put it into effect. It has afforded me one of the most substantial surprises of my life to see how the dealers have got behind this Association and given their time and thought to its development, and coupled with that surprise there has been another, the surprise that has come to me from witnessing the truth of the fact that when

men such as you get together and determine to straighten out your troubles by co-operation, there is no limit to the results that can be secured so long as the objects you seek to accomplish are fair and within reason.

The Results are Really Remarkable

When I took on the work of Secretary of this Association I looked forward with some uncertainty to my first appearance before you and wondered whether there would be anything to show in the way of results. To-day, I think it is probable that you will agree that the results which the Association has already obtained are not simply encouraging but remarkable, and I believe that those of you who, for one reason or another have not submitted your troubles to the Association, will realize that you have been neglecting your own interests.

There is no doubt that we have proved conclusively the force of the old statement that "In union there is strength," and I will come to the proof of this shortly. Let me tell you first of all what "Union" in our case consists of. Our Association was organized on December 21st, 1917, by about a score of prominent dealers from different parts of Ontario. After the meeting they went back home and started to work upon a campaign for building up the membership of the Association. The membership fee which had been adopted was a fairly substantial one and all we could promise in return was that we hoped to do big things for each dealer who joined. They had to take us on faith. I am glad to be able to report that, up to date, there have been no less than 131 dealers in Ontario who have taken us on faith and that the Association is now making most encouraging progress.

We were most fortunate, at the time of organizing, in having the closest possible co-operation and sympathy from the wholesale lum-

ber dealers of Ontario, who happened, at the same time, to be forming an organization of their own, and who joined in with us in bearing the expense of an office and staff. In meeting these expenses we have had also the assistance of the Lumbermen's Credit Bureau, of Toronto. It would have been an extremely difficult matter to meet the heavy financial burdens of the first year if it had not been for this fortunate sharing of the cost. The sympathetic interest which we have received from the wholesalers, moreover, has been of great advantage to us. The wholesalers lost no time in instructing their salesmen to act as canvassers for our Association and they were responsible for bringing in a large portion of the members whom we secured. We cannot thank the wholesalers sufficiently for this assistance and it behooves us to reciprocate as far as we possibly can by seeing that the work of our Association is conducted in such a manner as to promote a friendly feeling between the wholesalers and ourselves.

Adjusting Delayed Deliveries of Stock

Very early in our existence opportunities began to develop for the Association to be of value to its members. In response to a circular letter sent out to the members we received a number of reports from dealers telling us of orders for stock which they had placed many months previous and which had not yet been shipped. There were other matters submitted to us, all of a more or less similar nature, and at once we commenced the work of taking the matter up with the wholesaler or other party who was concerned. It was not long before results commenced to develop. So well had the work of advertising our Association in one way and another been done that the wholesalers and others with whom we had to correspond on these matters, realized, almost without exception, that they were dealing, not with

We may say that we give you full credit for getting this company to give us the car that they have forwarded to us in place of the one that was ordered in November, 1916, and which we were unable to get them to deliver. No doubt dealing through the Association as we have done has had the desired effect. Yours truly, James Davidson's Sons." Gentlemen, could there be any stronger proof of the value of co-operation?

These are not isolated examples. On January 16th, 1917, one of our members gave an order to a British Columbia firm for a carload of XXXXX shingles at \$3.75 per thousand. Fourteen months later, in March, 1918, the shingles were still undelivered and the company asked us to see what we could do. The last chapter in the story of this case was a letter from the British Columbia firm under date of June 14th, 1918, in which they say:—"We appreciate the trouble you have taken in straightening out the matter with the _____ Lumber Company. We enclose our acknowledgement of their order for a carload of shingles to take the place of the car originally ordered, and we will endeavor to have shipment made promptly." The interesting thing to note in this case is the fact that the British Columbia firm express their appreciation of the services of our Association.

Another case was quite similar to the previous one. An Ontario Company ordered two cars of shingles from a Vancouver wholesaler in December, 1916, and on June 11th, 1918, 18 months later, they gave up hope and asked us to see whether we could get the shingles delivered for them. On July 29th we received the following letter from them:—"We wish to express our sincere appreciation of your success in settlement of the long-delayed shipment of the two cars of shingles for us. As we had made every effort to get this stock, which was ordered in December, 1916, we more fully realized the weight of the

one individual retailer, but with a body representing all the successful dealers in the province, and as sensible business men they adopted a reasonable attitude from the start. They found us also in a conciliatory mood and the result was compliance with our suggestions with as little delay as possible. Let me mention one or two instances.

First of all in point of time was a case which made for our Association, I think, one of its most enthusiastic members. The firm concerned already belonged to the Association, but the service we have been able to perform for that member and the benefit we have been able, by means of this service, to be to others of our Association, have, I think, convinced that member that so long as it is in business the Association will deserve its support.

Among the numerous reports which we received of shipments of stock which were long overdue, was one from a firm in Ottawa. On November 16th, 1916, they placed an order with a wholesaler for a car of yellow pine finish, and when they wrote us on March 9th, 1918, they said:—"We have had nothing but promises so far regarding the shipment of this stock. We thought of placing the matter in the hands of our solicitors. Instead of doing so they asked the Association to take the matter up with the wholesale firm. The result was that we received the following letter from the Ottawa firm, under date of April 28th, 1918:—"Dear Sirs: We wish to take this opportunity to thank you for the interest you have taken in the matter of our long-delayed shipment of lumber from the _____ Lumber Company.

Ontario Retail Lumber Dealers' Association when a settlement was made last week."

We have other cases in hand to-day and the correspondence up to date indicates that they will also be settled satisfactorily.

The influence of our Association does not always have to be brought to bear directly in order to be felt. This is illustrated by a case in connection with which it is not advisable to mention any names. One of our members placed an order early this year with a wholesaler for 200,000 feet of yellow pine at a very low price. Three cars were shipped and the wholesaler then endeavored to have the balance of the order cancelled. The retailer agreed to cancel 100,000 feet of the order for a consideration of \$5 per thousand feet to be paid him for the loss he had suffered by having to purchase the stock elsewhere. This entitled him to a cheque for \$500 from the wholesaler. Instead of paying out the money, however, the wholesaler made a compromise with the retailer and bought from him, at a good profit to the latter, a block of 100,000 feet of stock which the retailer owned in Northern Ontario. Referring to this in a letter to the Association, the retailer says:—"We feel pretty sure that if the Association had not been in existence the wholesale firm would not have considered our loss at all. This one transaction has been worth more to us than the Association will cost us in ten years."

There was another case of a somewhat similar type, in connection with which I am not at liberty to mention names, but which

amounts to this, that a certain wholesaler and a retailer were rapidly drawing near to a law suit over an order for stock which had not been delivered. The wholesaler finally assured the retailer that he did not want a law suit and asked if the matter could not be settled. A settlement was made for a substantial sum. This retailer, discussing the matter with us assured us that the existence of the Association was a powerful factor in enabling him to secure this satisfactory result.

It is interesting to note how the influence of the Association spreads. As you all know, there are other Associations similar to ours, in Western Canada and in the United States. It is natural that these associations should co-operate with one another. There is a firm of retailers in Buffalo who are members of the Buffalo Lumber Dealers' Association. Early this year they placed an order for four cars of lumber with a Toronto wholesaler. The stock was to come from a mill in the State of Michigan. Up to the middle of June none of the stock had been shipped and the Buffalo Association asked us to take the matter up for them. We did so and secured shipment of three cars and expect that the fourth will be delivered soon.

Before leaving this part of my report let me give you a little summary of what some of these settled cases mean in dollars and cents to the firms concerned. From figures furnished by the firms themselves the results in three cases are as follows:—

Saved to Member A	\$260.00
Saved to Member B	200.00
Saved to Member C	250.00
Total saved to three members	\$710.00

Two cases have been under negotiation in Ontario, one in connection with the trade in St. Thomas, where the dealers complained of manufacturing firms selling to contractors. We have had a number of letters and several personal interviews with the manufacturers concerned in this case, and in connection with one of them the work has now commenced to bear fruit. One of the St. Thomas dealers writes us under date of August 2nd as follows:—"A representative of the manufacturer came to town recently and arranged a meeting with ourselves and other dealers." They discussed the situation together and finally an arrangement was made which means that this particular manufacturer will in future give the dealers the protection to which they are entitled.

A certain British Columbia wholesaler, one who has shown his interest in this Association from the start, wrote us a few weeks ago to say that he had received a request for a carload of shingles from a party in a certain Ontario town, whom he believed to be a contractor and builder, not a legitimate builder. He asked me for a report about this saying that he did not want to sell him unless he was a legitimate dealer. It turned out that the party was only a contractor and builder and we have advised the Vancouver wholesaler to this effect. We also gave the Vancouver wholesaler the name of the local dealer and asked him to put the business through his hands. This local dealer joined our Association as soon as the circumstances of the case were reported to him.

Conclusive Proof of Co-operative Benefits

Gentlemen, I could go on for quite a long time yet giving you details about cases of this sort that are being dealt with. The recital of the cases I have referred to, however, has occupied quite a long time. I feel, however, that I have been justified in speaking of them as they are such conclusive proof of the benefits of co-operation. I will try to make the balance of my remarks as brief as possible.

I need not say much about the Monthly Bulletin which our Association is publishing. You are all familiar with it. It has been a success from the first number. Wholesalers and manufacturers have realized what an excellent medium the Bulletin is for advertising. No retailer can possibly afford to be without it. And the reason for this is the fact that the retailers themselves are furnishing nearly all the reading matter that goes to make up the Bulletin. I hope that this interest in the Bulletin will be continued, as it means continued success and without it the Bulletin could not exist.

The work of our Association during the first few months of its existence has naturally been devoted, to a great extent, to the campaign for securing members. We have secured a most encouraging membership list, but we must have double the number before we begin to feel that we are approaching a representative list. We have 125 paid members to-day and I estimate that there are something like 450 firms which might belong. It should be an easy matter for us during the coming year to increase our membership to over 200, possibly approach 300, if you will all take a hand in it. It is essential to our existence that we should do so. Financially, we need the additional members, and as an Association we need their influence. I believe that we can do it and I feel that we will do it. When you go back home see what you can do in the way of stirring up those who have not yet joined. They are neglecting their own interests and at the same time they are preventing the Association from exerting its

full influence, by remaining outside. When you have heard all the reports and discussions of this convention you will understand fully why everyone should join. I ask you all to make a hobby of the Association and see that it prospers.

It would lengthen this report beyond the limits of my time if I were to attempt to outline a programme of suggested constructive work. Nevertheless, there are lines of work which it seems to me should be mentioned, and I will simply refer to them and pass on, leaving them for general discussion.

How Cost of Doing Business Varies

One line of constructive work that we have already adopted is that of the cost survey. We regret to say that, in spite of our urgent request for information from members, on their operating costs, only a few members have responded. We would like to receive a far larger number of reports than we have, and with them we will be able to furnish exceptionally valuable data upon which to base a practical statement on the subject that will be useful to every retail dealer. Up to date we have received thirty-eight of these reports. It is astonishing how different the results shown by the different dealers are.

Take, for instance, the general summary, that is, the percentage of the total sales which represents the cost of doing business. This varies all the way, according to the reports received, from 18 to 45.18 per cent. As the object of this survey, however, is to secure reports from a large number of firms, in order to be able to work out a fair average, it does not seem to us that we have as many on hand yet as we can expect to receive and we are delaying the preparation of a complete analysis until more of the members have sent in their reports. Those of you who have not yet done so are urged to fill in the blank form with which we have already provided you for this purpose and return them to the Secretary at once.

Other ways in which the Association can be of service to the members are numerous and we would like to see many of them adopted. A plan book service has been proposed by some of our members. This is a practical way of assisting the members to obtain and hold trade. The preparation of a standard list from which discounts can be deducted according to the locality of the yard is another service which has been seriously proposed by one of our members and which ought to be given consideration. The insurance question is something that will bear a lot of study. This matter will be laid before you to-day in some detail. In connection with advertising there is room for a lot of good work on the part of the Association. What I would suggest is the appointment of a committee for the purpose of making a study of the needs of the members of the Association from an advertising point of view. I believe that the recommendations of such a committee in the direction of furnishing an advertising service to members could be put into effect readily and be of much value. It would probably include the preparation of copy and illustrations for use in daily and weekly papers. These are only a few of the subjects that can be taken up if the members of the Association see fit. It lies with the members of the Association themselves to make the Association as useful as they desire and I make these suggestions in the hope that some of them at least will lead to practical results.

Encouraging Financial Showing Revealed

In conclusion, Secretary Boulton referred to the finances of the Association, and stated that so far as receipts and expenses appeared at the present time, they would about balance at the end of 1918, and that there would be a small sum on the right side of the ledger. The total amount received in fees to date was \$2,170, and there would also be a revenue of some \$674 at the end of the year from the "Monthly Bulletin." The expenditure for the present year would be \$2,678. On the whole, the situation was most encouraging as the running expenses were abnormally heavy for the first year owing to the purchase of office furniture, etc., and the payment of \$375 for subscriptions for members to the Lumbermen's Training Course, an expense which would not have to be repeated in the future. Great credit for the encouraging financial situation was due to those members who had so readily come forward and joined in large numbers. In conclusion, Mr. Boulton, as Secretary of the Retailers' Association, said that it had been a great pleasure in attending to the work and he looked forward, with the assistance of the members, to making the coming year's record a far better one than even that which had been laid before them on the present occasion.

Becker & Company of America, of which Harry I. Mathers, Halifax, N.S., is managing director, state at the present time that they are not importing any pulp at all. With regard to exports, there is no chance of shipping anything to England on account of the tonnage situation. The company were shipping quite a lot of ground wood pulp to United States points until the railways all increased their rates, which killed the business. Becker & Company of America are, however, exporting some ground wood and sulphite pulp to South American ports.

THE RAPID EXTENSION OF ASSOCIATION MEMBERSHIP

John B. Reid, chairman of the Lumbermen's Section of the Toronto Board of Trade, and also of the Toronto Retail Lumber Dealers' Association, gave the delegates a breezy and optimistic talk on the benefits of co-operation and association. Mr. Reid outlined what distrust, prejudice and destructive competition had wrought in the past among members of the trade, and contrasted former conditions with the present satisfactory state of affairs which had been brought about by co-operation which implied unity, fraternity and confidence. There was no lumber merchant to-day in the city of Toronto who could be induced to revert to the old state of strife. The happy condition of things and the feeling of brotherhood and trust which existed among the members was borne of the new spirit of the times in which men are learning to know and appreciate one another better and recognize that there is much good even in the worst of us. Mr. Reid concluded by referring to the beneficial effects of cheerfulness and optimism and the spirit of live and let live. Life was larger than the dollar, and even if no material benefits were reaped from the Association he contended that the advantages of the social side alone well repaid any member. He expressed every confidence in the future of their body and in the growing unity, welfare and uplift of the retail lumbermen of Ontario, all of whom were good fellows and were learning to know one another better. The speaker thought the men in the trade in smaller cities or in certain districts should get together more frequently than they do and discuss topics of mutual interest, for by the exchange of views and experience greater business always resulted and one's knowledge of affairs was broadened and strengthened. Mr. Reid then read the report of the Membership Committee as follows:—

Your Membership Committee is pleased to report a splendid roll of members secured during the first few months of the life of our new

Association. The total paid membership to-day is 125, and application cards have been received from 7 other dealers who have not yet paid their fees, making the actual membership, paid and unpaid, 132. Our membership list represents retail yards from one end of the province to the other.

As you know, the province was divided into five districts for organization purposes, and so as to make it easy to hold more frequent meetings than once a year in the various districts, The paid membership is divided as follows among the districts: Eastern District, 18 members; Southern, 30; Western, 40; Central, 33; Northern, 4. Total, 125 members.

The following table shows the distribution of the membership according to the amount of the annual fee paid: \$10, 38 members; \$15, 60 members; \$25, 13 members; \$30, 4 members; \$35, 4 members; \$40, 1 member; \$45, 1 member; \$50, 4 members. Total, 125 members.

The average fee per member is \$17.36. The receipts from fees by districts are as follows: Eastern, \$390; Southern, \$430.10; Western, \$615; Central, \$660; Northern, \$75. Total, \$2,170.10.

Out of the above amount there was paid out by the Association to cover subscriptions for Training Courses \$375.00.

There is a splendid field for a wide extension of our membership among the smaller retail lumber dealers of Ontario, and it is evident that we must have as wide a membership as possible, in order to accomplish the best results. The present members of the Association can do much to gain new members if each will but take a personal interest. The results that have attended the efforts of the few who have helped show that herein lies an unceasing opportunity for future gains and your committee would earnestly bespeak your co-operation to that end.

MANY TRADE DISPUTES HAVE BEEN AMICABLY SETTLED

The report of the Committee on Arbitration and Inspection was read by Secretary Boulthée and was as follows:—

Your Committee on Arbitration and Inspection consists of the Honorary Secretaries of the five local districts, who have power to appoint local committees, or to call for the assistance of local members in dealing with matters which come properly under their attention. At the last meeting of the Directors of our Association, the Secretary was instructed to take up individually all matters concerning disputes between our members and wholesalers, or others, which might be submitted to him, by members of the Association, and to endeavor to reach a settlement. To some extent, therefore, the work of this Committee, so far as arbitration is concerned, was placed in the hands of the General Secretary, and details of some of the more important matters with which he has had to deal are contained in the report of the General Secretary. It is unnecessary, therefore, for me to offer a fully detailed report upon arbitration.

I believe that it was the intention of the Directors, when instructing the General Secretary to act in this manner, that in any case in which he might not be successful in bringing about a settlement of a dispute, the matter should be referred subsequently to the Directors themselves for further instructions. So far we have been able to settle most of the disputes that have arisen, but it is conceivable that others will develop in connection with which we will not be so fortunate, and in such circumstances these will be referred to the Directors or disposed of in such manner as may be provided for by definite instructions to the Secretary in effect at the time.

The Legitimate Field for Wholesaler

There is one matter we have not been able to bring to a conclusion as yet; namely, a request from one of the members for a ruling, by the wholesalers, as to the legitimate field of business for a wholesale firm. This matter developed out of a case in which one of our members reported a sale of a large amount of material to an important industrial corporation, to be used in the construction of their plant. The wholesaler concerned was communicated with by the Secretary, and while expressing a desire to meet the wishes of the dealers, whenever possible, urged that in this particular case, if his firm had not accepted the order, other wholesalers would have done so, and that it was, moreover, an order for such a large amount of material that he did not believe any of the dealers in the district would have been able to fill it.

When this statement was laid before the dealer who made the complaint, he replied as follows:

"I feel that this should not be passed over without some ruling

being laid down, so that the wholesalers and retailers would explain what line they are working on, and I would suggest that the wholesalers make a ruling upon this point. Personally, I feel that the wholesalers' legitimate ground to sell lumber is not for construction purposes, going into a building, and that the fair way to have handled this order would have been for them to have put it through one of their retail customers."

Acting upon the suggestion in this letter, your Secretary laid this matter before the Directors of the Wholesale Lumber Dealers' Association. They discussed the subject quite extensively and found that they were not able, upon the spur of the moment, to reach a satisfactory conclusion. A motion was carried:

"That the Directors of the Wholesale Lumber Dealers' Association should meet at a later date to consider this matter, and that in the meanwhile the members should give it their deliberation, also that the Secretary of the Wholesale Lumber Dealers' Association should write to the retail dealer who brought the matter up and advise him of this decision."

That meeting of the Directors of the Wholesale Lumber Dealers' Association was held on June 14th, and since that date no other meetings have taken place, a rest having been taken for the duration of the summer months. The Association will resume its meetings this month, and probably this subject will again be taken up. If you desire, as an Association, to pass a resolution on this subject, it will undoubtedly strengthen the case as laid before the Wholesale Association by your Secretary. While the problem of setting down hard and fast lines to allocate the field of operation of a wholesaler is a somewhat difficult matter, it is important that it should be thoroughly discussed. I believe that the wholesalers will give it their best attention, and that if they find it possible to reach a reasonable conclusion they will do so. At the same time, it is one of those matters in connection with which it is exceedingly difficult to establish a definite boundary and it is not to be expected that a wholly satisfactory result will be reached at all easily, or at an early date.

An Eastern Complaint Adjusted

A matter of a somewhat similar nature developed in connection with the trade in Ottawa. The Secretary of our Eastern District reported on July 3rd that a wholesale firm in that district, and some of the employees of another wholesale firm, were selling to retailers' customers, in large and small amounts. The Eastern District asked how this situation should be handled. Your Secretary replied, offering to take the matter up with the wholesalers concerned, upon being

informed of the particulars of the case, and also suggested that, as a last resource, it might be advisable to bring the matter to the attention of the Wholesale Lumber Dealers' Association, Inc., and ask them to take such action as they could. Finally, however, the Eastern District concluded that, in this particular case, it might be better for them to take the matter up personally with the wholesalers concerned, and they decided to adopt this course before placing it in the hands of the Ontario Retail Lumber Dealers' Association for definite action.

As no further correspondence has taken place on this subject it has probably been settled satisfactorily. In all such cases, however, the services of your Association are at the disposal of its members, and will be used in whatever manner seems advisable to each particular instance.

Welcome Suggestions Regarding Inspection

Inspection, the other branch of the Association's work which has been assigned to our committee, is a subject which is capable of many interpretations, and I presume that, from a committee point of view, it is our duty to keep posted upon all its aspects and be prepared to submit such proposals as are in the best interests of the Association.

No matters have been brought directly to our attention in connection with this subject. The committee is desirous, however, of serving the Association to the best of its ability and will welcome any suggestions in connection with inspection which may be made to it by members. It seems to me that there is, in this connection, a possible field of Association usefulness which should be cultivated, or at least studied, with a view to cultivation as soon as considered advisable; and that is the matter of establishing grading rules. This is a very large subject, and one upon which I do not for a moment pretend to offer anything of value, though I do desire to suggest that it would be greatly in the interest of the members of our Association if a set of grading rules could be adopted in connection with the more

important line of lumber which we purchase. The mere fact that such a set of rules had been adopted by our Association would go a long way towards simplifying the confusion that exists to-day. This would be a matter which could not be taken up lightly. It would require long and careful study by a specially selected committee. I submit this as a suggestion, in the hope that it may lead to discussion and finally to results.

Since the commencement of the publication of the Monthly Bulletin of our Association, I have been much interested in some correspondence which it has contained on the subject of standards for moulding and matching. The subject was introduced, I believe, by a letter from Mr. Frank Glenday, manager of the McLaren Lumber Company, of Brockville, Ont., who suggested the adoption of the styles and sizes used by British Columbia manufacturers, claiming that they would result not only in uniformity, but less waste. Correspondence from the Ottawa dealers, I see, shows some disagreement with Mr. Glenday. They point out that the standards in use in their market are also used largely in Ontario and the Eastern States and that they would be quite practical for general use in Ontario. A letter from R. Laidlaw and Company, Toronto, upon the same subject, appeared in the Monthly Bulletin for August, pointing out the benefits that would result from the adoption of standard sizes for dressed lumber and suggesting the use of a set of standards which have been adopted by the dealers in Toronto. I take it that it is the desire of each of those who have expressed their views on the subject, not so much to promote the acceptance of their particular system of standards, as to have the matter discussed with a view to reaching a possible general agreement on the subject. Your committee would welcome definite instruction indicating whether it is the wish of the Association that it should obtain the views of its members and endeavor to work out from them a set of standard sizes which could be given the official approval of the Association.

FIRE INSURANCE AND WORKMEN'S COMPENSATION ACT

Walter C. Laidlaw, of Toronto, chairman of the Insurance Committee, presented the report of that committee, which was under two headings—Fire Insurance and Workmen's Compensation Act.

In connection with fire insurance, Mr. E. D. Hardy, of Ottawa, has asked to be allowed to speak briefly about his Inter Insurance Co.

In connection with Workmen's Compensation Insurance, Mr. F. M. Tobin, Secretary of the Federation of Industrial Accident Prevention Associations, under the Workmen's Compensation Act, has kindly agreed to address us on the work of the Woodworkers' Accident Prevention Association, of which each one of us is a member.

This report will therefore be brief. It has been the aim of your committee to follow on your behalf the trend of events in the insurance world so far as they concerned the lumber industry, and also through our district committees to keep in touch with our various members who had insurance problems and to assist them as far as possible.

We also believe that an important function of the Insurance Committee is that of fire prevention and accident prevention by a campaign of Safety First, and would urge on each of our members their duty to the trade and to the nation to do their utmost to eliminate the annual waste by fire and accident, largely caused by lack of due care.

Fire Insurance

For over a year an insurance investigation has been carried on in Toronto by Hon. Justice C. A. Masten, as Commissioner under the "Ontario Insurance Commission." His report has not yet been issued, but will no doubt contain recommendations of far-reaching value to the insuring public.

The early part of the sittings was devoted to the operations of the Canadian Fire Underwriters' Association, hearing evidence regarding unfair treatment in rates and other inequalities. About 80 per cent. of fire insurance in Canada is controlled by the C. F. U. A. While the cost of insurance must always be governed by the ratio of fire losses, we contend that the expense of carrying on the insurance business is too high and the agents' commissions out of proportion to the service rendered.

The C. F. U. A. are trying to get a tax put on premiums paid to unlicensed companies whose head office is outside Canada, which would give them a practical monopoly. They already have a tax of one per cent. on fire losses in unlicensed companies which is very unfair. The only protection which the insurer now has against exorbitant rates is the competition of unlicensed companies, and we are vigorously opposed to any tax of this nature.

The latter part of the Ontario Insurance Commission's work consisted of taking evidence with respect to fire prevention and fire waste. In order to reduce the cost of fire insurance, we must reduce fire loss.

It is the rate of loss by fire which determines in the long run whether insurance rates shall be low or high. Thirty million dollars went up in smoke in Canada last year. It cannot be disputed that this is largely the result of carelessness. Our fire loss per capita in Canada is nearly five times what it is in Europe, and our average insurance rate is nearly five times the European rate.

It is interesting to note that European cities outside of London, Paris, and Berlin, have paid little attention to modern fire-fighting equipment. They have directed their chief energies to fire prevention. On the contrary, Canada has developed very elaborate appliances. The fire brigades of Canadian towns and cities are far ahead of those of other countries. Our public bodies aim to extinguish fires. Europe has gone further and aims to prevent fires. The average annual maintenance cost of city fire departments in Canada is \$1.43 per capita, and in Europe only .21c per capita, and yet our fire loss is nearly five times their fire loss.

Our public bodies have aimed to prevent fires by stringent building codes, which are absurd in the unfair restrictions on the use of wooden building material. Each one of us in the retail lumber industry should be prepared to refute the ridiculous idea that because wood burns, therefore the use of wood in a building is a cause of fire. Statistics show that it is not the frame dwelling house that causes our enormous fire loss. Fire insurance companies are all eager to write dwellings at very low rates and pay agents high commissions for this class of risk. The farmer's crop is safer in a frame barn with a lightning rod than in a barn built of steel and concrete with metal roof and siding without a lightning rod. A factory or warehouse built with timber "factory construction" is a far safer investment in every sense than a steel and concrete structure. It costs less. It can be changed to fit a growing business. In case of fire the steel and concrete building is left a hopeless mass of twisted junk, where the timber construction will resist fire longer and will not tear the walls down with the action of heat like steel does. Eighty per cent. of Canada's fire waste is from fires in factories and business establishments.

Our building codes should pay less attention to wood and more attention to heating, plumbing, electric wiring and construction details and the general upkeep of buildings. No buildings are fireproof. The most fire-resisting structural materials are not proof against a fierce fire. Fused bricks will run like molasses and calcined concrete columns will crumble into dust.

Inspection and Control

Insurance companies are not the sufferers from fire waste. They charge rates to cover it. Insurance agents are not concerned as they get higher commissions from high rate premiums. It is the property

Allan S. Nicholson, Burlington,

B. F. Clarke, Glencoe,

W. M. Tupling, Orillia,

TRIO OF ENERGETIC DIRECTORS OF THE ONTARIO RETAIL LUMBER DEALERS' ASSOCIATION

owners who pay and the loss is a loss of national wealth. The citizens of Canada must wake up to the need of fire prevention.

Instead of an army of firemen playing cards in our fire halls, we could have competent, intelligent men to go over our properties, to consult with us and advise us on fire prevention with authority to compel the careless man to keep his premises in order. The man who is negligent or fails to use due precaution to prevent fire should be held liable for damage occasioned thereby to the property or life of others. It should be a criminal offence to smoke in a woodworking plant or to drop lighted matches. Many plants provide a lunch room where the men may smoke with a tub of water in which to drop their matches, ashes and stubs. They prefer this to the risk of fire from secret smoking on the premises.

The fire loss in Canada during four years, 1912 to 1915, was \$85,000,000, an average annual loss of over \$21,000,000. 789 persons lost their lives by fire and over 2,000 were seriously injured. The average fire loss per capita in Ontario was \$3.07.

Fire prevention is a paying proposition, and public opinion should be aroused to recognize this. Fire waste must be regulated for the common good by fire prevention laws and an adequate system of inspection. This is the only sure way to reduce the cost of insurance.

Our expensive fire department, our expenditures on water supply and our revised building codes have failed to check the fire waste in the face of the carelessness and indifference of individuals. In European countries the individual is held responsible for his negligence and must make good any loss or damage caused by fire spreading and also the expense of the fire department in fighting the fire. Our Dominion Parliament should pass similar legislation to restrain the careless individual from this reckless destruction of national wealth.

C. F. U. A. Rate Increase

On April 15, 1918, the C. F. U. A. put into effect a general increase in rates. In the May issue of the Bulletin a full statement was given of this revision in rates as it applied to lumber yards and planing mills. These included certain extra charges for the privilege of working overtime. We are pleased to state that the C. F. U. A. has since cancelled these overtime extras as they were not workable.

The other advances are still in effect by the tariff companies, but a lot of insurance has been lost by them to the non-tariff companies who did not increase their rates.

The C. F. U. A. justify their increased rates by claiming:

- (1) That fire losses are increasing.
- (2) That underwriting costs are higher.
- (3) That the general business of underwriting is more difficult and hazardous.

These are sound arguments for a reasonable rate increase. The criticism we make is that no one knows what is a reasonable rate increase. Rate making, like mill work estimating, is largely guess work. One class pays too much and another too little. Our Underwriters' Association has simply followed the lead of the various Underwriters' Associations in the United States.

II. Workmen's Compensation Insurance

The Ontario Workmen's Compensation Act went into force in 1915. Prior to that date if a workman was injured his compensation

was usually a matter of compromise. Some employers carried the risk themselves and made the best settlement they could with the employee. Others insured the risk with a liability company and it was up to the company to adjust with the injured employee. This no doubt means increased operating cost under government control and it also means that the injured man gets more than he did under the old conditions.

Every employer in Ontario is required to make an annual report of his payroll and to pay an assessment thereon at a rate fixed by the Board from year to year. The various industries are grouped into some twenty classes and rates fixed according to the accident record plus their proportion of the administration cost.

Retail lumber yards and planing mills come under class 4 and our rates have been increasing as follows: 1915, \$1.50; 1916, \$1.80; 1917, \$1.80; 1918, \$2.00. The Board has made a special rate on lumber yards without planing mills of \$1.40 for 1918, effective only on application by the employer. Those of our members who have a yard but no mill should make application for this rate.

As in fire insurance, the only way to reduce rates is to reduce losses. If certain members of our group are careless or indifferent in regard to safety first, the rest of us will have to pay for their accidents by increased assessments. It is simply mutual insurance under government control.

The Act provided for the organization of Accident Prevention Associations by any group which wished to thus protect itself. Our group organized the Woodworkers' Accident Prevention Association, and each member of the group automatically became a member of this Association. You pay your fees every year along with your assessment and the Workmen's Compensation Board hands them back to the Association by paying all the expenses of the Association. This saved us the trouble of a membership campaign and has given us the necessary funds to operate efficiently.

The Woodworkers' Association has a Secretary, office staff and a corps of two inspectors. Our Secretary, Mr. Tobin, is also secretary of a number of other similar safety associations, and also of the Federation of Industrial Accident Prevention Associations, so that the whole work is co-ordinated and operated under most efficient and economical conditions.

It should be borne in mind that the staff of the Accident Prevention Association is not appointed by the Government, but by the employers. The aim is to keep the appointment out of politics and to select men of good judgment and sound common sense. At the annual meeting of the Woodworkers' Accident Prevention Association you appointed a committee who have had this in hand. When the inspector calls on you please remember that he is not a government inspector but your inspector, ready to consult with you and advise you on the subject of accident prevention. Our inspectors report that in almost every instance their reception has been cordial and their recommendations have been carried out. This shows a good spirit of co-operation and we hope it will result in reduced losses.

Recommendation to Workmen's Board

Your executive committee at their meeting on March 26, 1918, passed the following resolution:

"That the Ontario Retail Lumber Association urge the Ontario

Workmen's Compensation Board to adopt the following principles:—

- (1) That all assessments should be based on the so-called Current Cost Plan, that is to say, deferred claims shall not be capitalized.
- (2) That all doctors, nurses, etc., should be under the jurisdiction of the employer instead of under the Board, provided that such medical care and hospital accommodation is adequate and satisfactory to the Board.

We are pleased to state that the Board has recently adopted the merit rating system, whereby the employer who has a number of ac-

cidents pays a higher rate and the employer who has few or no accidents gets a lower rate. This should tend to stimulate interest in accident prevention.

It has been demonstrated by safety experts that 75 per cent. of all industrial accidents can be prevented. One out of every three accidents could have been prevented by mechanical guards, while the other two can be prevented by educational methods, by reaching the men on the job and winning their interest and co-operation. The way to interest the workmen in safety is to give them an actual part in promoting safety through a safety committee of the men themselves. Safety pays.

SAFETY WORK IN THE FACTORY AND LUMBER YARD

F. G. Lovett, Toronto, Inspector of the Industrial Accident Prevention Associations under the Workmen's Compensation Act of Ontario, gave a vigorous and informative talk on "Safety". He pointed out that some manufacturers only took an interest in the work from the financial standpoint, and when they have complied with certain recommendations, appeared to be satisfied. It was true by the elimination of the number of accidents in a plant the assessment costs were reduced. If the inspector's suggestions have been carried out and the proper report filled in, the head of a factory frequently thinks that he has done about all that is required and is quite satisfied. Such men had not discharged their obligation, for there was a higher side to the question, which was the human element. This was the most important and vital in the success of safety progress in any plant. Without skilled help to operate it, the best equipped factory would remain idle. The scarcity of labor was being experienced on all sides and while a machine could be replaced in the event of an accident, it was not always possible to obtain a competent operator for a machine. The first duty of an employer was to his employees. "Because," added the speaker, "there has been no accident in your plant for a number of years is no guarantee that there will not be one some day. No accidents do not imply no hazards; the hazards are there nevertheless. As an employer you cannot ask your employees to be careful unless you, yourself, are careful, manifest some personal interest in them, and educate them to use every precaution against mishaps. The work of the Industrial Accident Prevention Associations should appeal to you not alone from the dollars and cents standpoint. It should exert the human element in you as well. Put your factory and lumber yard in a safe condition. The superintendent of your plant must be one who is thoroughly interested in accident prevention in order that those under him may be imbued with the same spirit. We are endeavoring to carry out an educational campaign and interest the employee as well as the employer. Our bulletin service is doing splendid work, and reminders and instructions are given in the matter of being careful. The responsibility for accidents does not always rest with the employee; sometimes it is the employer's fault.

Co-operation, Efficiency and Safety.

"You must have co-operation all around and satisfied employees if you are going to have efficiency in your plant, and you cannot have efficiency unless you have safety. In the larger plants educational campaigns have been carried out and local Safety Committees appointed among the employees. These committees have frequent meetings, inspect plans, and look out for dangerous conditions, operations and practices. The duty of the Safety Committee is to remind the employer of any hazards and secure the co-operation of the employer and every one engaged in the establishment."

Continuing, Mr. Lovett pointed out that all plants which took up safety work and reduced accidents are getting the benefits of decreased rates. He instanced several cases where inspectors had made certain recommendations in the interest of safety work which could have been carried out at small cost, but the matter had been neglected owing to the plea of being busy or from some other trifling excuse and serious accidents had occurred which might have been prevented. There was the careless employer as well as the careless employee. He referred to the fact that he had been instrumental in organizing Safety Committees in twenty-five wood-working plants in Ontario. The reason for safeguarding woodworking machinery was to prevent accidents to operators and others. There are certain accidents which are common to individual machines, and with these and the prevention thereof, the speaker dealt in detail, pointing out the proper guards for the swing cut-off saw, the rip saw, the kick back, the jointer or buzz planer, the band saw, the shaper and others, all of which will be fully presented in a special article by Mr. Lovett in the next issue of the "Canada Lumberman."

Advantages of the Bulletin Service.

Mr. Lovett called attention to the Bulletin service furnished by the National Safety Council of America, and also the booklets issued

on Safety Practices. The Bulletins would be available in Canada with the name of the Ontario Association printed upon them. They were read by six million men in the United States every week. Four bulletins were issued each week and two sets could be obtained weekly by employers, having from one to one hundred hands, for fifteen dollars a year; from one hundred to two hundred and fifty hands for twenty-two dollars and fifty cents a year. Employers spent large sums in fire insurance, sprinkler systems, water tanks, and mains, and considered the money well expended. All these had to do with material things. The great question should be, what are you doing to protect your men, for there are certain things that money cannot buy.

Mr. Lovett pointed out that if a proper notice was put up in a plant and a workman refused or neglected to use the safety guards

Frank G. Lovett, Toronto
Who spoke on Safety work in the planing
mill and retail yard

and disobeyed the rules, he forfeited all rights and claims to compensation. The Workmen's Compensation Act provided for this. The speaker showed a blue metallic sign with prominent white lettering, which he said could be obtained for one dollar and thirty-five cents, the wording being as follows:

"Notice.—Employees who refuse or neglect to use safety guards provided for machinery or who disobey rules for safety or prevention of accidents, forfeit their right to compensation or medical aid as provided in sub-section one, of section three, Workmen's Compensation Act, Industrial Accident Prevention Associations."

In filling out a report on any accident the employer is asked explicitly how the mishap occurred and if any of the rules of the plant were disregarded. Mr. Lovett added that if any employer drafted a set of rules, the inspectors would be glad to revise them. They were now working on a set which might be used in all wood-working factories. He concluded by announcing that he would be pleased to answer any questions in regard to the operation of the Act.

"If a contractor has a gang of men on a job and one of them builds a scaffold which falls down, who is responsible?" asked one member.

Mr. Lovett—"I would say that the employer or contractor is responsible for not insisting that the work be done properly."

"Supposing that the work was carried out under the direction of a foreman?"

Mr. Lovett—"The superintendent or foreman represents the em-

ployer to the men and if a mistake is made, the employer is liable. He should see that his superintendent or foreman are men interested in safety."

"What if a foreman leaves you for insisting on this?"

"Better have a man leave than that an accident should result from neglect or oversight and a man be killed. A foreman should always insist on safety before the work is started," concluded Mr. Lovett.

Insurance as Applied to the Lumber Industry

E. D. Hardy, of Ottawa, addressed the retail lumbermen on the subject of fire insurance, in which he dealt with various phases of the question in a clear and convincing manner, and spoke more particularly with respect to insurance on mills and yards. He pointed out the value of co-operation as expressed through the association idea and added that they had an evidence of it before them in the large and representative gathering on the present occasion. Such a movement lent itself to fellowship and the attainment of results not possible through isolated effort. The value and importance of co-operation in United States lumbering circles which had given birth many years ago to mutual insurance.

After outlining the advantages of co-operation in the lumber business, in war and in fire insurance, Mr. Hardy touched briefly on the

E. D. Hardy, Ottawa,
Who has made a thorough study of the
different phases of insurance

history of mutual insurance. The oldest company in existence was a mutual, and he contrasted the experiences of mutual companies and private companies. He declared that fire insurance depended for its existence on fire waste. In its simplest form insurance provides a means for relieving the misfortune of individuals and is purely mutual in character. Only when insurance fell into the hands of private interests did the fundamental principle of mutuality become obscured.

In the operation of private insurance companies the premiums cover the losses, expenses of management and administration, and the profits to shareholders. He dealt with the expensive management of many such companies, and referred to the large profits which went to shareholders. The prevention of fire was not the business of private companies, and policy holders were often indifferent on many points. The result was that fire waste was unchecked, and a high insurance cost resulted.

The wastage caused by fire was receiving greater attention today than ever and federal and provincial governments were taking the matter up in order to reduce losses and check the ravages of flames. An important meeting had been held in Toronto during the past few days, being called at the instance of Premier Hearst, and there had been formed in the province a Fire Prevention League. The object was to prevent the destruction of the resources of the province through forest fires and to carry on educational work.

Mr. Hardy, who is attorney for the Canadian Lumbermen's In-

surance Exchange, next took up the expansion of the mutual insurance idea in modern times, and said there were 223 mutual companies operating in Canada. These were divided into three classes—the local or county (mostly consisting of farmers' mutuals), the provincial or state mutuals, and the trade or manufacturers mutuals. There were included in the latter the factory mutuals and the lumber mutuals. The experience of factory mutuals had been most satisfactory, several notable examples being furnished by the speaker. The origin, plan of operation, assessment, liability and elimination of the conflagration hazard of lumber mutuals were dwelt upon and the difference explained between mutuals and inter insurers. Many advantages resulted to lumbermen from the mutual insurance organizations in the way of a better understanding of the needs of the insured and in lower insurance costs.

The result of every insurance investigation showed that the premiums can never be less than the losses, and that fire prevention and a reduction of fire waste are the only remedies. Mutual insurance lent itself to the elimination of fires by giving an incentive to the insured to prevent losses in individual cases, and thus lessens the rate. The Canadian Lumbermen's Insurance Exchange had been organized on the inter insurance plan, and had made steady progress. The mutual insurance idea, as applied to the lumber industry, had led to a better understanding between lumbermen and the general principles of insurance. There was no mystery or secrecy about the rates, which were an open book and in the checking of fire losses, the lumbermen had reaped the benefit of reduced rates. The Lumbermen's Insurance Exchange had reached its present exalted stage without making a single assessment on its members, which was a most gratifying showing. It provided fire insurance to lumbermen at actual cost. In conclusion the speaker expressed his best wishes for the success and expansion of the Ontario Retail Lumber Dealers' Association, and advised them all to increase their protection to cover present values.

Uniform Terms of Sale in Retail Yards

One of the most interesting discussions which took place at the special general meeting of the Ontario Retail Lumber Dealers Association was on the question of "terms of sale." The resolution adopted which is published in another column emphasized that the "terms of sale" for the province be net cash with ledger accounts carried only with people of absolutely approved credit and who agree to pay each month's account in net cash on or before the tenth of the following month.

Walter C. Laidlaw stated that it was desirable to have uniformity of terms throughout the trade as far as possible. Owing to the increased cost of doing business, the heavy sums invested in material and equipment, and the fact that the retail lumbermen was selling on a small margin—much smaller than many other trades—it was impossible to give credit or a discount, and furnish an efficient service. The trade in Toronto had adopted the principle laid down in the resolution and good results had accrued. Eight per cent, was charged on overdue accounts. The object should be to get as near to the net cash basis as possible by eliminating all discounts and abolishing open accounts. The retail lumberman had to carry his stock a long time and distribute it in small lots and it was necessary owing to the small profit earned to secure prompt payment. He favored a general adoption of the terms laid down in the resolution.

A member from Western Ontario pointed out that he had a class of customers who paid on the spot while there were others, mostly farmers,—who were perfectly good but they held off settlement as long as possible. When pressed for payment they handed over the money. The man who settled there and then should, if there were any favors going, receive better consideration than the customer who hung back and did not "come across" until urged to do so, although such a patron might be financially O. K. The trouble was to cut out credit. Would a two per cent, reduction result in getting a check from customers who were good yet delayed paying and could the retail lumberman afford to throw off two per cent for cash? The contractors were also looking for special rebates. He thought the question should be carefully weighed from all sides as well as in its application to different cities and towns.

Mr. Laidlaw pointed out that if eight per cent, interest was charged on overdue accounts it would even up matters like those referred to.

Another member stated that he added eight per cent, interest on all accounts after two months' time and, when notified that such a levy would be made, he generally found a customer came right in

and settled. Any man should be able to pay his account within two months except under very extraordinary circumstances.

A dealer from the east remarked that when an account was rendered by him he stated in a letter if it was not convenient to send a cheque covering the amount, to please sign the enclosed note bearing eight per cent. interest. This plan he had found worked out satisfactorily and eliminated the credit evils.

It was suggested in the course of the discussion that the method proposed in the resolution was a very good one but a large customer should be given until the fifteenth or twentieth of the following month in order to get all his bills in and checked up. The tenth of the month following was too short in many cases.

A delegate from Hamilton stated that legitimate builders and contractors in that city were given a discount of ten per cent, as it was considered the volume of business done by such men entitled them to this concession. Their trade was worth more than that of the small man, the plan, it was asserted, had worked out all right in Hamilton.

"How long do you extend the ten per cent over?" was asked, to which the reply was made, "Until the fifteenth of the following month."

One delegate added that the ten per cent. to contractors might work out all right in Hamilton, but it would never do in his town. It would result in dissatisfaction. A contractor would say to a customer "Let me buy this material for you," and instead of a regular price being obtained from private parties, contractors would be doing the purchasing in order to get the rake off. The private customer would soon get onto the concession and ask for like terms.

A letter was read which had been sent out by the builders and carpenters in London requesting the dealers in that city to give them a ten per cent. reduction. It was pointed out that the arguments submitted by the petitioners were weak and illogical and that the contractor should be able to make a profit on his work and not expect one from the retail lumberman. At the close prices which retail dealers were selling building material to-day, there was no room for a discount. The cash plan was the only one and the habit of giving concessions to carpenters and contractors was condemned.

A Guleph delegate said that, in his city, no discounts were given to any one. When a farmer came to the yard and took away what lumber he bought he was allowed fifty cents per thousand feet, off for carting, and five cents a square off shingles. In the city no charge was made for delivery of goods. One man was not sold cheaper than another and the contractor had to make his profit out of his own work and not out of the lumber merchant after a reasonable time had elapsed if a customer did not settle he was informed that he would have to pay interest on his account.

"We let it be known that we sell for cash and if a member does not settle after receiving his account the second time, we add interest at the rate of seven per cent. until adjustment is made. We do not believe in a bonus to carpenters or contractors and are of the opinion that everything should be done straight and above board and that there should be no special terms. There is no reason why farmers cannot pay cash. They have more money now than they ever had and why should the retail lumberman carry their accounts, with out interest in case they fail to settle?" declared another lumber dealer. "If a contractor is allowed a special discount he gets after all the consumers possible and wants to do their buying and soon the rebate is desired all around."

"We find that when we take a customer's note it is frequently not paid when due and we have to go to the bank ourselves to protect the paper. They are using us as their bankers," said another speaker, who unhesitatingly declared for the spot cash basis.

It was stated that in Windsor an extra charge is made for overdue accounts which is equivalent to allowing a discount.

A Northwestern Ontario visitor thought it might not be possible to institute the new terms at once but that signs should be printed and hung up in their offices and the public educated by degrees to the new state of affairs. It was finally decided that every effort should be made to live up to the new "terms of sale" and active steps taken in every centre to enlarge the membership of the association in every city, town and village so as to give greater strength and support to the cash system of selling lumber.

The resolution was unanimously carried at the close of the interesting and animated discussion. Copies will be printed and sent out by the secretary to the various members to hang up in their offices.

The St. John Shipbuilding Company Ltd., Chicago, Ill., have awarded a contract for the erection of a shipbuilding plant at St. John, N. B. The manager is Mr. Thomas Nagle and the engineer Mr. Frank D. Chase.

Legislation and Transportation Matters

The report of the Committee on Legislation and Transportation was presented by E. M. Barrett, of Ottawa, chairman of the committee. The report was a long one, dealing thoroughly with all matters of legislation that have come up during the past year and particularly the amendments to the Mechanics' Lien Act. It also related to transportation problems, the effect of the increased freight rates and the outlook for shipping generally. Mr. Barrett stated that he was glad to be able to announce in the report that, according to information received, they might hope for an improvement in the car supply during the coming winter. I understand that the Dominion Board of Railway Commissioners intend to see that the shipment of grain from the prairies to the seaboard is handled in the most expeditious manner possible and that as a result the lumber trade could count upon a reduction in the car shortage.

It was also suggested that some relief should be afforded to the Dominion Board of Railway Commissioners which body it was pointed out is greatly overworked. The report concluded:—"We believe that it will be necessary at an early date to relieve the Dominion Board of Railway Commissioners of some of the daily work, possibly by the creation of provincial boards. At the present time it would appear that the government have only time to hear the arguments of the railways and it is a difficult matter for the public to present their side of the case. Nevertheless the lumbermen should have representation before the Commission; their interests should be protected at all times."

The full text on Legislation and Transportation is held over until the next issue of the "Canada Lumberman," owing to pressure of other matter.

Some Echoes of the Convention.

There were delegates present from the extreme eastern and western parts of the province, Ottawa sending a particularly large body, while Windsor was well represented.

John B. Reid, the orator of the retail ranks, deserves much credit for the splendid work he did in seeing that the delegates were heartily welcomed at the exhibition and shown every courtesy. Mr. Reid is an exponent in the gospel of good cheer and co-operation under all circumstances.

The committee on resolutions did particularly well and the amount of business which was transacted during the day reflects credit upon the methods and ability of the members.

The annual meeting of the Association will be held in Toronto during February next, when officers for the coming year will be elected.

Secretary Boulton was authorized to attend the second annual gathering of the National Retail Lumber Dealers Association in Chicago. A motion to this effect was unanimously carried. The convention which was announced to take place on September 11th and 12th has been postponed until September 18th and 19th, owing to the date set by Government officials for draft registration, interfering with the days originally set. It is expected there will be a large attendance as extremely important matters are to come up.

The Committee on Resolutions, which had a great deal of work to attend to, was composed of H. A. L. Swan, Ottawa, Chairman; B. F. Clarke of Glencoe, and Allan S. Nicholson of Burlington.

Those seated at the head table at the banquet tendered the visiting retailers at the Royal Canadian Yacht Club, were A. E. Clark, chairman, A. C. Manbert, Toronto; Major J. E. L. Streight, Islington, T. A. Russell, President of the Canadian National Exhibition, Toronto, Frank Hawkins, secretary of the Canadian Lumbermen's Association, Ottawa; C. R. Robertson, E. M. Barrett, A. G. Rose, H. A. L. Swan, Ottawa, T. E. Rathbone, Toronto, J. B. Reid, Toronto, W. M. Tupling, Orillia, B. F. Clarke, Glencoe, W. J. Aitchison, Hamilton, and H. Boulton, secretary of the Ontario Retail Lumber Dealers Association, Toronto.

The dinner committee of the Wholesale Lumber Dealers Association was composed of A. K. Johnson (chairman), W. Frank Oliver, and Walter C. Laidlaw. They did their work admirably and everything was carried out in a most satisfactory manner.

The War Tango, the sixth of the six-vessel contract on which the Western Canada Shipyards has been working, has been successfully launched.

The French interests have awarded a contract to the William Lyall Shipbuilding Company Ltd., North Vancouver, B.C., for 8 twin screw vessels. The manager is Mr. W. S. D. Cook.

Important Resolutions Adopted by the Retail Lumbermen.

The following resolutions were carried at the gathering of the Ontario Retail Lumber Dealers Association:—

The Annual Convention.

Moved by T. A. Paterson and seconded by A. G. Rose—that the next Annual Convention of this Association be held in Toronto on a convenient date to be fixed by the Executive Committee some time in February 1919.

Uniform System of Accounting.

Moved by W. M. Tupling and seconded by B. F. Clarke:—In view of the action of the Canadian Government and also the United States Government in fixing prices on certain commodities based on a study of costs plus a small margin of profit. And Whereas there is a serious lack of uniformity among retail lumber dealers in their method of arriving at their cost of doing business which might result in the Government fixing prices based on costs that did not include all actual costs. Be it Resolved that this Association favors the adoption of a simple uniform system of accounting and of figuring costs in the retail lumber trade; and that the members of the Association be asked to assist the Secretary in compiling data on this subject by completing the forms which have been sent to them on the subject.

Looking After Lumbermen's Interests.

Moved by E. M. Barrett, and seconded by A. S. Nicholson:—In view of the many matters of vital interest to Retail Lumbermen coming up from time to time in the Federal or Provincial Parliament, and in the Dominion Board of Railway Commissioners; relating to business assessment, increased freight rates the bankruptcy act, etc., be it resolved that this Association appoint a representative, capable of looking after their interests as required, such representative to be the Secretary of the Association.

Purchasing From Wholesalers.

Moved by W. J. Aitchison, Hamilton, and seconded by J. B. Belshaw:—Resolved that we consider it to our mutual advantage to purchase, when possible, from wholesalers who patronize our Monthly Bulletin by advertising therein.

Collecting Data on Assessments.

Moved by Guy H. Long and seconded by G. W. Boake:—Resolved that this Association appoint a committee to wait upon the Workmen's Compensation Board with a view to collecting data as to variations in assessment. This seems necessary when it is known that the lumbermen are assessed \$2.00, the same as blast furnaces and that furniture manufacturers are assessed \$1.30, teamsters \$1.20, etc.

Publication Committee Appointed.

Moved by E. C. Russell and seconded by W. M. Tupling:—Resolved that a Publication Committee should be appointed to co-operate with the Secretary in the publication of the Monthly Bulletin, as the organ representing the retail lumber dealers of Ontario.

Legislation Committee Praised.

Moved by Jas. Harrison and seconded by W. T. Piggott:—Resolved that this association express their appreciation of the work accomplished by our Legislation Committee and heartily endorse the proposals which they have submitted.

Publication of Retail Prices.

Moved by E. C. Russell and seconded by W. M. Tupling:—Resolved that we approve of the publication in the Monthly Bulletin of the retail lumber prices current in various parts of the province representing and recommend that this price list be enlarged so as to include more items.

Organization of Local Groups.

Moved by A. Ludlam and seconded by W. M. Tupling:—Resolved that we approve of the organization of our members into smaller local groups with the object of having more frequent meetings together among members whose interests are allied and that the Secretary co-operate with the members in any district in the organization of these groups.

Getting in New Members.

Moved by B. F. Clarke and seconded by A. S. Nicholson:—Resolved that we recognize the importance of having this association represent as nearly as possible the entire retail lumber industry in Ontario and that each member should make it a point to endeavor to secure new members wherever possible.

Fiscal Year of the Association.

Moved by B. F. Clarke and seconded by J. C. Scofield:—Resolved that the Fiscal Year of the Association shall end on December 31st of each.

Cash is the Basis of Sales.

Moved by J. C. Scofield and seconded by E. M. Barrett:—Whereas the retail lumber dealer must buy his lumber in car lots, carry for a considerable period and distribute in small lots to his customers. And whereas the amount of capital required in the retail lumber business is now so large. And whereas the public is continually demanding increased service from the retail yards. Be it resolved that the "Terms of Sales" in the retail lumber business in the Province of Ontario should be net cash, with ledger accounts carried only with people of absolutely approved credit and who agree to pay each month's account in net cash on or before the tenth of the following month.

Buy From Those Who Co-operate.

Moved by W. M. Tupling and seconded by J. C. Scofield:—Whereas the officers of the Ontario Retail Lumber Dealers Association by untiring effort have succeeded in securing many deferred shipments of orders given by our members, in some cases on orders placed two years or more prior to this date, and fearing that there may come to the attention of our officers cases where our members may cancel orders by reason of market decline or otherwise; therefore in order to further strengthen our officers' position, we hereby resolve that The Ontario Retail Lumber Dealers Association, through its Secretary, ask all its members to support it by buying their stocks from such manufacturers and wholesalers who have and will show a spirit of co-operation with our Association in its effort for square dealings between ourselves, manufacturers, wholesalers and customers.

Desirability of Uniform Sizes.

Moved by C. A. Storey, and seconded by E. C. Russell:—Whereas this Association recognizes the desirability of uniform sizes for millwork and the importance of instructing architects and the general public in regard to regular standard sizes. Therefore, be it resolved that this convention consider the adoption of standard sizes. Later it was decided that the matter of regular standard sizes be left with each district to deal with.

Book of Standard Plans.

Moved by J. C. Scofield and seconded by B. F. Clarke:—Resolved that this Association recommend the appointment of a Committee to consider the advisability of getting out a set of plans, in book form, showing standard barns, outbuildings and garages, same to be furnished our members at cost. This resolution was referred to the President and Secretary with instructions to appoint a plan book committee.

Extension of the Credit Service.

Moved by J. C. Scofield and seconded by A. S. Nicholson:—Resolved that in view of the excellent results obtained by the Local Credit Bureaus, where established, action should be taken to organize this service in the unorganized districts. Further resolved that a Central Credit Bureau be established where all information concerning credits will be obtainable by members of the Ontario Retail Lumber Dealers Association. It was moved by W. C. Laidlaw and seconded by Geo. Belton that this be referred to the Executive Committee.

Social Side of Ontario Retailers' Gathering

Visitors Entertained to Enjoyable Dinner By Wholesale Lumber Dealers—How Association and Co-operation Have Improved Trade Relations

One of the most outstanding social functions in the lumber industry of Toronto took place Tuesday evening, September 3rd, when the delegates to the special general meeting of the Ontario Retail Lumber Dealers' Association were entertained to dinner at the Royal Canadian Yacht Club, Toronto, by the Wholesale Lumber Dealers' Association, Inc.

There was an attendance of over 200 representatives of the wholesale and retail trade, nearly every firm being represented. The proceedings were characterized by a spirit of good will and friendship, which evidences the kindly relations existing between the wholesale and retail branches of the great Canadian industry. The dinner provided was tempting and an admirably served one, while the artistic grounds and attractive appointments of the club house were a source of delight.

Alfred E. Clark, chairman of the Wholesale Lumber Dealers' Association, ably presided, and after ample attention had been bestowed on the prandial delicacies the toast to "The King" was loyally honored. In directing the proceedings Mr. Clark extended a cordial welcome to the visitors, and said the presence of the wholesalers and retailers around the same festive board demonstrated that association had led to better relations. During the past few years those engaged in the lumber business had come through very serious situations, and had to face many difficulties. The manufacturer had been up against the shortage of labor as well as the retail lumberman. As high as \$75 a month and board was being offered to secure labor for the woods, and they would all agree that this was some item. Owing to the inferior quality of the help procurable no lumberman could figure out how many men it would take to do the work or what the output would cost him. Labor was a most unsatisfactory problem with which to reckon. The matter of definitely establishing costs presents a perplexing problem not only to the manufacturers, but to the wholesalers and retailers as well. This was only one phase of the situation and there were many others upon which he could enlarge did time permit. Mr. Clark hoped that they would all spend a pleasant evening and said that it afforded him much pleasure to propose the toast of "Our Guests." This was enthusiastically received and Thomas Patterson, President of the Ontario Retail Lumber Dealers' Association, amid cheers and the old refrain "For He's a Jolly Good Fellow," responded on behalf of that organization.

Mr. Patterson modestly disclaimed any pretensions to oratorical ability and briefly referred to the progress of the association. He said that they had just held their first convention and had enjoyed a most instructive time. Their membership was already over 130 and they were looking forward to increasing this number considerably during the coming year. "We appreciate," concluded Mr. Patterson, "the hospitality of the wholesalers and, on behalf of the retailers of this province I thank you sincerely for your kindness, and we hope that the pleasant relations now prevailing between the wholesalers and ourselves may continue. I also desire to express our gratitude to the Toronto retailers for the luncheon tendered us during the day."

T. A. Russell, president of the Canadian National Exhibition, who was introduced as the "busiest man in Toronto during the progress of the Big Fair," was cordially received. He stated that he had been forced to make more speeches within the last seven days than he had delivered during the previous seven years. It has been said that a wise man knew everything about something and something about everything, and in paying a visit to the exhibition, the lumbermen would see something about every phase of the Canadian industrial, mercantile and national life. The exhibition had many functions to perform, but its outstanding one was educational, and it was the intention of the directors to make it more educational in the future than even in the past. Another lesson which the directors sought to drive home was that of conservation, and many examples were afforded of the economical and effective use of substitutes. In concluding, Mr. Russell called attention to several features of the exhibition which he would like them to visit, and dwelt particularly upon the Soldiers Civil Re-establishment. All should be interested in the efforts to train and equip the returned men, give them employment and afford them the opportunity of becoming good, useful citizens.

Co-operation From Many Standpoints.

The principal speaker of the evening was A. C. Manbert, President of the Canadian General Lumber Company, Toronto, who gave an inspiring and effective address on "Co-operation." In the course

of a decidedly humorous introduction, during which he made some good-natured thrusts at leading officers of the wholesalers and also the retailers associations—references which were both clever and incisive—he aroused much merriment.

Mr. Manbert said he had chosen as his topic some phases of Association work; that from whatever angle viewed—historic, economic, or idealistic—the Association idea presented an interesting study. This Association idea was a perfectly natural expression of man's activities and was, as the scientist would say "in the nature of things." It had been one of the great agencies in human progress, and would ever so continue when rightly used. In the lumber trade little had been done in Association work until comparatively recent times, for obvious reasons. Indeed, it was only in the field of lumber distribution or retailing that the largest opportunity for co-operative work existed. In the purely producing field, eliminating entirely any phases of merchandising or distributing, there is less scope for association work. Lumber production in the restricted sense is essentially a primary industry, conducted in comparative isolation and detachment; its problems are peculiar to the location and to be met individually and arbitrarily. On the other hand, association work depends upon stabilized conditions and constant intercourse and interest. The record of what the Ontario Retailers Association has done in the short time of its existence, and the splendid gathering on this occasion, gave concrete evidence of this fact. Indeed, the avenues for the retailers to travel are so many and various that their enthusiasms were altogether warranted. The only limits are the limits of natural law, and these they must observe. For instance, the ardent Associationist might expect that the Association would hold a cure for all the ills of the trade: the selfish Associationist would seek to invoke the power of the Association for personal advantage of self or other members, quite unmindful of rights of others. Both would be mistaken. An association which projected fantastic schemes of conduct would lose the confidence of its members, while an arrogant assumption of power would stir up destructive opposition. "We must," continued the speaker, "in our Associations interpret our activities in terms of integrity, candor and generosity. For we are living in an age when the conviction of all liberal-minded men runs contrary to the idea that 'Might is Right,' and holds instead that power is a bane and not a blessing when it seeks to impose a selfish determination upon an unwilling neighbor. Let us hold to no purpose of sectional domination or partisan advantage."

Some Timely Suggestions Presented.

Mr. Manbert congratulated the Association upon the effective work which it was doing. He would like to present different suggestions for association work, born out of his experience, but time would not permit. He would, however, like to urge one point for the consideration of the gathering, viz., that they should never get their interests centered on absolute price fixing, sectional or otherwise, because it would ultimately be the undoing of the Association. It might endure for a time, but ultimately it would come to an end. It is easy to understand why this is so. "On a rising market price fixing is a stimulating adventure. Self-interest grasps opportunity, and none would be a laggard in the race. But on a dull or declining market this same self-interest will dictate otherwise and individual interests will run counter to the will of the majority. Then exit agreement, trade confidence, association—all that has been built up." A discussion of costs would show the members what the prices ought to be and is legitimate and based on common sense. If a retailer properly understood what his costs were, the matter of prices would take care of itself. Some of the strongest associations in other trades rest upon the idea of cost discussion; other associations are doing good work under the open price system, in which method all sales and prices obtained were published to the members. He hoped that this idea might be developed in this Association as was suitable to the various situations. "We have lived so long," he continued, "in the idea of a cloistered secrecy about our own individual business, that to many of us this idea will sound like a dreamer's fancy, but the old order changeth, and this old world of ours is trying hard to learn to be frank and fair with self and neighbor."

Mr. Manbert said he wished particularly to supplement the chairman's greetings of cordial goodwill from the wholesalers to the retailers. In abnormal times like these, when sources of supply are uncertain, prices constantly shifting and general conditions unstable,

differences may arise between individual retailers and wholesalers, but fundamentally their interests join and are inseparable. Said he: "When you have poor business, we have poor business. We wholesalers want strong customers. You want reliable sources of supply. Your strength is our strength; your weaknesses are our weaknesses." In this he referred less to their financial standing and more to their methods, their attitude, their character. For this reason wholesalers needed the Retailers Association as much as they needed their own, and for its fraternities, its stimulus, its exaltations.

Mr. Manbert continued: 'Physicologists roughly class men in their inspirational tendencies as idealists and realists. In the extreme neither is an entirely sane attitude. The well-rounded man must be a blending of both. We must project our activities in the idealism of common rights: we must test them in the realism of common sense. Self-interest must be tempered with altruism. We lumbermen vaunt our practicalities; let us not so vaunt it that we lose our vision, for 'if they have no vision the people perish.' For it is all in a day's work, and the lives of most of us are so hedged about by the doing of common tasks that the most we can ask, and the least we can ask, is that they shall be helps to make the day's work better. You all remember the prayer of the immortal Stevenson:

To be honest;

To be kind;

To earn a little, and to spend a little less;

To make upon the whole a family happier for his presence;

To renounce when that shall be necessary and not be embittered;

To have a few friends, and these without capitulation; above all, on the same grim condition, to keep friends with himself;

Here is a task for that a man hath of fortitude and delicacy!

In concluding an admirable address, which was followed with the closest interest (and of which the foregoing is only a brief outline) Mr. Manbert declared that we all could play a part by being good and fair minded citizens. Although we might not "march to martial strains" in the world struggle for liberty and civilization, we could all be men and soldiers of the common good. Every one could do his share in upholding the honor and nobility of mankind in life's great battle. For he spoke truly who said:

Be noble! and the nobleness that lies in other men, sleeping, but never dead, shall rise in majesty to meet thine own!"

Lumberman's Life as Prisoner in Germany

Major J. E. L. Streight, of Islington, who is a popular retailer and military man, captaining the first 200 men who left Toronto at

the outbreak of European hostilities, thrilled all by his recital of his experiences as a prisoner in Germany for three years. He told stories of the cruelty, treachery, arrogance and domination of the Hun that were almost incredible. Along with several other Canadians Major Streight was taken captive after the battle of St. Julien. The diabolical treatment which he received, his desperate attempts to escape by leaping from a train going at what he said appeared to be a speed of 40 miles an hour, and how he was set upon, his jaw broken and his face smashed by German sentries just as he was about to cross the boundary line into Holland and his subsequent confinement for many months in a dark cell were modestly but graphically related. The food that was handed out to him was unfit for human consumption, while his narrative of insults and iniquities was vibrant with incident, life and excitement. Major Streight recounted how Belgian men and women who sought to give Canadian prisoners a word of cheer were shot down in cold blood, and described the terrible hunger and suffering in Germany, where, in some sections at least, the gravest state of affairs prevails. Major Streight did not have time to go into all the details of many hair-raising and thrilling adventures while in the hands of the Germans, but he enumerated sufficient to show the stern stuff of which he and other Canadians are made. From his experiences in the war, Major Streight reverted to some of the many kindnesses received from his home people on his recent return and advised retailers when they found a reliable wholesaler to stick by him. He had been doing business with the same wholesalers for the last ten years and during the four years he was overseas the same pleasant and satisfactory relations had been maintained by those in charge of his yard. He spoke of the timber wealth of Saxony, one-third of the land being covered by forests. Much lumber had been cut by the mills which were rather small as compared with some of our own. All the forests were owned by the state and constant reforestation was going on. The principal woods were spruce, red and jack pine and soft woods in general.

This concluded the speech making and the visitors returned to the city shortly after 11 o'clock on the steamer Hiawatha. During the evening many choruses and patriotic songs were sung, song sheets being distributed. Stirring vocal solos by Duncan Cowan and James Milne were much appreciated, while Chas. E. Musgrave ably presided at the piano. Rather an unusual, but decidedly interesting item on the programme were some clever feats of magic performed by Ed. Balfour. On the whole, the entertainment features and speeches were just a little ahead of anything that has ever been attempted in this line, everything passing off pleasantly and profitably.

DELEGATES TO THE REPRESENTATIVE GATHERING

The following is a list of the retail lumber dealers who were in attendance at the meeting:—

W. J. Aitchison; D. Aitchison & Co., Hamilton.
F. R. Anglin, S. Anglin & Co; Kingston.
A. Bailey, A. & W. J. Bailey; Hagersville.
G. H. M. Baker, Baker Lumber Co.; Lindsay.
E. M. Barrett, Barrett Bros.; Ottawa.
J. B. Belshaw, J. T. Belshaw & Son; Stirling, Ont.
Chester H. Belton, R. Laidlaw Co.; Sarnia.
George H. Belton, George H. Belton Lumber Co.; London.
G. W. Boake, Boake Mfg. Co.; Toronto.
J. S. Bond, Batts Ltd.; Toronto.
F. X. E. Boucher, Boucher Bros.; Hull, P. Q.
Frank A. Bowden, Frank A. Bowden & Sons, Ltd.; Toronto.
F. W. Bryan, The Bryan Mfg. Co.; Collingwood.
John D. Campbell; Cornwall, Ont.
P. L. Canfield, R. E. Butler Lumber Co.; Woodstock.
B. F. Clarke, McPherson & Clarke; Glencoe.
George Clendenan; Clarksburg, Ont.
C. L. Coates, A. Coates & Sons; Burlington.
G. P. Davidson, James Davidson's Sons; Ottawa.
A. M. Davis, McAuliffe-Davis Lumber Co.; Ottawa.
James S. Dewar; Paisley.
A. Dick, R. Laidlaw Lumber Co.; Toronto.
S. Diver, C. & J. Hadley Co.; Chatham.
P. J. Dixon, Unionville.
R. G. Dryden, Toronto.
D. Kemp Edwards, George M. Mason Ltd.; Ottawa.
A. O. Fisher, R. Laidlaw Lumber Co.; Barrie.
J. E. Fothergill, Consumers Lumber Co.; Hamilton.
James Free, Mimico.
T. Gardiner, Galt.
W. C. Gardiner, The Builders' Moulding Co., Ltd.; Toronto.

C. Schmidt, R. Laidlaw Lumber Co.; Toronto.
 J. C. Scofield, Windsor Lumber Co.; and McLean Lumber Co.; Windsor.
 C. A. Storey, McLaren Lumber Co., Ltd.; Brockville.
 A. E. Summers, Mallorytown.
 Chas. Taylor, Drumbo.
 C. H. Taylor, Hamilton Lumber & Coal Co.; Hamilton.
 E. Taylor, Paris.
 W. B. Tennant, John B. Smith & Sons; Toronto.
 W. H. Thomson, Thomson Bros.; Port Credit.
 W. M. Tupling, J. R. Eaton & Sons; Orillia.
 F. Villeneuve, Walkerville.
 John T. Wallace, Dymont, Baker Lumber Co.; London.
 Allan Watt, Watt Milling & Feed Co.; Toronto.
 W. Williamson, Toronto.

Others who attended the meeting included H. A. L. Swan, Secretary-Treasurer of the Ottawa Lumbermen's Credit Bureau, Ottawa; E. D. Hardy, of the Canadian Lumbermen's Insurance Exchange, Ottawa; G. B. VanBlaricom, Editor of the Canada Lumberman, Toronto, and Phillips Thompson, representing the Lumber Trade Journal of New York.

Eastern Lumber Cut Will Be Smaller

Much Will Depend on Labor Problem—Maine Operators Intend To Curtail Their Activities.

Whether or not the lumber cut in the Province of New Brunswick will be as large this winter as last depends on the labor problem. From present indications the cut will be much smaller owing to the fact that large numbers of lumber jacks have been drafted into the Canadian army, while others have been lured west by the exceptionally high prices offered for their services. Some operators in the province, who have holdings in Maine, feel optimistic regarding their chances for the winter cut because of the fact that many Maine operators intend to curtail their activities for the duration of the war, or until market conditions become more attractive. This will mean that some men will be available from their crews and, augmented by others from the regular gangs in N. B., they are expected to be put felling the large timber. A problem which confronts operators in New Brunswick, regarding getting labor into Maine, is at present being taken up at Ottawa, and before the season commences it is hoped to have obstacles removed so as to permit their passage across the border without any official interference.

While it is a little early as yet to say what figure will be paid men in the woods this coming winter it is predicted that experienced men will get \$60 and "found." As much depends upon the individual it is almost impossible to quote any rate. There is no doubt, however, that wages will be higher than last year because of the scarcity of men, and also because of wages paid in other lines having advanced.

Speaking of the pulpwood situation in New Brunswick one of the leading operators said that a report current that there is more wood piled along the Canadian Government Railway that will be shipped out in the next year and a half is not correct. He said there is much less than last year and only a small amount in comparison with other years.

At a session of the Provincial Government of New Brunswick, held in St. John on September 5th, a delegation from the Lumbermen's Association waited on them and discussed matters pertaining to the lumber industry and the conservation and preservation of the woodlands of the province. Another matter which they discussed to some length was the scaling and the best methods to adopt regarding the same. The lumbermen advocated an individual piece scale by competent scalers as the only means by which justice could be done to the province and the operators. If this method is adopted the operator would pay stumpage for his entire cut and no question of "holding out" could possibly be raised. The government promised consideration of the proposal. The delegation included W. B. Snowball, James Robinson, Garfield White, Donald Fraser and F. C. Beatey, some of the largest and most influential lumbermen in the province.

The lumber mill of J. A. Gregory, which is situated at South Bay on the St. John river, commenced operation on September 5. The owner plans on keeping this mill running until the river freezes.

A big steam sawmill at Stanley, N.B., owned by Stanley Douglas, was destroyed by fire recently and involved a heavy loss. The mill was of the most modern type and was well equipped. Mr. Douglas's loss is severe because of the fact that he lost nearly a quarter of a million feet of lumber in the freshet last spring.

A notice was recently sent throughout the Province of New Brunswick notifying all those interested that the sale of expired timber licenses, as advertised in the Royal Gazette and embracing in all four hundred and fourteen and one-half square miles, would not take place.

Samuel R. Likely of Tacoma, Wash., arrived in New Brunswick a few days ago and is now in a training camp in Nova Scotia, having enlisted in the British Army. He is assigned to the Officers' Training Corps. He is interested in mills in Walla Walla, Washington, and also in a mill in New Westminster, British Columbia.

A few weeks ago an appeal for lumber jacks was made on behalf

of the western provinces and in a couple of days one hundred men from New Brunswick were ready to start for the West. Some time later word was received that they had arrived safely at Prince Rupert, and were going from there to Queen Charlotte Islands to fell the large spruce trees which, it is said, will be used for aeroplane manufacture.

New Lumber Company Organized

The L. & H. Lumber Company Inc., have succeeded to the business of Herbert F. Hunter, Boston, Mass. The offices of the organization are located at 77 Kilby Street, Boston, while mills are operated at North Vernon, Ind., and at Irasburg, Vt. Wm. E. Litchfield is the president of the new corporation, Herbert F. Hunter, treasurer, and Arthur N. Moore, secretary. Mr. Litchfield is a former president of the Massachusetts Wholesale Lumber Association, and Mr. Moore is the present secretary of that body. Along with Mr. Hunter, they make a strong and aggressive firm, all the members having been prominently identified with the trade for years. The L. & H. Lumber Company will buy and sell largely in Canada. By their new association in business they will possess greater purchasing ability and facilities for increasing the extent of their activities. The L. & H. Lumber Company are in the market at the present time for hardwoods, No. 1 and 2 common, and are advertising to buy in Canada maple squares, 8 feet and longer, maple, birch and basswood, as well as dimension spruce, hemlock and factory flooring. The firm also announce that they are in a position to sell in the Dominion some softwoods and Philippine mahogany.

Newsy Briefs of Timely Interest

The monthly meeting of the Wholesale Lumber Dealers Association, Inc., which were suspended for the summer months, will be resumed this month. The first fall gathering will be at the Queen's hotel, Toronto, on Friday evening, September 20th, when the members will enjoy a dinner and afterwards attend to several important matters awaiting decision.

A party of some fifty well known capitalists of the United States and Canada were recently the guests of the Canadian Export Paper Co. of Montreal, and were taken for a trip down the St. Lawrence and Saguenay rivers on the steamer "Saguenay" of the Canada Steamship lines. The visitors inspected the pulp mills of Price Bros. and Co. at Jonquiere.

John Sherbinin, manager of the Slocan Valley Lumber Co., Nelson, N.B., of which Terry and Gordon, Toronto, are the eastern representatives, paid a business visit to Toronto and other points during the past few days.

Robert Bury & Co. (Canada), have removed their offices from 455 King St., west, Toronto, to the premises formerly occupied by the Wilson Lumber Co. at the foot of Spadina Ave., whose interests were taken over by them some time ago. The new offices have been greatly improved and admirably fitted up and are adjacent to the Bury yards at the foot of Spadina Ave.

British Columbia Firm is Expanding

R. H. Underhill, Vancouver,

straight cars of shingles, commons, uppers and timbers.

An announcement of interest to the Eastern Canada and prairie lumber trade is made by the Allen-Stoltze Lumber Co., Ltd., of Vancouver, who are manufacturers and shippers of B. C. lumber and shingles. Mr. R. H. Underhill, for the past seven years connected with the Canadian Western Lumber Co., Ltd., Fraser Mills, has joined the Allen-Stoltze firm as manager of their lumber department. Mr. Underhill represented Fraser Mills on the prairies for two years, and travelled for one year in Eastern Canada, and for the past two years has been at Fraser Mills as assistant sales manager. The Allen-Stoltze Co. intend to be represented on the Prairies and in Eastern Canada, and through their excellent mill connections, will be able to supply mixed and

The Cholberg Ship Company Victoria, B. C. have started work on a machine shop, molding loft and office building, costing \$5,000. Work will start immediately on the construction of wooden ships.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Wanted—Slabs and Edgings

Three to five cars. Apply Box 764, Canada Lumberman, Toronto, Ont. 15-18

A. W. STEVENSON,
P. O. Box 2624,
8-t.f. Montreal, Que.

Protect Stock in the Yard

There is often damaged stuff in old piles that have stood too long without repiling. There should be no such old piles in any yard. New lumber is often put on top of a low pile which perhaps has laid there for a year or more. This should be taken out and piled on top of the fresh lumber so as to run it off on the next bill. In this way you will keep reduced the old stock on hand and the whole yard will look better. During the hot weather the piles

should be kept covered with some old boards kept for that purpose. This will prevent a good deal of the warping of the top layer on the pile. Every day before leaving the yard for the night the yard man should go round and turn over what has been warped during the day. By giving a little extra attention to this matter you can avoid having much of the stock getting damaged by the weather and therefore less to bother you in getting rid of.

BELTING FOR SALE

We have a large quantity of Second-Hand Rubber and Leather Belting in all sizes and plys up to 24 inches in width, which we can sell at interesting prices. Send us your requirements.

Review of Current Trade Conditions

Ontario

Conditions have not materially changed in the general lumber situation during the past two weeks. Building appears to be picking up in a number of Ontario towns and cities, and there is considerable repair work in all directions going on which keeps the larger proportion of retail dealers fairly active. At the recent gathering of the Ontario trade held in Toronto, it was learned from interviews with the majority of the delegates that this had a much better season than was expected last spring. Farmers are now commencing to look around for material to put their buildings in shape for the winter. There is a good demand for hemlock of all kinds and prices are well maintained. The requisitions for western stock, particularly boards, shiplap, etc., have been quite active.

In the hardwood market it is a sort of "betwixt and between." While there has been some price cutting in isolated instances, the general trend of the trade is firm, and there are enough enquiries being quietly made to justify the faith of wholesalers that, by no means, will quotations be reduced, although trade is a little quiet at the present time. There has been some sales at a diminished figure. With the resumption of full activities it is expected that factories and large consumers will be purchasing as heavy as ever. A good deal of hardwood is being used in the making of motor trucks, while furniture factories are moderately busy. The great trouble which the manufacturer and wholesaler have to-day is that of definitely determining costs, owing to the perplexing labor problem.

Various companies are now getting ready to operate their winter camps, and while it is reported that considerable help is forthcoming in certain centres, there is a decided shortage in other localities, the reason being that the harvesters' excursions to the West have taken away considerable available labor. Everything points to the fact that the cut this winter will be even less than last season, which will mean a reduction of the output of lumber of all kinds next year, as there are no old logs left over upon which to fall back and make up for the decimated yield in the bush.

Some firms report that the car situation is beginning to get complicated as the time for rushing western wheat to the seaboard approaches. One company stated this week they had more difficulty in getting cars to make shipments during the past ten days than they had during the whole summer. On the whole the lumber situation is at present in a rather transitory condition. Prices are keeping up well, but the demand is not very pronounced during the present month.

In soft wood there is no particular activity, although some good sales are reported. Business in this line has been rather on the quiet side for some time. While a number of sawmills will close down during the present month, others will continue operations for some time. There is a fair amount of shipping going on to the United States. Retail dealers are being strongly urged by wholesalers and manufacturers to order any autumn requirements that they may desire now when distribution may be made and thus avoid the long delays and many vexations of last winter.

The building permits in Toronto for the first eight months of the present year total \$5,772,405, against \$4,938,583 for the same period of last year, an increase of \$834,115. Reports from other cities also show a gain. During the past few days an important meeting of building contractors was held in Toronto. Many large firms were represented. The object of the gathering was to discuss plans for holding a large conference, which will take place later on in Ottawa, at which a permanent organization of the contracting interests of the country may be formed. There was some talk as to whether the builders' supply men should be included in the membership of the proposed association. It was thought that, as builders' supply men are members of various builders' exchanges—and it is hoped to work in conjunction with these local organizations—that they could not be very well left out.

The cut in prices which took place in Ontario recently on B. C. timbers lasted only a short time and figures are once more normal. Owing to the contracts which have been recently placed at the Coast for new ships there is again a good demand for ship timbers. The shingle market is rather quiet, but dealers look for a little flurry later on. There is always an improvement toward the close of the year, and it is expected that lath will also move a little more freely.

United States

An interesting report comes from Washington to the effect that the War Industries Board will place all non essential building under strict government control through the state councils of the defence. Every projected building operation involving more than \$2,500 will be under supervision and no application for such a building permit will be approved at Washington unless it has been first investigated and duly sanctioned by the proper state council.

Another matter that is giving the lumbermen some concern is the coming draft of men up to forty-five years of age and, more particularly, as the administration has not yet declared that the lumber industry is one of national importance and welfare. If such a declaration was made, it would place the men in the saw mills and wood-working plants in the deferred classification list. As it is now, it is feared that many men will quit their jobs and take up work in some other line, where they are protected from the draft to such an extent. A group of southern pine manufacturers has brought this to the attention of the Government, with a request that the industry be declared essential without delay, as the labor situation already is too serious to permit it to drift farther; and if this request was supplemented with requests from manufacturers in other sections of the country, probably it would have the weight of hurrying along such a declaration. There is no question but that the lumber industry is essential, and very much so, or that it eventually will be declared as such; but eventually may be too late to save the lumbermen from much embarrassment and probably costly shutdowns, and the declaration should not be held back, in view of the circumstances.

During the past few weeks there has been great activity in the southern pine industry and much new business has been received by the mills. Some of it is on government account and the remainder is for railroad administration. In the hardwood line activities are confined principally to government war requirements.

There still are some manufacturers who offer lumber at prices out of proportion with production costs and who therefore disturb the markets more or less. These manufacturers are those operating very small plants, who began cutting a few months ago on a rising market when everything looked exceedingly propitious to them. There are many of them, and as they all started operations at the same time all their lumber likewise reached a dry state at the same time, and when they were ready to ship the trade suddenly began to hold back, having loaded up with ample stocks prior to the freight advance. Alarm resulted, and instead of awaiting sales en bloc, as usual, these little fellows began feverishly to poke around to find jobbers willing to accept bargains, and many of these seized the advantageous chance to stock up at the low prices the operators offered in their panic, and resultant competition among the jobbers caused still lower prices. Naturally prices on the general market have begun to feel a reaction as a result of this; but practically the entire body of important manufacturers calmly stand aside and await with confidence the exhaustion of these low-priced offerings. These small mill stocks, while of course large enough to cause temporary disturbance, are not large enough to fill more than an infinitesimal part of the demand, and therefore the larger manufacturers should soon regain control of the situation, and if their courage holds up and there is no weakening prices on southern hardwoods should again attain their previous or even higher levels within the next month or two.

In taking a survey of the current lumber trade generally the "American Lumberman" says: "Great commercial activity would prevail throughout the country were it not for the imperative war requirements, for considerable business is offering and consumption requirements are heavy, but supplies for regular channels of trade are light, they being converted more and more into war supplies. The Government is pressing harder and harder for larger supplies of essential character. Manufacturers having goods available for public consumption select their customers, and retailers find it hard to carry sizable stocks because of high prices and inability to secure full credit facilities. The public tendency is to buy goods only as absolutely needed, the future being uncertain enough to cause charyness. Some sections of the country, however, are more cheerful than others, the South, North and Northwest being especially optimistic, this probably due to improved crop conditions in those sections."

Great Britain

Owing to the restrictions in selling and the shortness of supplies, there is no change in the general condition of the timber trade. Latest

reports are to the effect that trading is conducted in a very desultory manner, and there are very small arrivals of American hardwoods. There is still some timber coming in for work of national importance, but very little for private trading. Before the timber trade can regain its former position, many valuable cargoes will have to arrive. Oak, both quartered and plain, poplar, red and sap gum are needed to satisfy the wants of private consumption and, in the meantime, the trade is marking time awaiting the dawn of peace and future action by the timber controller. Then too, much depends on the labor situation and what proportion of men will be released from the army obligations, more particularly skilled hands. The shipyards will absorb some of the discharged men and this will benefit the timber trade, as large quantities of material will be used in the fitting out of vessels of every description. Other trades will also press their demands for wood of very kind, and it is expected there will be a revival in the whole lumber business, which, for over four years now, has been upset very much by the exigencies of the war.

There is not much doing in the home-grown timber line. Word from Manchester states that the timber trade is getting stale and that many firms will make a poor showing at the end of the year. The way that wages have gone up, especially in aeroplane factories, is declared to be nothing less than a scandal. It is suggested that it is time that an inquiry was started regarding the methods adopted, and that it is no wonder that men in other places are dissatisfied.

Saying that "Rationing Must be Made a Success," the "Timber Trades Journal," in a recent issue, asserts: "Criticism has this week been very active in regard to the rationing scheme and to the conditions under which the timber trade is now working; and as the next few weeks may be very momentous ones for the trade, it is necessary for all merchants and importers to get a clear idea not only of the

scheme itself, but of the circumstances which led up to its adoption and the alternatives before the trade if the present procedure does not prove a success. The rationing scheme is now on its trial, and a somewhat severe trial it is proving. From the very start there were many critics, both inside the trade and in official circles, who were not in sympathy with the Controller's ideas; the failure of the scheme was freely prophesied, and all its weaknesses mercilessly exposed. The idea of rationing timber was first discussed in the autumn of 1917. Towards the end of last year, when the trade was protesting so strongly against the conditions, the Controller was in a difficult position. He had to act in a dual capacity. On the one hand, as the Controller, he was responsible to the Government for the prompt fulfillment of all orders for wood for work of national importance and for the requirements of the Government departments; it was necessary, therefore, for him to arrange a scheme which would provide for the import of the necessary timber, and which would also secure the expeditious delivery of the wood in this country. On the other hand, as the control was not contemplated as a permanent institution of the country, the Controller naturally felt it incumbent on him to provide in some way for the resumption of business by timber importers and merchants after the war was over or whenever the control ceased to exist. To fulfil either part of his duty would have been easy, but to combine the two in one scheme was a problem, and clearly such a difficult operation that the Controller may well be excused if he has not entirely succeeded in his first attempt. If we were compelled to contrast the relative importance of the two aspects of the question, and if they were proved to be incompatible, the trade would come off badly. Were it a case of the good of the country as opposed to the life of one individual trade, there is no occasion to give an answer as to which would be the more important."

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Hears of Big Federal Building Project

Firm prices and a slow demand prevailed in the Ottawa lumber market during the latter part of August and the opening period of September. The volume of business transacted was somewhat below that done during a corresponding period a year ago.

Stocks do not show a great deal of change. If anything they are less than those carried into the fall and winter months of 1917. In some grades reports were that stocks are short, while in other circles it is believed that stocks and grades whatever they may be can always be secured, providing the purchaser is willing to pay the price asked by the holder. No great scarcity of stock has been heard of during the last month.

The outlook for good fall business is difficult to gauge. On the surface it appears rather gloomy. Building operations in Ottawa will be greater this fall than for any year since the war commenced. Such operations, however, do not begin to compare with pre-war operations.

Orders and inquiries, both domestic and foreign, were hardly as numerous as a year ago, or in fact even six months ago. The greater part of this is attributed largely to the slump in American business. Lumbermen for some time past have generally believed that the demand for lumber in the United States is being met with American grown product, coming principally from the western states. Good rail transportation facilitates its movement, but when transportation becomes poor or lines congested, a good deal of American trade will probably again revert to Canada. What the volume of such business will be is problematical. However, some of it may be counted in as a fall and winter prospect.

Another prospect which, if it materializes will in all probability mean much more to lumbermen in Eastern Canada, is the rumored contemplation of building of military hospitals and soldiers' discharge depots. The "Canada Lumberman" understands that there is at present under contemplation by the Militia department and the Public Works department the largest building programme for such structures that has been undertaken since the war began.

No official announcement had been made regarding it up to September 10th. In lumber trade circles, however, it has been heard that such a project is already under consideration, and that the chains of hospitals and depots are to be located in eastern Canada.

The execution of the programme now believed to be under consideration is taken by the trade to mean the utilization of thousands upon thousands, if not millions of feet of lumber. Besides great quantities of sash, doors, flooring, etc. and other interior fittings will in all probability be needed.

One Ottawa lumber firm, early in September informed the "Can-

ada Lumberman" it had received contracts for many thousands of dollars for government work. It did not say when, where, or how the material is to be used, but it is in no way connected with the contract for shell boxes that this company already has.

Speculation on the big project was perhaps the uppermost topic in the minds of certain lumbermen. If the scheme goes through they see not only possibilities but big possibilities for real good domestic business. Stocks are already lower than a year ago, and if this great demand for existing stocks arises it will make a hole in the present supplies and may at the time or later on become an important factor tending toward increased prices, subject or governed by supply and demand.

The utilization of a great quantity of lumber at home would do much to offset the present depression in business largely brought about in the decline in the American demand for Canadian stocks.

The Military Hospitals Commission will not undertake the work, and in all probability the programme will be decided by the department of Militia and Defence and executed by the Public Works department. The exact extent of the programme will not be known until an official announcement is made.

The transportation situation remained good. Reports received during the latter part of August indicated that manufacturers were not carrying, nor had in stock, all the grades they carried in pre-war years, and simply quoted on what grades or sizes they had.

The labor situation, both as to the woods and sawmills, remained unsettled. Quite a few of the floating class from the Ottawa sawmills and woodworking plants went west for the harvest. Factory help for the manufacture of shell boxes became scarce. In one instance three firms making shell boxes in Ottawa advertised on the same day for workers. The class of labor applying at the woodworking plants is not as capable as the men they are replacing.

Just how the woods situation as regards labor will work itself out is a big question. Indications with the Ottawa firms is that labor will be scarcer than last year, even though wages are higher, and the class of woodsmen offering their services are not up to the standard of cutters and workers employed in the camps in 1914. From fifty seven to sixty-five dollars per month and board is being paid for the ordinary run of woodsmen, and they are scarce at that.

The closing down of the sawmills may help the labor situation with the shell box manufacturers, but as far as the woods camps are concerned there seems to be a feeling among the bushmen that they can make just as good money in town, and enjoy added pleasures that the camps do not afford. An advance of from two to three dollars per M in the better grades is reported to have taken place with the wholesalers. Seconds and other grades were not effected by it. Slabs and

Prove Klim by its flavor.

Whip three tablespoonfuls of Klim into a cup of water and drink it. At the first sip your palate recognizes the natural milk flavor, genuine, unmistakable. You realize right away that Klim can be nothing more or less than the solids of pasteurized separated milk. That flavor proves it beyond a doubt.

Klim is casein, albumen, milk sugar and salts of milk in the soluble powder form—the solids that remain after the water has been removed from the original separated milk. No "filler," flavoring or preservative is added. It is all pure milk food.

Being genuine Klim imparts perfect flavor to bread, cake, soups, sauces, tea, coffee, etc. It costs less than any other form of milk. Klim bulks small, is light in weight, saves on freight bills, is most convenient.

Order Klim from your supply house with other groceries. In 10 lb. tins.

We Specialize In Camp Requirements

**Ask Us
to Figure**

Before placing your orders, give us an opportunity to quote you on "H. A." Brand goods—all fully guaranteed.

We have made a careful study of the camp requirements of Lumber Companies and our products, for this purpose, are specially selected, specially cured, and specially packed. We understand just what is expected of Camp Supplies—and how many handlings they must withstand before arrival at their destination.

And we ship when we promise to ship—by Refrigerator Car Service, to obviate delay.

Write us. Let us refer you to other Lumber Companies—with regard to the quality of our goods and our service.

Ask us to quote on your next requirements.

**Save
Many Dollars**

H. A. Brand Oleomargarine, the wholesome new butter substitute, will save your Company many hundreds of dollars. In taste and color you cannot distinguish it from butter. It will keep as well as pasteurized Creamery Butter—better than lower grades of butter and it is always uniform in flavor.

We would advise against purchasing lower grades of Oleomargarine as being almost sure to cause dissatisfaction. Write us direct or get in touch with our nearest branch for quotations.

wood fuel from the mills continued in good demand and prices remained high. Lath remained slow. Sash and doors did not show much activity. The demand for the building grades was mostly for repair and reconstruction work.

Must Increase Production Five Times

If All the Matured Timber of B.C. is to be Used on Paying Basis Declares Mr. J. G. Robson

The lumber production of British Columbia must be increased by five times in order to make use of past maturity timber before it goes to waste. This somewhat startling assertion was made by Mr. J. G. Robson, managing director of the Timberland Lumber Company, at a get-together banquet given recently in Vancouver by the B. C. Loggers' Association to lumber manufacturers.

Mr. Robson says there are millions of feet of timber all through the province which are past maturity and are now going back. The trees are still growing and living, although in some cases the topmost branches are dead. Even in cases where the whole tree is still green and looks good, the timber is no longer in its prime. At the present rate of cutting much of this timber will still be uncut after it is practically useless. No logger can afford to cut this stuff exclusively. He would go broke in short order turning into the mills log after log of which a considerable portion had to be thrown on the scrap heap. The only way to handle it is to mix in a proportion of it with absolutely sound timber. And to keep the proportions on a paying basis and make use of all the past maturity timber, total production must be increased about five times. This involves action by the provincial and Dominion governments.

The increased production of which he speaks Mr. Robson regards as within the range of possibilities, although it cannot be achieved in a year or two. He has unlimited faith in the possibilities of expansion in the British Columbia lumbering industry. The prairie provinces alone, he believes, will eventually take twice the present annual production of all British Columbia mills, to say nothing of the foreign markets that can be developed by proper methods. The development of countries having little or no timber of their own, coincident with the depletion of timber stocks in large timber producing areas will work together to provide a demand for British Columbia timber far in excess of the present demand.

Budget of Briefs from Ottawa

James Davidson's Sons of Ottawa have established two woods camps about thirty miles from Fort Coulonge. About fifty men are at present at each of the camps and eighty are needed. The wood-working plant received another order for two carloads of doors for South Africa. This makes the fourth car since the war began. Good progress is being made by the plant on the large shell box order which will keep it busy days for about two months more.

The John R. Booth sawmill will continue to operate this fall as long as labor is available. Quite a few of the employees of this mill have either left for the western harvest fields or have signified their intention of soon going to the woods camps.

The contracts recently let by the British Cordite Company went to two firms, one located near Montreal and the other at Burlington, Ontario. The tender of the Burlington firm was \$1.02 per box, and that of the Montreal firm one dollar. Tenders from Ottawa firms ranged from \$1.15 to \$1.20. It is estimated about seventeen feet of lumber would be required per box.

Mr. Frank Hawkins, secretary of Canadian Lumbermen's Association, reports a satisfactory season so far as forest fires in the area looked after by the Lower Ottawa Forest Protective Association are concerned. No serious fires had occurred up to the end of the first week of September and the rainfall has been such as to warrant a continuance of favorable conditions.

John R. Booth donated two thousand dollars to the "Sailors fund" campaign. Jackson Booth and Fred Booth gave \$250 each. Subscriptions from the employees of the plant amounted to several hundred dollars.

New Fire Prevention League Formed

An important move was made in the matter of fire prevention when the Ontario Fire Prevention League was formed with the object of reducing the appalling fire loss in the province. There was a splendid attendance at the gathering in Toronto and the greatest interest was aroused in the progressive movement. The head of the new organization is Arthur Hewitt of Toronto and definite steps are proposed for the prevention of fires in Ontario.

The recommendations approved of were:—

The adoption by municipalities of a standard building code so that fire-resistive building construction may be encouraged, the use

of inflammable roof coverings prohibited, adequate exit facilities from buildings secured, and interiors so designed and fire-stopped as to make easy the extinguishment of fires therein.

The adoption by the Province of a minimum building code for the protection of hospitals, schools, asylums and similar institutions, outside the city limits and in small communities in which the establishment and enforcement of a building code is impracticable.

The adoption by municipalities of the "Suggested By-laws" published by the Fire Marshal's Office providing for the systematic inspection of all buildings, for cleanliness, the removal of rubbish, the maintenance of proper exits, fire fighting apparatus and other protective devices.

Application of the principle of common law of personal liability where a fire originates in the premises occupied by any person as a result of his criminal intent, design of wilful negligence.

Wider general use of automatic sprinkler and the more general adoption of the fire division wall.

Careful study of water supplies, fire department efficiency and possibility of co-operation among neighboring cities and towns.

Universal adoption of the safety match, and legislation prohibiting smoking in all parts of factories, industrial and mercantile buildings.

Regulation or transportation, storage and use of inflammable liquids and explosives.

Education of the public in careful habits regarding the use of fire, and prohibition of fireworks except by special license.

Statutory obligation upon every municipality to equip and maintain a fire brigade and provide a water supply.

Equipment of barns containing farm produce with standard lightning rods.

Inspection of all electric wiring throughout the Province.

Will Burn Cordwood in Institutions

By the end of the month some 15,000 cords of wood from Algonquin Park will be shipped for Government use to the different provincial institutions. Some of the wood will be used in the furnaces of the parliament buildings in the early part of the winter, and in the late spring, so as to conserve coal as much as possible. Hon. G. H. Ferguson has considered the matter and feels that wood could be burned at the first of cold season, and work out as well as if coal was being used. In all the provincial institutions wherever possible the Government will use wood for fuel.

The twelve municipalities who have taken advantage of the government's offer to cut wood in the park for the use of the citizens, had cut something like 30,000 cords, and it is expected that this amount will be taken out at the end of the year.

Toronto Lumber Firm is Retiring

The Chelew Lumber Company, who have been carrying on a retail lumber business and planing mill at 74 Van Horne street, Toronto, are retiring from business. Their property has been bought by the Hamilton Gear & Machine Company of Toronto, who will erect a large factory thereon. The Chelew Lumber Company own a large block of land on Wallace Ave., and may resume on this site in the spring if railway siding and other accommodation can be secured. J. R. Chelew, who is the head of the Chelew Lumber Company, will take a long holiday after many years' close attention to business. His brother, Lieut. W. E. Chelew, who was associated with him, is at present in France, having left Toronto about a year ago with the 84th battalion.

Lieut. MacBeth Accidentally Killed

Lieut. Robert E. A. MacBeth, third son of W. J. MacBeth, 60 Brock Ave., was recently killed in an aviation accident at a training camp in Birmingham, England. Prior to his enlistment Lieut. MacBeth was assistant city engineer in Toronto. He completed his course in aviation in December, 1915, and was sent to England where he had considerable service along the British Coast. He had lately been employed in passing upon aeroplanes before their acceptance by the Imperial Government, and it was thought that he met his death while instructing graduate students of the Air Force in their work. Lieut. MacBeth was 27 years old and was a graduate of the School of Practical Science. Besides his parents two brothers are left, Capt. W. C. C. MacBeth, now with the British Recruiting Mission, Chicago, and Lieut. B. MacBeth, R.A.F., who is undergoing treatment in England, having seen service in France.

The Western Canada Shipyards lately received a contract to build five ships for the French Government. The vessels will be of 1,500 ton voltage. The Foundation Company of Victoria recently closed a contract with the French Government for 20 wooden steamers.

Pure Wool Mackinaw Coats, Pants and Jumpers

Decreased Pulpwood Cut in New Ontario

The prospects for a large cut of spruce logs and pulpwood in New Ontario are not very favorable for the coming season. The labor situation is not only uncertain, but the help is very scarce. The New Ontario Colonization Company, whose land, office and mills are at Jacksonboro, on the Transcontinental Railway and the president of which is W. K. Jackson, stated that they have plans laid to get out a fair stock, the quantity of which will be determined entirely by the number of men they are able to put in the bush. The settlers, which the company have been getting in on their own townships, aid them some in getting out logs and pulpwood in the way of taking on small jobs.

Speaking to the "Canada Lumberman" recently Mr. Jackson said:—"I really do not know what the prevailing prices on rough and rossed wood are along the line of the Temiskaming and Northern Ontario Railway, as it is rather early for contracts to be made. I understand, however, that any of the wood along the T. & N. O. that has not been shipped out is sold and simply awaiting loading on the cars. I believe that the settlers along the T. & N. O. as well as the Canadian Government Railways will be putting out some spruce logs and pulpwood during the coming winter. The quantity can only be a mere guess. One thing is certain and that is the pulp and paper mills will not be able to secure their regular quantity of pulpwood simply because of the scarcity of help to get it out. The price that one is obliged to pay for labor when it can be found means that saw logs and pulpwood must bring real prices to-day."

The New Ontario Colonization Company state that their sawmill at Jacksonboro is still running and they are also rossing some pulpwood. They expect the mill will finish its cut the latter end of October and it will not resume again before next spring. The company have disposed of a portion of their output and expect the balance on hand will move out during the fall, winter and early spring.

Fixing Newsprint Prices Had Adverse Effect

The fixing of newsprint prices by the Canadian and U. S. governments had an adverse effect on the earnings of the Spanish River pulp and paper mills, the net revenue showing a reduction of approximately \$390,000. The annual financial statement is a fairly satisfactory

one and in their report the directors say that it is with satisfaction that the directors now report construction work completed. With the sulphite mill enlargements and improvements finished, the board mill in full operation, and paper mills brought to a state of high efficiency, the company's now balanced plants should proceed in their operations with improving results. The total daily production of pulps, boards and paper for market sale now amounts to 570 tons, which, under normal conditions will shortly be increased to 600 tons, the capacity of the plants. Stocks of newsprint paper throughout Canada and the United States are unusually low, the demand strong, and as newsprint has been declared to be an essential to the prosecution of the war, the directors anticipate no difficulty in disposing of the entire output during the ensuing year.

While it was expected that the profits for the year would provide sufficient funds to complete the above enlargements and improvements as well as supply additional working capital for the increased output, the low prices fixed by the Governments rendered necessary additional accommodation from the banks. The inventories, particularly of pulpwood, might have been materially reduced, but your directors considered it the part of wisdom to keep heavily stocked in all raw materials, and the company is fortunate in having been able to obtain, under great difficulties, a full supply of pulpwood for the coming year.

The Grading of Stained Basswood

Editor "Canada Lumberman:—"

Can you give me any information on how stained basswood lumber should be graded? I have about 50,000 feet of basswood 4/4 and 5/4 which got blue-molded in the pile. Some of it is badly stained. The lumber was cut about four weeks ago when I noticed the stain. Would this be classed as dead culls, or would it pass as No. 2 common?

E.G.B.

Basswood unless in the water at this late date would be dozy ended and if in the water one would fully expect considerable stain on stock sawn during the latter part of the summer time. Stock that was blue molded would naturally go into mill cull unless so seriously molded as to be rotten when it would go into dead cull.

The British Paper Markets are Your Opportunity

Establish a market for your paper stock now and it will be a great asset to you in after war trade with Great Britain. We can make very advantageous contracts for Canadian paper of all kinds and especially newspaper stock. This is a big opportunity for Canadian mill men. We are the largest paper makers' agents in Great Britain and will be glad to hear from manufacturers interested in export trade.

To the Lumber Companies of Canada:

You have the Goods. Place your Lists with full particulars in our hands. We are in daily touch with all the Buyers in the United Kingdom.

PLEASE NOTE.—We pay cash against all documents, and take the whole of the Delcredere risk on Buyers.

YOUR opportunity in Wood Pulp

Every Canadian Saw Mill or Plant could profitably take advantage of this opportunity. By installing an inexpensive Kraft Soda Mill, all the slabs, tops, bottoms and waste wood may be utilized to produce Wood Pulp. We can place long term contracts for all that Canadian concerns are able to supply. The Swedish supply is practically cut off and Canada has a free field for this business. We will be pleased to send you details of this opportunity.

EDGINGS

Ontario

Reports received at the Department of Lands, Forests and Mines, Toronto, show that no merchantable timber has been destroyed by fire in New Ontario during the past summer.

M. J. O'Brien, the big contractor, timber and pulpwood man of Ottawa and Renfrew, is quite likely to succeed to the vacant Ontario Senatorship in place of the late Brigadier-General Mason.

David B. Ritchie, saw miller and dealer in lumber and building material, St. Chrysostome, Que., has sold out his business there and removed to Collingwood, Ont., where he has bought out the Collingwood Hardwood Co.

Mrs. E. J. Zavitz of Toronto has been elected to the Senate of McMaster University to represent the Arts graduates for a five-year period. This is the first time a woman has been elected to this position. Mrs. Zavitz is the wife of the Provincial Forester, who is also a graduate of McMaster University.

The Savanne Lumber & Tie Corporation has been licensed to carry on business in the province of Ontario as timber merchants, sawmill proprietors, timber growers and to manufacture, buy and sell lumber bark, wood, ties, pulpwood and all products made therefrom. Mr. W. A. Dowler of Fort William, Ont., is attorney for the company.

In view of the scarcity and high cost of fuel City Architect Pearse of Toronto is considering a warmer type of house for Toronto so that fuel bills may be lessened. Warmer houses would cost more to construct, and it is just a question with the official as to whether such a type at a greater cost would be acceptable to the people on the possibility of using less coal.

Henry Walmsley Welch, of Toronto, died recently of pleuro-pneumonia and complications, in his seventy-eighth year. He was born in Quebec city, but came to Toronto to live more than 30 years ago. For over 25 years Mr. Welch had been connected with what is known as the Cook Land Company, formerly the Cook Lumber Company, in the capacity of accountant. He is survived by his wife.

History was made in Waterloo County recently when a beautiful woodland lot of 40 acres at the confluence of the Grand and Conestogo Rivers at Conestogo was handed over by Mr. Walter J. Snider to Hon. Finlay Macdormid, Minister of Public Works, representing the Ontario Government, with the object of furthering the policy of conservation and reforestation throughout Canada.

The Provincial Lumber Company Ltd., has been incorporated with head office at Toronto, Ont., and capital stock of \$40,000, to carry on business as timber and lumber manufacturers, sawmill proprietors and timber growers; to buy, sell, grow, prepare for market, manipulate, import, export, and deal in timber, lumber and wood of all kinds; to purchase and deal in timber limits, and to carry on business as ship-owners, etc. The provisional directors are W. J. Forrester, G. C. Campbell, and A. D. McKenzie.

Fire of unknown origin caused damage estimated at more than \$200,000 in Eddy Bros.' lumber yards at Blind River recently. The fire started about noon at the edge of the dock and worked inward, fanned by a west wind, until at least one-third of twelve million feet of lumber piled in the yards was reduced to a charred mass. Two tugs and the town fire engine taxed their capacity in throwing streams. The Wallace Lumber Company also lost considerably, being owner of part of the burned lumber.

Hart & McDonagh of Toronto have entered into a contract with M. P. Prince of Wallace, Ont., to cut and deliver for them during the coming year 1,000,000 feet of lumber, principally birch and spruce. The timber is located in Nipissing County on the line of the C. N. R. Hart & McDonagh have also made another contract with John Marshall of McDonald's Siding, Hastings County, to cut 1,500,000 feet of lumber, consisting of hemlock, birch, spruce and brown ash. The larger portion of the stock, however, will be maple.

Robert Elliott, of Magnetawan, Ont., was a recent visitor to Burks Falls, and according to a local newspaper, he has been a resident of that district for 49 years, being one of the pioneer settlers. He says that the waste of valuable timber in that section has never been stopped. Fire has destroyed much of it every year. This year a four-mile stretch of woods in the vicinity of Lake of Many Islands was visited by the destructive element. Mr. Elliott thinks that the Minister of Lands, Forests and Mines should do something to prevent the cutting down of small trees, some of them being mere saplings.

Eastern Canada

Williamson & Crombie, lumber dealers, Granby, Que., have dissolved.

A modern sawmill at Stanley, N.B., owned by Stanley Douglas, was recently destroyed by fire. Mr. Douglas has not decided whether he will rebuild or not. The plant was valued at \$20,000 and was insured for only \$6,000.

Suspicious circumstances attended three or four fires which broke out recently in the Pointe St. Charles district, Montreal. One of the premises visited was the Jas. Shearer Lumber Yard. A search revealed a quantity of wool waste soaked in oil and tightly packed under a wood pile.

Baptist, Cloutier & Pothier Limitee have been incorporated with head office at Three Rivers, P.Q., and capital stock of \$49,900, to carry on business as sawmill, shingle mill and planing mill operators, etc. Among those interested are G. E. Baptist, A. G. Cloutier and R. Pothier.

The box factory of H. Chagnon & Co., Burnett Street, Montreal, has been destroyed by fire, together with a large quantity of lumber. The building was two storeys high and was constructed of wood. The firm had a large Government order for shell boxes in hand. The company will rebuild at once.

Robert Godfrey passed away recently in Chatham, N.B., after an illness of several weeks, aged 69 years. He was one of the best known lumbermen on the Miramichi River and had a large number of friends. The late Mr.

Godfrey was a highly respected citizen and leaves a wife, six sons and one daughter. Three of the sons are overseas.

Golding & Starrett, Ltd., have been incorporated with head office at Petersville, N.B., The incorporators are Geo. M. Golding of Brooklyn, N.B., and Edward B. Starrett of Sougis, Mass., and they are empowered to carry on a general timber business.

The Adanac Color Company has been incorporated with head office at Montreal, P.Q., and capital stock of \$20,000 to carry on business among other things as lumbermen, and to purchase, acquire, lease, hold and dispose of timberlands and timber limits, etc. Among those interested are L. J. Beique, P. R. Bisailon, H. R. Bisailon and F. J. Bisailon, all of Montreal.

Commercial circles will be interested in the revival, at the meeting of the Canadian Bar Association, of the discussion regarding bankruptcy legislation. S. W. Jacobs, K.C., M.P., reviewed the measure which has been introduced into Parliament, and which has been delayed in order to enable conferences to be held regarding it. He argued in favor of assistance being given honest debtors to rehabilitate themselves, after they had given up everything to their creditors.

A recently incorporated addition to the Riordon Pulp and Paper organization is that of the Riordon Sales Company, which has just been incorporated with a capital of \$50,000, \$100 par, and with headquarters in Montreal. This new concern will act in the capacity of a general selling company, and will buy and sell pulp, paper, lumber and other commodities. Charles Riordon is the president of the Riordon Sales Company; Carl Riordon, vice-president, and F. B. Whittet, secretary-treasurer.

For some time negotiations have been under way for the purchase of the B. A. Mowat lumber mill and limits by Fraser Ltd., of Fredericton. During the early spring cruisers went over the limits and appraised the property. Now it is understood that the deal has gone through and the transfer will be made shortly. Frasers, Limited, own a considerable block of pulp ground in Quebec on streams emptying into the Matapedia, and it is said the Mowat mill will be converted to ross this fall for the Edmundston pulp mill of the Fraser Co.

A reduction of fifty per cent in the lumber cut in New Brunswick during the coming winter is forecasted by one of the prominent operators. One of the chief reasons given for this prediction is the fact that most of the operators have their storage space completely filled with manufactured lumber which they have been unable to ship owing to the scarcity of vessels. Another important factor is the difficulty in securing labor, which is becoming more pressing as war's demands removes more and more of the men. The cost of supplies and equipment is going up and this, with higher wages for the men, is making operations more costly and therefore more of a speculation. These latter features of situation also point to increased prices for the product.

Net profits of the Laurentide Company, Limited, Montreal, for the year 1917, as shown by the annual report presented to the shareholders, amounted after fixed charges, war taxes, depreciation, etc., to \$1,704,655, equal to 17.8 per cent. on the capital stock of the company, as compared with \$1,720,011, or 17.9 per cent., for the year 1916. Gross profits of the company amounted to \$2,593,834, an increase of about \$373,000, which increase was absorbed by a reservation of \$150,000 for war taxes, against nothing for the previous year, and an additional \$389,000 to the reserve pension fund. Allowance for depreciation was about \$20,000 less than during 1916, so that the surplus carried forward amounted to \$744,655, compared with the previous year's carry forward of \$856,011. Profits from lumber showed a slight decrease, while interest from investments rose about \$8,000.

Western Canada

The Atlas British Columbia Timber Company Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$20,000.

The Cameron Lumber Co., Garbally Road, Victoria, B.C., intend laying 6 in. main throughout their yard with hydrants for fire protection.

A new sawmill, with a capacity of 15,000 feet a day, is being built in the Surrey section, B.C. It will be operated by Lawrence and Rherin of Port Moody, who have bought a large quantity of timber in that section. The mill will be electrically driven.

A new sawmill is being built on the Zimacord River, six miles west of Terrace, B.C. The mill will have a sawing capacity of 40,000 feet a day, and will saw spruce from timber limits on the Kitsumkalum River held by Sir Henry Pellatt of Toronto. A. Ludgate is erecting the mill.

The sawmill at the mill camp of the Canada Copper Corporation at Penitction, B.C., is cutting about 20,000 feet of lumber a day. Twenty-five new cottages have been erected by the Copper Company, as well as water tanks holding 100,000 gallons of water each, and other improvements.

Sealed tenders are being received by the Minister of Lands for B. C., until October 8th, 1918, for the purchase of License X1035, to cut 11,000,000 feet of cedar and fir on an area adjoining Lot 913, New Westminster District, situated on Haslam Lake. Three years will be allowed for the removal of the timber.

The Fir Tree Lumber Company are operating a modern shingle mill on the Coquahalla River, fourteen miles from Hope. One of the features of the new mill is a cable car system driven by power from the mill, which conveys the trucks of shingles from the mill to the railway siding to be loaded. The principals of the Fir Tree Lumber Company are Messrs. Collins and Farmer.

There is more than a possibility, it is stated, that the big lumber mills at Ruskin, B.C., belonging to the Heaps Estate, in liquidation, will be refitted. It will be remembered that the machinery in the big mills at Ruskin was sold to the Robert Dollar Company and is now being used in their large mill at Roche Point, but if the deal for the logging of the Heaps limits goes through, it is the intention of the company interested to at once install machinery in the big buildings and manufacture their output from the limits.

A get-together meeting and banquet was held by the B. C. Loggers' Association and lumber and shinglemen recently in Vancouver, and problems of the trade were discussed. Among the subjects were the surplus product of the log, and how to dispose of it to the best advantage, curtailment of production and closer co-operation. Mr. A. E. Munn presided. The committee in charge of the affair was composed of Messrs. G. G. Johnston and R. Morse.

—the unproductive scrap heap

Is your mill up-to-date or are you still content to allow that pile of sawdust, shavings, ends, slabs, etc., to prove a burden instead of big source of income. With the big prices which prevail for wood pulp and those chemicals distilled from waste wood it will pay you to consider installing the necessary plant to make the scrap heap productive—and then write us! We have specialized in chemical-producing plant for over 75 years and have installations in all parts of the world.

Type V-5 Heavy Duty Resaw

For Your Heavier Resawing

The present day demand for the larger dimensions makes the use of a heavy duty resaw imperative. The Yates Type V-5 is built throughout for heavy and consistent work. Its heavy one-piece base and massive column insure stable foundations for all working parts. The "V-5" will prove durable beyond your expectations. The double lever set-works provides a quick and accurate means for positioning the rolls, either separately or simultaneously. An exclusive device allows either set of rolls to be made rigid or yielding at the will of the operator.

Send to-day for further particulars on this sturdy resaw

Standard 2 Drum Engine
for Skidding or Loading
Logs the year round

Looking Ahead will Reduce Costs in Your Woods Output Next Season

Skidding and loading machinery will doubtless be used to a much greater extent than ever in getting out the next season's cut, owing to the ever increasing shortage of labor.

Skidding and loading machinery will take the place of men and help you solve your labor problem. It will also reduce your operating costs by moving your logs from stump to car cheaper and quicker than can be done by men and horses.

To ensure early delivery of the skidding or loading machinery you are planning to use, order early, and thus avoid costly delays during the operating season.

If you have not a copy of our booklet "Suggestions for the Lumberman," drop us a card. It will be worth your while:

Marsh Engineering Works, Limited Established 1846 **Belleville, Ontario**

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

**DREADNAUGHT
TWO-PIECE
STEEL HAMES**

For heavy hauling, pulling "dead-weight" loads as in logging, plowing, harvesting or other farm work, the Dreadnaught two-piece double strength steel hame quickly proves its superiority.

Strong and Durable—Won't Break

Forged steel draft studs, electrically welded rings, points of greatest strain reinforced by overlapping parts, and rigid inspections account for the Dreadnaught's 15 per cent. greater pulling strength over any other hame.

Write for descriptive folder. Dealers write for our proposition and selling helps.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of

Chapman Double Ball Bearings

— IN —

Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

**You pay for Chapman bearings
whether you buy them or not**

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, break-downs or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims.

The Babbitt Metal that's at the Front in Efficiency and Economy

HARRIS HEAVY PRESSURE

THE ARISTOCRAT OF BABBITT METALS**SHIVES LUMBER CO., LTD., Campbellton, N.B.,
Canada**Messrs. The Canada Metal Co., Ltd.,
Toronto.

Dear Sirs:

Replying to your inquiry regarding our experience with Harris Heavy Pressure Metal, would say we have been using this metal for about five years in main bearings and cranks of Wickes' gangs and steam engines, also edgers, etc., in place of more expensive metals that we formerly used for these bearings.

We are pleased to be able to say that the Harris Heavy Pressure has in every case given us good satisfaction, being a nice metal to pour without shrinking or cracking, and wearing well. So long as this metal retains its present standard of excellence we will have no hesitation in using it for the most severe conditions we have for babbitt metal.

Yours

JOHN M. MACLEAN,
Superintendent.

TRIMMER LINK-BELT

There is scarcely a mill requirement for Link-Belt, however special, that cannot be perfectly met with our standard links and attachments. The above illustration shows our standard "H" class Link-Belt with "A" attachments for saw feeding purposes. Write us about your special requirements. Ask for Book No. 260. Genuine Link-Belt has this mark  on every link.

GRATON & KNIGHT

Standardized Series
LEATHER BELTING

Tanned by us for belting use

GRATON
& KNIGHT

Holding the Line

You honor the Turbine as a Field Marshal, the Engine and the Generator as Generals. But, how about Private Belt, without shoulder straps or collar emblems, grimly holding the line? Too often you give him consideration only when, under cruel strain, he breaks.

The great need is to fill the line with those Privates that stand the strain better than others. A guiding rule, easy to remember, is that the demand for Graton & Knight Standardized Series Leather Belting is greater than that for any other belting in the world. It started from nothing and has grown steadily and naturally.

Send for our new book, "Standardized Leather Belting"

Grooves cut with Huthier Bros. Dado Heads.

**Fits Any
Saw Mandrel**

A Huthier Bros. Dado Head
consists of two outside cut-
ters and enough inside cutters
to make the required cut. This
Head will cut perfect grooves,
with or across grain, any width.
It is an easy Head to keep in
perfect condition, has a simple
quick adjustment, and may be
enlarged any time after pur-
chase. Sent on approval and
if not satisfactory return at
our expense.

ROCHESTER, N. Y.

STEAM FEEDS

Our Direct Acting Feeds are built in any desired size

This mark on your saw-mill machinery is an indication that your lumber manufacturing equipment is the best and most economical money can buy.

The illustration gives a good general idea of our direct acting, or shot gun, steam feed, which we build in the following sizes: 8 in., 10 in., 11 in., 12 in. and 14 in. bore.

The cylinders are made in 6-ft. sections, and are bored to exact diameter. The flanges on cylinders are faced perfectly true, and finished to templets, so that each section is interchangeable. The flanges are also turned on the outside, which is a great convenience for levelling or lining the feed when placing same in mill. For each end of the completed cylinder we furnish short pipes, which are long enough to reach the valves and permit the valve connections and steam feed to nicely clear the floor timbers.

The front cylinder head is our improved pattern.

The piston rod is made from double thickness, seamless steel tubing, of extra large diameter. It is made in two or more sections, according to length of feed.

Our illustrated catalogue contains full details.
A copy will be sent you on request

**We have the following on hand
ready for shipment**

one Portable Saw Mill outfit with Right hand Saw Frame and Carriage—set of track timbers, also the following items:

No. 1 Log Jack with foot wheel and idlers.

No. 7 Log Jack with foot wheel and idlers.

10 inch by 36 ft. Steam Feed.

10 inch by 42 ft. Steam Feed—Either feed can be furnished with vertical or horizontal valves. Double acting set works in No. 1, 2 and 3 sizes.

We have one second hand plain slide valve engine, right hand, side crank, 9 x 13, suitable for a small saw mill plant.

Write at once for information regarding the above
or any other you may need

PORTABLE SAWMILLS

The Upper Fraser River Lumber Co. freighted a portable outfit, like the above, seventy miles over rough country to cut material for their big mill at Dome Creek, B.C.

They cut on an average of over 12,000 ft. per day, they turned out 200,000 ft. for their own use, sold several thousand dollars worth of lumber, produced over 2,000 ties and 100,000 ft. of lumber for stock. All this lumber came off their mill sight and was cut on the

Waterous Portable Sawmill

We back this mill for strength, efficiency and simplicity against any portable outfit being manufactured. Hundreds are in use in every part of Canada.

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 90c per lb.; West of Fort William, \$1.00, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

SAW MILL MACHINERY

Firstbrook Bros. Limited

Having decided to discontinue saw mill operations at Penetang have the following machinery for sale. This machinery is all in operating condition and is open for inspection at Penetang, Ont.

Mill Machinery

Extra heavy log haul-up works with inch round and flat chain, 128 ft. centres.

2—Waterous log unloaders or kickers, 3 arms, 10 in. cylinders.

1—Waterous log loader, 3 arms, 10-in. cylinders.

1—Waterous right-hand double cutting band mill, 11 in. saws, 8 ft. wheel, with 3-block carriage; 24 in. opening; Payette set works and dogs; 8 in. x 36 ft. steam feed.

1—Waterous double edger for 20-inch saws, lever shifter.

1—Payette double edger for 18-in. saws, lever shifter.

48—live rolls about 8 ft. long by 10 in. dia.; extra heavy, sprocket drive.

20—High cars with roller tops, 24 in. heavy wheels on 3 in. axles, standard gauge.

1—Mershon 4 saw gang resaw, takes squared cants or just one face, ideal machine to cut small logs and centres of large after good has been taken off.

1—Payette picket machine, made specially for shade roller stock, will feed pieces 16 in. long, also sorting table with chain top.

1—Rogers Iron Works circular resaw for making box lumber from slabs; fool-proof machine.

1—Payette edger for box and short stock.

1—Rogers twin circular or tie maker.

1—Payette lath bolter and lath machine.

1—Pair lath trimmers.

1—Picket trimmer (bunch trim).

Conveyor drives and chains.

Pulleys, gears, heavy line shafting and countershafting with bearings.

Send us your requirements.

We have a large stock of double and triple leather belting in widths from 10 in. to 48 in.

Power House Equipment

2—Return Tubular Boilers, Polson make, 60 x 16 ft., Dutch oven settings.

1—Return Tubular Boiler, Goldie & McCulloch make, 54 x 16 ft.

Breeching and smoke stack for above boilers, 50 in. dia., newly painted, 600 ft. new ½-in. guy and plate for brick pier.

1—Northey boiler feed pump, outside packed, 8 in. x 5 in. x 12 in., for 3 in. suction pipe.

1—Pair Polson "Brown" type engines, coupled on quarters, 22 in. x 50 in., with 16 ft. x 48 in. belt, balance wheel. Excellent engines.

1—Pair American feed water heaters for above engines; 10 in., copper coils.

Filing Equipment

1—Waterous band saw grinder for 6 in. saws.

1—Baldwin retootheer for band saws.

1—Wm. Hamilton band saw shear, 12".

2—Reversible saw levelling blocks.

2—Chilled band saw anvils.

Hanchet band saw swages; Crescent circular saw swages; shapers and dressers.

Yard Equipment

About 15 tons each 45 and 56 lb. rail. Booms and boom chains, ½, ¾ & 1. Winches and other mill supplies. Small shunting locomotive.

Prompt shipments and bargains for quick sale. Will send all particulars and prices on application.

Carrying out Contracts and Adjusting Trade Troubles

When is a contract not a contract, and under what circumstances can it justifiably be broken; how far is the letter and spirit of an agreement to be observed? It is not infrequently the case that fellows who talk about the sacredness and obligation of filling an order, so far as others are concerned, will, when it comes to dealing with this thing themselves, not think twice in the matter of violating an agreement. Too many men in business to-day are painfully conscious of the faults of others, but are purblind with respect to their own. They lay down the law for everybody else with little thought or effort to live up to it themselves. While it has been charged that certain wholesalers are slow or negligent in the matter of filling an order, particularly on a rising market, there is, on the other hand, ample evidence of certain retailers wanting to cancel as soon as the price on any particular line of lumber declines. It is not well to render judgment hastily or form a superficial view as when a thorough investigation is made, it is frequently found that retailers who charge wholesalers with neglecting to carry out their contracts, are very much in the position of the man on the outside looking in instead of the one on the inside looking out, and vice versa. In such a case as this the wholesaler is possibly not seeking at all to avoid the issue, but is prevented from making delivery owing to embargoes, shipping conditions, labor situation and many other causes. He is in all likelihood doing the best he can under very trying circumstances to make good the requirements of his customer, but if the lumber has to be secured from some distant point, it is not always easy to have the business attended to promptly since there are so many obstacles to overcome during these difficult war times, when permits, licenses, etc., never seem to end.

On the other hand, instances have been known where retailers have promptly cancelled orders for specific lines of stock on the ground of their being able to buy a satisfactory substitute at a little less cost and on the plea that they are in a terrible hurry for the merchandise.

Of course, in the discussion of delayed deliveries of stock and the adjusting of difficulties between wholesaler and retailer there are many points to be considered on both sides. There is no particular body of men which can claim a monopoly of all the virtues and excellencies of character with which some are prone to plume themselves. In other words, there are faults and shortcomings on both sides when market conditions are upset and transportation presenting all sorts of trouble. The retailer perhaps charges the wholesaler with a desire to evade responsibility, and the latter in turn is inclined to blame the retailer for not placing his order sooner and being too impatient, without an adequate appreciation of what the mills and the railways are up against at this juncture.

However, by the organizations which now exist, a better understanding prevails to-day between wholesaler and retailer. As was pointed out at the recent social gathering of the trades in Toronto, in times like these when sources of supply are uncertain, prices constantly shifting and general conditions unstable, differences may arise between individual retailers and wholesalers, but fundamentally their interests join and are inseparable. The wholesaler wants strong customers and the customers want reliable sources of supply, and if the spirit of give and take is exercised there should be, in the growing disposition of the times, when the principle of co-operation and conservation is receiving more attention than at any other period of the history of the world, an ever increasing desire and movement in the direction of eliminating friction, honoring agreements and keeping up the good name of the lumber business in all its varied activities.

What Constitutes Success in the Struggle of Business?

What makes one lumber merchant go ahead in the business arena and win increasing trade and wider connection each year, while another man with equally as well equipped yard and facilities and possessing a personality as attractive as that of his competitor, never seems to forge ahead, but apparently marks time as the seasons come and go? The same question may be asked with respect to saw mill operators, wholesale lumber dealers and timber merchants generally, and the problem affords scope for careful analysis.

If the query, what constitutes or makes for success was put to a score of men, the nature of the answers received would vary as widely as the character, disposition and mental equipment of those replying. It is a proposition which engages the best attention and most profound thought of many efficiency experts and others who seek to guide and direct their fellows on to larger achievements and greater expansion.

There is no fixed, definite rule that can be laid down regarding what success is in the lumber business. To hear some men speak of success they would give it a general application, irrespective of personality, conditions, opportunity or environment. It is generally the outsider who can tell the enquirer all about it and to hear him discourse glibly on the elements or factors of success, one would think the latter was a kind of commodity cast in a mould or measured by some metrical system. Ask the man who has made a distinct success in his line exactly how as he did it and he will tell you that he does not know. He cannot put his finger on a single thing and say this and this alone is responsible for his present status in the financial or commercial world. Many authorities will assert that industry, integrity, energy, perseverance, application, initiative and half a dozen other things thrown in are the ingredients which create success. There are scores in every line of trade who possess all these desirable qualities, and yet have never made much more than a living or expanded in any way, so that it cannot be revealed by chart or compass as to what in itself constitutes success.

All other things being equal success is knowing and doing the proper thing at the proper time—not after some one has done it, for it is then too late to reap any large measure of reward, although there is an old and true axiom "better late than never."

There are scores of manuals on business management, methods, procedure and practice, all of which are in themselves valuable and helpful, yet not one of which could transform some humans into any-

thing like making "a go of it." They will be "mark-timers" all their lives, or more in a groove all their days, which all leads up to the deduction that success largely lies within. Like the good-will of a business it is a certain, intangible, uncommercial something which cannot be properly appraised from the outside, but must come from within. Many persons, however, possess the spirit of content and complacency and seem to regard it as a special endowment. Recently a leading citizen talked to a man who had spent 48 years in a certain line of business and was in many respects, clever and original, yet at the end of nearly a half century's experience, was practically forced to liquidate his affairs and begin life in a clerical capacity, after being the employer of half a hundred or more men, and doing a business of over a quarter million dollars annually. When some associates sought to extend their sympathy his response was to this effect. "Oh well, we cannot all be successes, or even win a competence in business. There must be some who must fall back and I just happened to be one of them."

All of which goes to show that it takes all kinds of people to make a world, and very frequently a combination of many characteristics to score success. Exactly what success is in each business, and what it implies will always remain an undefined and somewhat unsatisfactory term, but there is one quality at least which it must embody and that is service, first, last and always.

What Proper Cost Accounting System Means to Retailers

A matter of vital importance to the retail lumbermen in these days of constantly increasing outlays for material, advancing freight rates, scarcity of labor, spasmodic demands, delivery and shipping difficulties created by the war, is the question of cost accounting. It has been suggested that a uniform system of bookkeeping throughout Ontario might be established for the yardman, so that he would know exactly where he is at. As it is now, no two dealers figure output and percentage of the cost of doing business exactly the same way. There should be a general working basis for all yards, so that each retailer would know what to take in and what to leave out. By this means an accurate, comprehensive and feasible plan would be arrived at and the general cost of doing business fully determined. This would help put the industry on a strong financial basis. It is rather surprising that the percentage of total sales, which represents the cost of doing business, varies, according to the reports received, all the way from 18 to 45 per cent. There is certainly too much discrepancy here. Either the one is much too high or the other far too low or there is a cog loose somewhere in the gearing of the cost mechanism.

A cost survey based upon definite data would afford a practical illustration of wherein errors have been made. The man who knows his costs and can gauge how his stock stands, what his turnover is and who prices his goods on a certain per cent. and sees that he gets it, is the one who is forging ahead. He knows whether he is making money or not, by eliminating all guess work and rule-of-thumb ideas; he is taken out of the happy-go-lucky or trust-I-will-come-out-all-right-in-the-end- class and his business placed on a firm footing.

Cost accounting and the question of figuring costs has always been one of the principal themes at trade gatherings, and, if the Ontario Retail Lumber Dealers' Association is successful in instituting an efficient system of account keeping that will tell its user at all times where he stands in the way of stock, turnover and expense of doing business and net amount of his profits it will have performed a real service and converted many dealers to a new and desired state. The more efficient that the average business man becomes the better the service he renders and thus the dignity, integrity and best traditions of the trade are maintained.

It has been said that there are any number of storekeepers in Canada, but comparatively few merchants, and in a similar sense, it might be pointed out that there are scores upon scores of suppliers of building materials, but the live wire, competent retail lumber merchant is not to be found in every centre. When you see him it does not take long to recognize him by the character of his premises, the

layout of his yard, the facilities of his equipment and the arrangement of his stock. When there is outward evidence of system, order and service one will generally find that the cost system of such a man is based on proper considerations; and that he knows, financially and otherwise, where he is at at the end of each selling season. He believes in the dignity of his calling and devotes his best interests to upholding and preserving its good name and well being.

How Service Counts in the Steady Expansion of Trade

The chief opportunity for the expansion of trade in the retail lumber line during the fall months is in the matter of supplying material for repairs. While probably no large structures will be undertaken this autumn, there is a fruitful field for the exploitation of new business in connection with the alterations and renovations which are usually carried on in rural communities. The majority of farmers in Ontario, and the eastern provinces generally, have had a bumper crop and, with the present exalted prices for produce they are in a better position and in a more plastic frame of mind than ever to undertake some long delayed work in connection with their houses, barns or outbuildings.

The retail lumberman who makes a special study of farming conditions, who gets in intimate touch with the requirements and aspirations of the average resident in the country surrounding his yard, will build up a business much more rapidly and extensively than his neighbor who sits around an office all day waiting for something to turn up. It has been demonstrated time and time again that service wins and pays every time. Trade naturally follows friendship and directs its course along the channel that has been made smooth and easy by the various courtesies rendered by those who believe that service counts first, last and always. Then again, the retail lumberman, by circulars and the use of printed post cards, leaflets and other means can drive home the idea that he is willing and ready to supply anything in the building line, and, if he has not got it in stock, that he possesses special facilities for meeting any want in the shortest possible time.

At any gathering—other things being equal—the most instructive, cogent and impressive addresses are delivered by men who possess an abundance of knowledge on the subject which they are discussing. They are filled with its importance, inspiration and ideals. The expression "on fire with his theme" aptly suits in connection with many practical talks that lumber merchants and others hear from time to time. It is the same with catering to the needs of the community in building materials. He who is alert and watchful of the interests of others, who believes that no task is too small or no undertaking too great, and who goes out of his way to oblige, is bound to win friends and favors on every side.

Selling doors, sash, flooring, interior trim, etc., at a moderate price, will not hold custom in itself. There must be something behind the enterprise with which the man is connected. He must have personality and feel that his is a business in which pride can be justly taken, that he is of some service and direct benefit to the city, town or village in which he resides, and that every promise he makes must be fulfilled. Service means more than simply quick salesmanship and the prompt delivery of goods. It means honest values, satisfaction on the part of the buyer; every promise kept in connection with a transaction and the establishment of a basis of confidence that will result in a pleased patron not only recommending the retail lumberman to his relatives and friends, but in speaking a good word for him on every auspicious occasion. It is marvellous the impressions which are made upon us through our contact and association with others. When a retailer is well thought of and well spoken of on every hand and bears the goodwill of the people whose needs he serves, he has earned something worth while in this day of strong competition; there is nothing that tells and tallies more than the high regard of those about us. Let the conviction prevail that we are making the most of our opportunities by giving service in all that this frequently much abused term implies.

Some Logging Problems at Woodlands Section

Continued Shortage of Labor Turns Attention of Operators to Varied Uses of Mechanical Equipment in the Woods—Practical Methods Reviewed

Although the original plans of the fall meeting of the Woodlands section of the Canadian Pulp and Paper Association, held at the Windsor Hotel, Montreal, on September 20, had to be altered, owing to the inability of members to prepare papers, consequent on business pressure, the proceedings were of great interest. The meeting was successful in every respect; the attendance was large; the speeches were short and mainly of an informal character; and the suggestions were all in the direction of improving the woods operations of the various companies. Mr. Gerard Power, of the River Ouelle Pulp & Lumber Co., St. Pacome, P.Q., presided.

The first business was the acceptance of the following new members: Messrs. R. M. Kenny, woods manager, James MacLaren Co., Ltd.; J. H. Addison, N. Rouillard, and S. H. Varney, Canada Paper Co.; R. Smyth, Canadian manager, St. Anne Lumber Co., St. Anne des Monts, P.Q.; R. O. Sweezy, forest engineer, Royal Securities Co., Montreal; M. Montgomery and R. L. Montgomery, Montgomery & Sons Co., Ltd.; Wm. Russell, James Richardson Co., Ltd., Matane, P.Q.; W. J. Williamson, Riordon Pulp & Paper Co., Calumet, P.Q.; S. P. Grogan, Ontario Paper Co.; H. T. Ham, St. Maurice Paper Co.

The chairman briefly reviewed the events which led up to the formation of the section, and proceeded to refer to the difficulties under which woodlands managers of the companies were working owing to the scarcity of labor and other conditions. It was owing to these that it was impossible to hold a woods camp of the woods managers during the past summer to discuss various problems. One of the most important points to consider was whether the companies would be willing to add to the cost, say \$3 or \$4 per cord delivered at the mill, in order to put their woods in better shape. Another point was as to a definite system of logging in Ontario, Quebec, and New Brunswick. Conditions and regulations were so different that it was not possible, he believed, to have a definite rule, and even different parts of the province of Quebec could not be handled in the same way. There were not sufficient experts available to examine all the territory and decide how it should be cut. There was no doubt in his mind that if the logging were done in company camps instead of by jobbers the limits would be in much better condition. He doubted whether co-operative logging was feasible at the present time; the matter had not been sufficiently studied to pronounce very definitely on it, but it was worth looking into, particularly in such cases as the St. Maurice and other districts where four or five companies were operating.

With regard to the amount of timber available, he questioned whether any of the companies knew definitely how long their timber would last; conditions were changing almost daily. Having referred to the immense quantities of timber in the province of Quebec which

could not be worked owing to their inaccessibility, Mr. Power spoke of the problem, in this connection, of dealing with birch and poplar, and suggested that the use of portable mills might solve the problem. Mr. Power also referred with satisfaction to the great reduction of the cost of fighting forest fires by the three Eastern associations.

Dr. Howe, of the Conservation Commission, gave some details of his investigations in the province of Quebec on cut over lands, in relation to mixed forests. In some of these forests hardwoods predominated anywhere from 50 to 75 per cent. In some instances practically all the spruce had been cut—which condition was favorable to the growth of balsam; then the land was cut for balsam, which made for the growth of the hardwoods. Dr. Howe pointed to the liability of balsam to disease, so that it was impossible to rely on the supply from the point of view of the paper-maker. There were many young spruce trees in these forests, but they grew with great slowness, and it would take from 150 to 200 years before they would make 12 in. trees.

Rational Methods of Forest Utilization.

Mr. Ellwood Wilson, Laurentide, Ltd., Grand Mere, P.Q., in a short talk on Rational Methods of Forest Utilization and Reproduction, spoke on the value of experimental methods, believing that problems could be best solved by these means. He suggested the creation of a central bureau for experimental purposes. They knew that cruisers' reports on timber stands were sometimes simply ridiculous, and the industry had to get away from reports, merely guesses, made by cruisers who simply paddled along the edges of forests. Logging was now being carried out in the more inaccessible parts of the forests, costing more to work, and the companies were trying to buy lands in more accessible sections. They were now face to face with the growing scarcity of timber, and they had to think about the future supply. Dr. Howe's reports showed that the companies had been cutting smaller timber, each time. The logging industry had practically stood still; they were still logging as say in 1850. He urged the use of mechanical equipment for logging; they must in fact use equipment that would help to do the heavy labor in the woods. The companies must also use mechanical transport—and must also adopt means by which logs could be driven by smaller crews. This was a position that would have to be faced and the sooner the better. Referring to the use of balsam, Mr. Wilson stated that the Laurentide Co. were using up to 75 per cent. of that wood. The company were also trying out new tools, such a saw to be handled by one instead of by two, and was also experimenting with small tractors. He urged the importance of a central bureau, where experiments could be tried out; if the companies would pool their resources

W. G. Power, St. Pacome, Que.
Chairman of the Woodlands Section

Ellwood Wilson, Grand'Mere, Que.
Director of the Woodlands Section

Dr. J. S. Bates, Montreal
Superintendent, Forest Products Laboratories

it would be of mutual advantage. There could be no doubt that they were turning their forests into hardwood forests, and it would be very difficult to re-convert them into soft wood forests. There was a good outlet for these hardwoods, and he understood the British Government were requiring a very large quantity of birch logs for rotary cut veneers for aeroplanes. Hardwoods, too, would make excellent ground wood, up to 10 per cent. of the ground wood.

Mr. F. J. Campbell, of the Canada Paper Co., referred to cutting land in strips, and said that his company had met with fair success, the only objection being that it was liable to damage adjoining land from windfalls. His company had used balsam for ground wood.

After a few words from Messrs. C. A. Gardner, B. W. Buchanan, and S. P. Grogan on the subject of mixed forests, and the difficulty of transporting hard woods, Mr. R. O. Sweezy referred to the gradual suppression of conifers by hard woods. There was a likelihood of spruce being affected by disease like balsam had been affected. New Brunswick spruce, he understood, was suffering from an attack of the bud worm, and the disease seemed to be spreading West.

The Chairman stated that on the south shore of the St. Lawrence some timber had been attacked by the bark beetle, and although at first the dead wood was attacked, green spruce had been badly affected.

Are Hardwoods Supplementing Softwoods.

Mr. J. M. Dalton, St. Maurice Paper Co., Three Rivers, said that Dr. Howe was right in his statements that hardwoods were supplanting the soft woods. He supported the idea of an organization by which logging methods could be improved. He was afraid that the paper mills men did not appreciate the woods end of the business. There was not sufficient co-operation between the woods managers.

A short discussion on the employment of jobbers followed, Messrs. A. C. Volkmar, J. McLaurin, F. J. Campbell, T. F. Kenny, and C. A. Gardner taking part. It was remarked that jobbers were cheaper,

replied that he was not satisfied that the time was opportune to make a change.

Messrs. Ellwood Wilson, Volkmar and Grogan were appointed a committee to report to the technical section of the Association regarding the use of hardwoods and other woods not at present utilized in the production of pulp and paper. In this connection, Dr. Bates of the Forest Products Laboratories of Canada, Montreal, promised the co-operation of that institution. He hoped that the two sections of the association would work together, and mentioned that the laboratories had already done some investigation work on hard woods.

Mr. Clyde Leavitt, of the Conservation Commission, Ottawa, referred to the elimination of the white pine and spruce in our forests, leaving a certain amount of balsam, and making them virtually into hardwood forests. The Conservation Commission had been co-operating with the Riordon & Laurentide Companies for the past two years in conservation work, and also with the Quebec and New Brunswick Governments. The idea was to find out the factors which would determine the future of the forests, and how to improve the forests. The Commission were making a study of burnt over areas, and also the slash disposal question.

It was decided to hold the annual meeting of the section the day prior to the annual meeting of the parent association, early in February, and it is possible that the fire protective associations will also hold their meetings in Montreal at the same date.

A resolution was adopted expressing appreciation of the work of the Entomological Department at Ottawa, under Prof. Swayne, in investigating insect pests, and asking the Government to study the diseases caused by fungus in addition to insect pests.

Another resolution was also adopted, appointing the following committee to study improvements in logging and driving methods. Ellwood Wilson, J. M. Dalton, P. W. Buchanan, M. R. Kane and T. F. Kenny, with instructions to report at the annual meeting.

Those Present at the Sessions.

The following representatives of paper and lumber companies were present:

J. McLaurin, St. Maurice Paper Co.
